THE AMERICAN FLORIST.

VOLUME XIV.

August 6, 1898 to July 29, 1899.

CONTENTS.

Illustrations are indicated by an *

A

*Acalypha Sanderi 250
Adiantum, a good 1118
Adiantum house, a novel *936, 1458
Adiantums in rose house 199
Advertise, when to 1412
Advertisers' best medium 523
Advertising, the value of 1508
Albany, N. Y. 550
Alinite: the new soil bacteria 1453
*Allamanda, a double 790
Alliance, O 1209
Alternanthera pests 1364, 1436
*Amaryllis seedlings 1177
American Association of Nurserymen 1218, 1372
American Forestry Association 206
American Nurserymen's Protective Association 1372
American Park and Outdoor Art Association 1405, 1431
American Pomological Society, the 1218, 1516.
American Retail Nurserymen's Protective Association 1372
American Rose Society, prospectus of 1429
American Seed Trade Association. 738
Ammonia, phosphate of 732
Among eastern plantsmen 1313
Ampelopsis Veitchii 1340
*Anderson & Co., C. G., establishment of 340
Andover, Mass 1496
*Anguloa albo-magna 39
Anniversary, a happy 1206
Apples, nomenclature of hardy 178
Aquatics for florists 1118
*Aquatics as florists' flowers 1061
Aquatics, seasonable notes on 1381
Aquatics, winter treatment of 368
Araucarias, culture and propagation of 552
Are we retrograding? 796
Ardisia crenulata 604
*Arthur, J. C. 881
*Asmus, George 1118
Asparagus for cutting 1120
*Aspidium aerostichoides 1235
Aster blight 199
Aster disease, the 199, 1238
*Aster, Semple's 547
Azaleas and mats 912
Azaleas, potting 1340
Azaleas, summer treatment of 1382

B

*Baccharis halimifolia 640
Bacteria, relation to the nutrition of plants 1173
Baltimore, 288, 314, 342, 417, 458, 500, 568, 605, 731, 973, 1078, 1130, 1181, 1248, 1298.
Bangor, Me 1140
*Bay tree, a giant 312
Bedding and window box plants for the trade 790
Begonia cuttings 312
Begonia Gloire de Lorraine 666
—*As a basket plant 678
—*House of at W. W. Edgar's 791
*Begonia Gloire de Lorraine nana compacta 755
*Begonia incarnata improved 754
*Begonia Knowsleyana 253
Begonia Socotrana *755, 1482
Begonias drooping at joints 942
*Begonias, Rex 118
*Bell & Sons, establishment of 1433
Belleville, Ill 1448
Belmont, Cal 776
Benton Harbor, Mich 1460
*Bermuda, tree life in 1287
Birmingham, Ala 1052
Bismarck funeral designs 193
Block siding 1388
Bloomington, Ill 454, 1125, 1484
Bloomsburg, Pa 300
Blue lobelia, abuse of 376
Bone and ashes, applying to the soil 1182, 1238.
*Booklet, a dainty 602
Boston .. 7, 38, 94, 122, 146, 169, 197, 230, 257, 287, 315, 342, 369, 398, 437, 495, 524, 550, 579, 642, 654, 690, 720, 731, 759, 795, 822, 854, 885, 908, 940, 970, 1011, 1066, 1096, 1123, 1149, 1179, 1208, 1237, 1262, 1291, 1314, 1339, 1362, 1389, 1410, 1434, 1456, 1481, 1507.
Boston to Detroit 1482
Boston park notes 1146
Boulder, Colo 1470
Bouvardia Humboldtii grandiflora. 757
Brampton, Can 911
*Breitmeyer, Philip 818
Breitmeyer's chrysanthemum show 490
Bridgeton, N. J 531
Brockton, Mass 1042, 1222
Brockville, Ont 1444
Brooklyn, N. Y 1424
Buffalo .. 40, 178, 242, 274, 302, 316, 358, 460, 495, 525, 568, 614, 671, 703, 762, 802, 823, 866, 908, 941, 980, 1022, 1080, 1098, 1150, 1211, 1264, 1291, 1315, 1350, 1386, 1435, 1459, 1496, 1507.
Buffalo to Detroit 1388
Bulb growing in America 400
Bulb growing in the northwest 128
Bulb growing in the state of Washington 1357
Bulb prospects, the Holland 14, 100
Bulb report, the French 1322
Bulbs, American grown 289
Bulbs in America, cultivation of flowering 494
Bulbs for Easter 704
*Bulbs, the propagation of 698
*Burbank, Luther 284
Burlingame, Cal 954
Burnt turf 182, 343
Burpee's trial grounds 1488
Butte, Mont 78, 305, 356, 412
Buxus arborescens angustifolia. 1364

C

*Caladium, the 2
Caladiums and hydrangeas 604
Calanthes at Whittinsville, Mass. 757
*Calceolarias 1382
California notes 46, 1270, 1488
Calla culture 523
Callas, diseased 760
*Campanulas 1358
Camphor in the germination of seeds, influence of 1342
Canadian customs regulations 884
Canadian Horticultural Society, the 195
*Canna sports 574
Cannas at Cottage Gardens 436
Cannas, storing through the winter 379
Cannas in 1898 378, 625
Carlisle, Pa 1330
Carmody's eloquence 548

Illinois to Omaha.

In view of the excellent rate of fare now granted by the railroads, it is both hoped and anticipated that there will be a large attendance at the S A. F. convention. The Chicago, Milwaukee and St. Paul railroad has been selected as the route from Chicago to the convention city. The fare will be $14.75 for the round trip, and many of the eastern delegations will consolidate at Chicago for the trip west, leaving over this line August 15 at 6:15 p. m. Special cars have been secured, and berths will be reserved upon request, addressed to the undersigned, care of the AMERICAN FLORIST.

J. V. MERRION,
S. A. F. Vice-Pres. for Illinois.

Hybrid Wichuraiana Roses.

[Paper read before the Philadelphia Florists' Club on August 2 by W. A. Manda, South Orange, N. J.]

The introduction of the Rosa Wichuraiana has given us not only new and distinct habit, but a parent that has proven most potent in producing by hybridization the most startling result that may be expected by the most sanguine of hybridizers.

This species is a native of Asia and was first introduced into culture in recent years. Possessing extraordinary hardiness and freedom of growth, with luxuriant glossy foliage which is proof against insects, this species soon became a favorite and is extensively used in landscape work for covering ground, for which it is particularly adapted. It is surprising that this rose was not selected before to impart its distinct habit and good quality to other garden roses.

The result of the different crosses has been most gratifying, and has given us an entirely new race of roses known as the hybrid Wichuraiana. The first crosses, made without records, have given us roses that surpass the well known Crimson Rambler in every point, and last year four varieties were sent out which have become public favorites.

Manda's Triumph has, presumably, a white Noisette for its parent, and is considered the best of the four varieties. The growth is very strong; stems twelve to twenty feet long, foliage thick, leathery and glossy, lasting well into the winter. Flowers pure white, perfectly double, finely imbricated, two inches in diameter, produced in clusters of from ten to seventy-five flowers, and literally covering the plant; most useful for trailing on the ground, or as a climber for verandas, trees and similar purposes. This rose forces even better than the Crimson Rambler, and thus will be a grand companion to that variety as an Easter plant.

Universal Favorite, showing a trace of a hybrid perpetual, grows six to twelve feet long, not so prostrate as the former variety, but has even better foliage, with a bright surface. The stems branch freely while the flowers are produced in extraordinary profusion, in clusters of ten to fifteen each, measuring two to three inches in diameter, double and of a light pink color, very fragrant and, like Manda's Triumph, will make an excellent Easter plant and a fit companion. South Orange Perfection sends out perhaps the longest stems, twenty to twenty-five feet long, foliage thick and shining, while the flowers are produced in clusters, one to one and a half inches in diameter, perfectly double, forming a perfect minature rose, flesh color; it is best adapted as a pillar rose, or for covering ground.

Pink Roamer is evidently an offspring from sweetbriar. This variety makes growths from twenty to twenty-five feet in length. The foliage is distinct from the former three varieties and is of a light green color and thinner texture. The fragrant flowers are single, two inches in diameter, produced in large panicles all along the ripened stems. This is a very striking and beautiful variety used for almost any purpose.

By crossing Rosa Wichuraiana with greenhouse teas the result is astonishing, as the plants are not only hardy but retain their foliage during the winter. Thus a new race of evergreen roses has been added to our collection, and promises to be the beginning of a new and useful class.

Jersey Beauty, Perle des Jardins crossed with R. Wichuraiana, is a very vigorous grower, producing shoots fifteen to twenty-five feet in length clothed with large, bright leaves of strong texture and evergreen. The flowers are produced singly or several from the old shoots, literally covering the plant. The individual flowers are two and a half inches to three and a half inches in diameter, yellow in bud and soft yellow color when open, with a mass of bright yellow stamens, which give the flower a striking appearance. It continues in flower for over a month and is deliciously fragrant. This will prove a most valuable plant for pillars, covering ground or trees, and other landscape effects.

Evergreen Gem, Madame Hoste crossed with Wichuraiana, is a most remarkable plant, growing close to the ground, sending out branching growths twelve to twenty feet long clothed with finely cut foliage which is evergreen. The flowers are produced singly or several together, perfectly double, very fragrant and two and a half to three inches in diameter, creamy white when open. The buds are very pretty, of deep yellow hue. This plant has a grand future for any purpose, but especially for landscape architecture, while the buds and flowers equal many greenhouse roses.

Gardenia, Perle des Jardins crossed with R. Wichuraiana, is a grand garden plant. The stems are very strong, fifteen to twenty feet in length, with large foliage of evergreen habit. The flowers are produced mostly singly on long stems, and when in bud are hardly distinguishable from Perle des Jardins. They open three to three and a half inches in diameter and of soft yellow color, incurving towards evening, forming a flower very similar in shape and color to the cardenia, hence its name. This rose will be greatly

sought for cut flower purposes, as a pillar rose and as an Easter plant.

Besides these well tested varieties, I have a number of seedlings that will be heard from when they have been sufficiently tried and their merit established. These show that a distinct and marked improvement can be wrought by selecting totally distinct types of plants, instead of, in the usual way, using the same and exhausted blood, and trying to produce something new out of it. There are other species of roses that could be used to advantage and would give an unforseen result.

In selecting the flower for crossing it should be taken while in bud and the stamens cut out, so as to prevent any possibility of their being fertilized by their own pollen. This should be done in the evening and the crossing done during the midday, when the pollen is in good condition to insure success. It generally takes from four to six months for a seed pod to ripen. A seed pod will hold from ten to twenty-five seeds, which should be sown as soon as ripe, in the ordinary way as other seeds are sown. As soon as the seeds germinate, pot them off in small pots and give them the same treatment as would be given to any young roses. From the seedling stage it will take two or three years for their first flowering and they do not show as well then as they do the second year on the plants that have been grown from cuttings from the original plant. Then they show their proper habit, size and color of flower.

Hybridizing should be done only after careful selection of parent plants, and proper consideration given so as to best attain the improvement desired.

The Caladium.

The common caladiums of our greenhouses are mostly hybrids of C. bicolor, a Brazilian species introduced as long ago as 1775. They are very attractive plants and not so difficult of cultivation as is generally supposed. The splendid coloring of the foliage constitutes their chief charm; but even apart from this, they are exceedingly ornamental in general outline and habit. The combinations of color in the leaves are, however, endless and absolutely beyond description.

It was the custom formerly to give names to such varieties as possessed special merit, and this is still practiced to some extent; but the number of these has become so great in recent years that varietal names are no longer considered serviceable. There are many fine collections of these plants in various establishments throughout the country, and among the more noteworthy, I believe, are those in the conservatories of some of the Chicago parks. But their cultivation is by no means confined to public gardens. At least one private grower of Massachusetts has been very successful with C. argyrites, an extremely pretty dwarf species, and some florists have found the commoner sorts of much utility in decorative work.

A general assortment is grown here and in the embellishment of the conservatory, halls and rooms, and even for table work, we consider them simply indispensable. Well developed plants are most in demand here in June and in order to have them at their best so early in the season we find it necessary to start the tubers about the first week of February. The tubers, accordingly, are at that time turned out of the pots, divided and placed in shallow boxes containing a mixture of sphagnum and sand. The boxes are then placed on the hot water pipes, the sphagnum being kept constantly moist.

When the tubers are properly started, with roots about an inch in length, they are carefully taken from the boxes and potted, using pots in proportion to the size of the tubers and a compost of turfy loam, leaf mold, cow manure and sand, two parts loam to one part each of the other constituents, with a slight sprinkling of charcoal and a four-inch pot of bone meal to a bushel of the soil. The pots are then plunged in moss and given a brisk bottom heat, always preserving the moss in a moist state.

Under these conditions the pots will be half filled with roots in a short time, when the plants should be placed on a bench close to the glass in a night temperature of 65°, which may be increased by 8° or 10° during the day. The atmosphere of the house should be kept moist, and the daily use of the syringe on the plants will tend to promote a rapid and vigorous growth. When the pots are well filled with roots the plants may be moved to others of a larger size. Where large specimens are not needed stock of a more useful size may be grown in 6-inch or 7-inch pots. For table decoration we prefer plants grown in pans.

The final pots or pans being filled with roots, we apply a mulch of chopped sphagnum and bone meal, a four-inch pot of the bone to each bushel of moss. Liquid manure is also given about twice a week. The plants require a light shading during spring and summer, and abundance of water at the roots in warm weather. When thoroughly established they may be removed to the conservatory or show house. The colors are seen to the best advantage when the plants are grouped with ferns and palms. Some growers mass the different kinds all together, but we consider this arrangement too formal.

In autumn, when the leaves begin to fade, gradually withhold water until the leaves have died down. The plants in the pots may then be stowed away under the benches in a house where the temperature does not fall below 55°. The space underneath the benches of a rose house will suit them very well, but a house in which tropical plants are grown would be better. The tubers will be in good condition at potting time if they are given a little water occasionally throughout the fall and winter months. Plants required for late summer and autumn use may be started in April without the aid of bottom heat.

ROBERT SHORE.

Ithaca, N. Y.

The Springfield Sweet Pea Show.

Our annual sweet pea show was again held under the auspices of the Hampden County Horticultural Society and City Hall, our most commodious place of meeting, was chosen for the event.

We had the largest display of sweet peas ever brought together. The tables contained about 750 vases of this popular flower besides other seasonable products. It was largely an exhibition of the more recent introductions as all the novelties of 1897 and 1898 were there in fine bunches, with a number of trial sorts besides. The hot spell of two weeks ago had made us anxious, for our vines were forced rapidly into bloom, a condition that is usually followed by temporary exhaustion and requires both time and favorable weather to put them in prime condition again. Fortunately the week preceding the show was perfect, giving

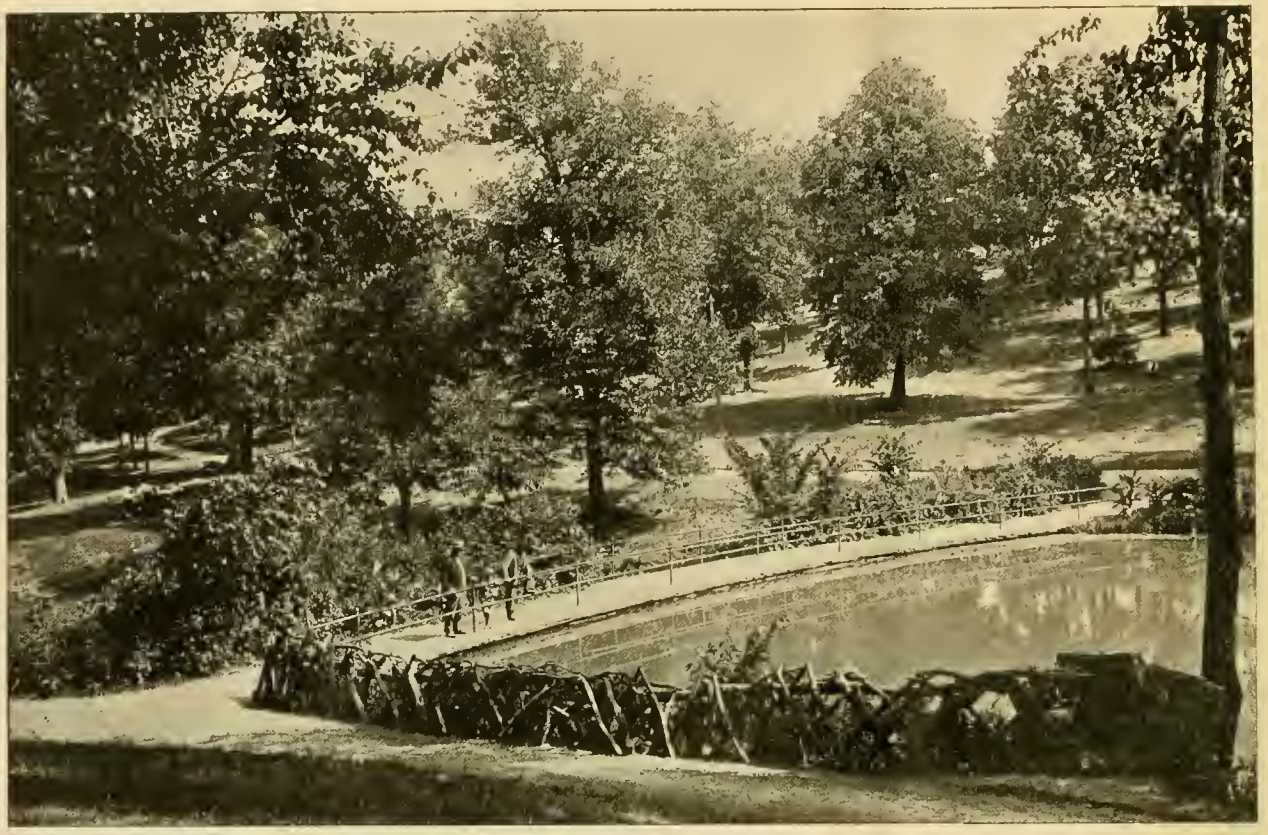
CALADIUM GROWN BY R. SHORE, ITHACA, N. Y.

us splendid flowers. My own vines rallied and were also brought through an attack of red spider, coming into fine bloom again just in time for the show. It is several years since I have entered any of the competing classes, my own preference being to table one good display that shall please the visitors. There are enough others to compete for the prizes. I notice that tables containing entries to specified classes have a disappointing effect on the average visitor, where only a few stems are required of each sort. The effect of lusty bunches of each color is far more satisfactory.

There were two fine entries for the Eckford Challenge Cup. This called for the seven latest Eckford novelties and never before have such large bunches been shown here, grown the first year from sealed packets. One of the bunches of Prince of Wales must have had a hundred stems, and they all ranged from thirty upwards. Sometimes we can show barely enough to distinguish them. W. J. Eldred was awarded the cup. Of the seven of the new Eckford set are Prince of Wales, a bright rose showing advance merit over Her Majesty; Lady Mary Currie and Chancellor, both splendid developments of the orange salmon order, the latter producing a percentage of blossoms identical with the Currie, perhaps half of them taking the decided orange which we expected from Mr. Eckford's description. Neither one of them comes up to the new trial sort of Burpee's, called Gorgeous, on color. The latter is worthy of the best certificate that can be given. Colonist, which I said in my last article was nearly like Prince of Wales, does decidedly differ and is soft lilac overlaid with bright rose. Duchess of Sutherland is a pearl white very softly suffused with light pink, but it seems to be identical with Burpee's Sensation. Duke of Sutherland, dark claret maroon with indigo wings, makes hardly as good a showing as the old Monarch and, like Shahzada, it is disappointing. Black Knight would be taken for high grade Stanley.

W. J. Eldred and C. M. Hartzell were the only ones who competed for the cup. Each will now have held it a year, and "the rubber" comes next summer, unless a third party enters the race, as it must be won twice to be permanently owned. Our schedule of prizes included thirty-four classes and, with the exception of one or two minor classes, entries were made in all. For the best collection not to include novelties of later than 1897, twenty-five stems each, F. A. Blake took the first prize with a fine table of well grown blossoms including thirty-three varieties. Mr. Blake also won first for the best thirty vases, twelve sprays each. Mrs. H. M. Olin was second. For fifty sprays of any named variety W. J. Eldred took first on a bunch of Lovely; H. H. Fisk, second, on Coquette. For the best white, fifty stems, first was taken by H. H. Fisk, on Blanche Burpee; second best white, Emily Henderson, was awarded to D. W. Brainerd. For best cream, Lottie Hutchins, first was awarded to W. J. Eldred. Best yellow, Golden Gleam, to H. H. Fisk; second best, also Golden Gleam, to W. J. Eldred. Best light pink, Prima Donna, to D. W. Brainerd; second best pink, same variety, to W. J. Eldred. Best rose, Royal Rose, to H. H. Fisk; second best, Her Majesty, to D. W. Brainerd. Best red, Mars, to D. W. Brainerd; second, also Mars, to W. J. Eldred. Best mauve, Dorothy Tennant, to Mrs. H. M. Olin; second, Burpee's New Countess, to H. W. Smith. Best varie-

A HYBRID CALADIUM.



gated, Aurora, H. H. Fisk; second, also Aurora, to D. W. Brainerd. Best twelve stems each of the society's official dozen, only second prize given, to A. H. Smith. Best display of the thirty-six best sorts recommended by the society, awarded to D. W. Brainerd. For display of new varieties, not listed before 1897, awarded to W. J. Eldred. Best variety not catalogued before 1898, Stella Morse. Best twelve stems with largest blossoms, Royal Rose, to H. H. Fisk. Twelve longest stems, mixed, to D. W. Brainerd. For best display of mixed varieties, H. H. Fisk. Best display for effect, with foliage, H. H. Fisk.

Of novelties for 1898, W. J. Eldred had the most complete collection, but the first prize was awarded to F. A. Blake, for quality of bunches. The Gale prize for the best twenty-five stems of twelve varieties was awarded, first to A. H. Smith, second to F. A. Blake. Best fifty stems of Mrs. S. T. Walker, to W. J. Eldred. Best pots of Pink Cupid, C. M. Hartzell. Best twenty-five stems of Sensation, W. J. Eldred, first; F. A. Blake, second. Best twenty-five stems Modesty, F. A. Blake, first; W. J. Eldred, second. Best twenty-five stems Oriental, F. A. Blake, first; Mrs. H. M. Olin, second. Best twenty-five stems, Lottie Hutchins, F. A. Blake, first; D. W. Brainerd, second. Best twenty-five stems Stella Morse, F. A. Blake, first; W. J. Eldred, second. Best and largest general display, first prize was taken by R. A. Houston with seventy-two vases; S. H. Howes also had seventy-two vases, and received second prize.

The judges were R. H. Smith and Rev. W. T. Hutchins. The latter made a display of sixty vases, mostly novelties, not entered for competition.

For popular effect, tables with a hundred vases at our shows two and three years ago were more attractive than the displays we now make. We have dropped about half the list of varieties, and are trying to keep up with the novelties. We used to get fine bunches of color from the old sorts and the effect was striking, but now we run so much to the lighter colors that the visitor hardly gets the sensational effect that was felt two years ago.

I am feeling greatly encouraged by the status of this flower this year. I have never had finer blossoms than now. The difficulties of growing have yielded to more intelligent treatment. The hot wave two weeks ago was disheartening, but I gave my vines a good dose of phosphate, and several thorough sprayings, and they came into fresh growth and beautiful new bloom, and are holding so now. The red spider will probably now be an annual visitor, and he will make short work of vines if they are neglected. For two years I had my ground so rich that by spraying for the spider I made a too rank growth of vines, but now I have my

VIEW IN HANSCOM PARK, OMAHA, NEB.

land down where it will bear lots of water without making rank growth.

I can now get safely by the first blight, that takes the vines when a few inches high. Firming the ground cures that. I have no trouble getting my vines into their first beautiful bloom. But I am puzzled by the vines dying as soon as they have yielded their first crop of blossoms. This does not happen to any extent with me on new ground, but on old ground, even with all painstaking, about one-half the vines have died this year after coming into bloom and I hear of people in other sections losing their vines after less than a fortnight of bloom. Our growers need to meet and discuss this matter. Whether the seed comes from England, California or Oregon this freak of dying just as soon as they get into their first bloom is common to all.

Mountain Park, a Holyoke resort, makes an annual sweet pea show one of it's attractions. C. M. Hartzell usually has charge of it, but for a few weeks he has been on the sick list, which accounts for his not being able to do better in the competition for the Eckford Cup. R. A. Houston had the leading display at the Mountain Park show.

We must now readjust the list of the best colors. The following I should give the leading places in their respective colors: White, Blanche Burpee; light pink, Prima Donna; lavender, New Countess; yellow, Golden Gleam; blood red, Salopian; buff cream, Stella Morse; bright rose, Prince of Wales; richest purple, Duke of Clarence; dark maroon, either Stanley or Black Knight; orange salmon, Oriental; light blue, Emily Eckford; dark blue, Sunset Co.'s A; buff pink, Venus; delicate suffusion of pink, almost white, Modesty; purple magenta, Captivation; rosy mauve, Dorothy Tennant. These are sixteen magnificent colors that come as near to self as we can get. Into this same rank I would put as the very best contrasted or blended colors: Pink and white, Blanche Ferry; cream and white, Coquette; reddish pink and cream, Emily Lynch; shades of light rose, Royal Rose; blue and white, Maid of Honor. There are two or three beautiful candidates for favor in the trial sorts sent out. There is a buff cream shading toward the edge with rose, also a deeper colored Venus, also the Mrs. S. T. Walker with rose tinge. The very cream of the variegated sorts now stand in this order with me: Cream with rosy flakings, Lottie Hutchins; orange pink stripes, Aurora; rose striped, Mrs. Chamberlain; white with soft pink flakings, Ramona; dark striped, Senator; blue striped, Wawona. The ox-blood stripes in grandiflora form do not hold yet, but the percentage that comes that way is fine. Both Gray and Pink Friar are excellent. Coronet is a decided acquisition in spite of its short stems. In the trial sorts are a white that gives a large percentage of doubles, also an intense red that does the same thing. There is something unique about striped Celestial. It seems just a little ahead of any lavender stripe.

I dare not name the list that I would discard. It cuts right into both English and American novelties, and in one lump cuts off fifty of the older sorts. I will not give my ground to them any more. I had hoped to go to California this summer to look over other new sorts which I am told are gems of beauty.

It is, indeed, a time of great interest for this flower. My mind has rallied from fear, and I am not only hopeful but confident we are to carry the beautiful sweet pea steadily forward to complete success.

Massachusetts. W. T. HUTCHINS.

Horticulture on Omaha's Midway.

Two months of exposition life have passed with their memories and trials, failures and successes. Sunshine and rain seem to know that they have a part to perform and greatly aid the gardeners in their efforts to get all things in shape for the florists who are coming soon. This is particularly noticeable when you see the beautiful and effective display upon entering the lower gates which admit you directly south of the handsome Horticultural Hall. Entering here and circling toward the right your first attention is given to the heavily planted oval which is the central floral feature of the lower end. Here coleus, cannas, roses and nicotianas vie with rich toned sumachs and feathery tamarax for supremacy. The whole bed is dotted here and there with beautiful and always decorative purple-leaved ricinus. In one part of the oval there is a marvelously rich canna, the J. C. Vaughan, with coppery yellow flowers of good size.

Proceeding north along the graveled walks we pass two long beds, the exhibits of Douglas county. These are beautiful with red and yellow Coleus Verschaffeltii and Golden Bedder with cannas in the center, surrounded with heliotrope. Most of the beds need careful trimming and until this is done no definite conclusions can be given as to real needs or merits.

Vaughan's Seed Store has a fine bed of cannas, varieties little known in this section. Other exhibits of the same firm are large rectangles filled with gladioli in full bloom and very handsome beds of velvety pansies.

Directly back of the Kansas state buildings an effective bit of planting is shown. In the center are mammoth sunflowers, surrounded with corn and other

common plants, the outer planting being that old time favorite the rose moss, or portulaca, in a two-foot band encircling the entire bed. Here, also, is found a charming bit of landscaping in the wooded dell near the Minnesota log house, the feature of the bluff tract. Large oaks and stately poplars are silhouetted against the deep blue sky and invite entrance to the bridle path through the jungled display of shrubs and tall growing annuals. If one could only catch a glimpse of spray from some wild cataract the picture would be complete.

As we continue onward up the hill from this minature ravine the shrubbery and plants are more thrifty, probably the result of earlier planting. All along may be seen the waving strips of tasseled maize, as attractive as an ornamental plant as it is useful as a food. Landscapist Ulrich seems to know the value of things near at hand and has used native shrubs and climbers with telling effect.

To our left we pass the little sod house, the typical dwelling of the prairie pioneer of thirty years ago and here is also the commodius Nebraska building bidding one and all a cordial welcome in true Nebraska style. It is hard to draw the line of hospitality between these two popular resorts. For in the official headquarters gracious hostesses and handsome women bid you thrice welcome and dear Mrs. Bowser, on the other hand, dispenses her delicious coffee and steaming hot gingerbread with a motherly grace which she alone possesses.

Next in line is the Illinois headquarters. Here we enter the annex and find ourselves again in the Court of Honor of '93. Here are large canvases illustrating the Columbian Exposition, with which the Omaha show is contrasted many times a day.

Near the Arch of Music some fine examples of carpet bedding are found. The massed planting directly behind the arch also adds greatly to the setting of this structure when seen from the viaduct beyond the plaza.

We at last come to the end of this side of the tract and enter the Japanese Tea Garden to order a cup of that refreshing decoction, brewed in true Japanese style. Passing through the queer gardens, over the miniature bridge spanning the tiny brook, stopping awhile to admire the Japanese goldfish in the funny little basin with its funnier fountain, we go out through the bamboo gates to the mall underneath the giant cottonwoods, cross the plaza where Phinney's Iowa State Band is giving its daily recitals, and, somewhat fatigued by our long tramp, we get aboard an electric carriage to be taken along the central drive down to Horticultural Hall and around to the right between the other state buildings. Now we pass the Nebraska Seed Co.'s sweet pea plantation and circle around Dreer's lily basin where the Victoria regia and nymphæas are blooming magnificently. To our left are rose shrubs from Siebrecht & Sons, to our right Davey's seedling cannas, while directly in front blazes of the the same scarlet flash above the name of Vaughan and, almost before we are aware, our flying trip is at an end.

A bit of color has been added to upper midway since the arrival of the picturesque Sioux warriors in full fighting regalia. These wild natives of the plains are worthy the consideration of all eastern tourists, for it will not be long before they, too, will be gone, as the once great flora of the west is rapidly going before the ploughshare of the prairie farmer.

HORTICULTURAL HALL NOTES.

Siebrecht & Sons' palm show attracts no little attention these hot days. This exhibit occupies the west end of the building and also the space assigned to Colorado directly opposite. Luxuriant palms from the tropics lift their arching sprays of green above banks of filmy fern and selaginellas heavily jeweled by pearly drops of water. There is freshness about these palms and the collection of stately bay trees from Holland lends a charm to the cool and airy arrangements.

B. F. Bell brought in some wonderfully pretty bunches of sweet peas for the Burpee display. Burpee's New Countess and Meteor are prime favorites. The Lovely, Senator, Duke of Clarence and Blanche Burpee are of the varieties now shown, while Royal Robe and Emily Eckford are first choice among the fifty varieties on display.

The sweet pea display of the Sunset Seed Co., of California, holds its own and has one advantage, that of being grown right here on the grounds. They show a grand strain of these popular favorites.

The verbena beds are one mass of red, white and blue.

"Dad" Erfling has eased a great many minds by placing labels in each of the lily tubs. Now we know all about the names and habitat of the rare aquatics.

Davey's smiling face reminds one of a lover of more beautiful things than those ugly, spiney and crooked cacti.

At the Hanscom Park greenhouses may be seen one of the finest sights a florist could wish for, an Allamanda Hendersonii in full bloom. A perfect bower of these lemon colored bells completely fills one end of the building and needs to be seen to be fully appreciated. J. H. H.

Carnations.

In addition to learning by experience how to handle carnations and how to grow them successfully indoors during the summer, Mr. Rohrer learned the defects of his houses and has since built an additional range on a much improved plan.

This set of houses is built on the ridge and furrow plan, but with no partitions between them, the gutters being supported by iron arches. The paths are under the gutters. They are built on a slight incline with stationary roofs and the usual ventilation.

This ventilation is, however, their principal point and is obtained by the last house being some seven feet higher than the first one, the ground sloping that much. This gives a circulation of air when the ventilators are all open that is simply impossible to obtain in houses built on the level or in houses that are divided by partitions.

These houses were emptied very early in the spring and were at once planted with good cuttings. This gave them a chance to make well established and strong plants before the hot weather came, which, coupled with the free circulation of air obtainable in these houses, makes the plants to-day better than those plants that have been growing out doors even under the most favorable conditions.

When the hot weather set in the west side of these houses was shaded and about the first of July they were given a mulch of especially prepared sheep manure mixed with some stable manure. They were properly watered and syringed and are today such plants as any grower would be proud of.

To any one who is building or rebuilding carnation houses and who has a plot of ground sloping toward the south or southeast this style of house is worthy of serious consideration. Possibly in the course of time we may get our carnations acclimated to indoor culture, just as roses are, but with this style of house we need not wait for that day to come.

There is one thing, however, absolutely necessary in this style of culture, and that is to have your stock for propagating separate and distinct, as carnations grown in this manner will, if propagated from for a few years in succession, run out and become worthless.

Carnations to be a success under this method of culture must be propagated early and grown along in pots until the houses are ready for them. They must never be pot bound and must never lack for anything in the way of food or water. February struck cuttings are none too early and January ones are better yet.

It might be well to add that Mr. Rohrer uses the solid bed system of growing carnations and to this is attributable much of his success with indoor culture, as the feeding roots are down in the cool ground and are not parboiled as they would be in a bench. They can also be watered more freely without danger of souring the soil and ruining the plants. In fact they do not take so much water in solid beds as they would on benches and, as we Lancaster florists have to pay 25 cents per thousand gallons for all the water we use, the quantity is something to be taken into consideration.

ALBERT M. HERR.

Cineraria Culture.

The cineraria is one of our most useful and ornamental greenhouse plants, and under good cultivation will pay well for the extra care. Seed of a good strain is the first and most important requisite. We generally make two sowings, the first about the 10th of July, the second about the 15th of August; if sown much earlier the hot weather is hard on them and they do not make such fine plants as when sown at the above times. The seed is sown in a fine mixture of soil, leaf mold and sand, covered slightly, then placed in a cool corner of the greenhouse and kept shaded from bright sunlight.

When they show their first character leaf we transplant into flats one inch apart, and on their development to such an extent that they become crowded, we pot them in 2½-inch pots, from those to 4-inch, giving good drainage and using good turfy soil, leaf mold and well rotted cow manure, with a good sprinkling of sand.

When transferred to 4-inch pots we plunge them in a well ventilated pit or frame shaded from the direct sunlight. The plants are grown in a frame as long as the weather will permit. When the pots are well filled with roots the plants should be shifted into the 5-inch or 6-inch sizes, in which they may be flowered, unless specimen or exhibition plants are desired, in which case they should be given plenty of drainage and a richer soil, potted on and finished in 9-inch pots. When the pots are well filled with roots give manure water once a week—not too strong at first, gradually increasing the strength as the plants become used to it.

As it is some risk to leave the plants in a frame after November we move them to a greenhouse which is kept at a night temperature of 40°, with a rise of 10° to 15° during the day. We syringe once daily until they show flower buds, which will be in January and February.

Give good ventilation, avoiding drafts and do not allow the plants to touch, so that there may be a good circulation of air around them. The greatest enemy of the cineraria is the greenfly, but by fumigating with nikoteen once a week we keep them clean. D. F. R.

New York.

BUSINESS AT A STANDSTILL.—HOT WEATHER AND INFERIOR STOCK.—LOSSES THROUGH DELAYS IN APPRAISER'S OFFICE.—CONCESSIONS TO IMPORTERS.—A "SLOPE" ROSE HOUSE.—PREPARATIONS FOR OMAHA.—FLATBUSH BOWLERS.

Business is now at low water mark. Stores are deserted as a rule, not only by buyers but by inmates, a solitary individual on guard being the only sign of life. Windows, refrigerators and counters are bare of any kind of cut flower stock or other evidences of business, excepting a few plants of the indestructible kinds, such as aspidistras, ficuses and Kentias, and the stillness and emptiness surrounding the lone watcher, are more suggestive of the undertaker's shop than the florists' establishment.

Among the wholesalers the same lassitude prevails, except in the first hour or two of the forenoon when the boxes arrive from the few growers who make it a point to keep up regular shipments all through the season, and an odd florist or two with a funeral order or a little beach trade appears on the scene and gets his little supply before the whole invoice is knocked down to John Weir or the Greeks. The hot weather which has been boiling humanity has had a similarly wilting effect on flowers in general and on roses especially, which are mostly of microscopic size and open countenance. Most in evidence just at present are the asters, which are being received in increasing quantity daily, but which are far from first quality as yet.

The custom now prevailing at the appraiser's office whereby imported goods must be taken to the public stores for examination has given considerable trouble lately in the case of plants and other perishable material, the delay resulting in more or less damage, especially in hot weather. Siebrecht & Son had an invoice of cycas leaves injured in this way, also a lot of dracæna canes, and made a prompt protest to the assistant appraiser of the tenth division. The appraiser represented that there are no facilities for properly examining goods on the wharf and claimed to be doing everything possible to expedite examination at the storehouse, but expressed a wish to accommodate importers where practicable in such special cases. He finally agreed to arrange for wharf examination provided Messrs. Siebrecht should give notice of arrival of goods and furnish the necessary labor.

Thorne & Co.'s new "slope" house at Flushing is completed and planted with 4600 Bridesmaids. This house, 60x150, is located on a steep hillside and has a continuous unbroken roof, with three rows of ventilators. It was built by Hitchings & Co., who also did the heating, two of their new No. 57 heaters being required. Mr. Thorne is very sanguine as to the practicability of this style house. It is certainly in good hands for the demonstration, as Mr. Williams, the foreman in charge, is recognized as one of the most careful and successful of rose growers. If the season's results are satisfactory another house of same style and equal size is contemplated.

All those in the vicinity of New York who intend to go to Omaha should not forget that Vice-President Wallace is planning a comfortable and enjoyable excursion party for that occasion and prompt application should be made to him for terms and other information relative to the journey. It is earnestly hoped that the representation from New York may be of creditable size and there is no doubt that the visit to the distant Nebraska metropolis will well repay those who make the effort.

Bowling still holds its place in the affections of the Flatbush contingent, notwithstanding the torrid weather, but there is some doubt about getting a full team from that locality for Omaha. Louis Schmutz's record of 148 in five frames last week is a hint of what the Flatbush boys might do if they could be prevailed upon to enter the ring this year.

J. J. Perkins will open in the commission business in a part of the store occupied by Koffman on West Twenty-ninth street.

W. C. Mansfield, of Lexington avenue, has just returned from a vacation at Liberty and is installing a new refrigerator in anticipation of a big season.

Visitors in town: O. J. Olson, St. Paul, Minn.; Herbert Spavin, Mt. Kisco, N. Y.

Philadelphia.

HOT WEATHER HAS AFFECTED BOTH STOCK AND TRADE.—BUSINESS FAIR FOR THE SEASON.—FLORISTS' CLUB LISTENS TO MR. MANDA.—CONVENTION MATTERS.—DISCUSSION ON HYBRIDIZATION.—REDUCED FARE TO OMAHA.—STOKE POGIS CRICKET PLAYERS.—NOTES.

The heat has been almost unbearable the past week and the considerable rain which has fallen has served to keep up a humidity which is not much short of a Turkish bath. It is excellent growing weather, however, and all outside stock is coming along finely.

Business is fair for the season, there being considerable funeral work with a consequent demand for white flowers of all kinds. Asters are now quite plentiful at from 50 cents to $1 per 100. They are mostly outside stock but seem to have escaped the bugs entirely as yet.

The new crop of Beauty roses is coming in from quite a few growers, but they are not much as yet; from 50 cents to $1.50 per doz. is the price. La France, Kaiserin and Meteors are the other favorites and sell from $2 to $5 per 100 as quality demands. Lily of the valley is fairly good and gladioli are to be had in quantity at from $2 to $4 per 100.

There was a very well attended meeting of the Florists' Club last Tuesday evening. Mr. Manda's paper on Wichuraiana hybrid roses was the attraction, together, possibly, with the nearness of the convention, which generally attracts members "on the fence," who make up their minds at the last moment, being influenced by the number going. This inducement, we are sorry to say, was rather discouraging than otherwise, as several who were supposed to have gotten down on the other side were found to be still poised on the rail and seemed likely to fall back. If there had been a shoot on the convention hill of side dishes probably some five or six more might have been counted on. These side events are decried by some, but do away with them entirely and those who travel from 1000 to 1500 miles to attend the convention from pure love of the business and a wholesouled desire to tell all they have learned the past year for the benefit of their fellow ornamental horticulturists, can be counted on the fingers of not a great many hands.

The "good times" feature of the convention is a most important factor; many prominent florists whose presence is desirable are as often attracted by the social as the business side, and the fact that they are going influences others who go solely for the fun there is in it, the convention being a mere incident, some not attending more than one or two sessions.

The subject for the next meeting will be the convention, and all those attending are expected to give a good account of themselves and the way they helped their western brothers run matters.

The paper by Mr. Manda was most excellent, and his success in hybridizing the Wichuraiana with other distinct species was most graphically told. He did not keep strictly to his notes, but went into smaller details that are always pleasant to the listener. The new roses were taken up one by one and described. At first he did not suppose they were hardy, but as they grew so luxuriantly he had no alternative but to leave them out of doors for lack of room and was delighted to find they were not only entirely hardy but evergreen. Evergreen Gem is a constant grower, making growth even during the winter months outside during favorable spells of mild weather.

A fact brought out during the discussion was the proportion of good varieties likely to be obtained by crossing distinct species. Four fine varieties were selected from only twelve seedlings. One seed pod yielded two promising kinds and another one. Mr. Manda said that it was a mistake to cross hybrids with hybrids and teas with teas and expect good results. Distinct species must be used. He thought the Cherokee rose offered a fine chance for the hybridizer as it was a strong grower and had a good, large single flower. He also thought it would be better than Manetti for grafting purposes. In answer to Mr. Herr he said that crossing greenhouse varieties of carnations with dianthus and other distinct species would bring good results and is quite worthy of an extended trial. One thing about the seedlings was that cuttings taken from them showed better results than the original plants and it was always best to give a variety such a trial before discarding it.

A vote of thanks was tendered the essayist for his excellent paper, which was given to the committee for publication.

Those desiring to go to the convention should purchase tickets from John Westcott and get the benefit of one fare for the round trip and other incidentals only to be had by going with his party. Tickets purchased from regular offices will cost a fare and one-third.

The employes of the Stoke Pogis nurseries and farms played three games of cricket on July 4 with teams representing the nurseries and farms which resulted in the nurserymen winning two games out of three. On last Tuesday afternoon another game was played the farmers winning from the nurserymen by three runs, so it was agreed by the captains to play it off with a one inning game. The nurserymen made forty-five runs, the farmers twenty-five, the former with five wickets to fall when the game was called on account of the rain. The final game will be played on Labor Day.

Pennock Brothers have set their bulk back six inches and have removed their stable from the rear and carried out their greenhouse the full depth of the lot, thus gaining valuable room. K.

THE AMERICAN FLORIST

Subscription $1.00 a Year. To Europe, $2.00.
Subscriptions accepted only from those in the trade.

Advertisements, 10 Cents a Line, Agate; $1.00 per inch. Cash with Order.

No Special Position Guaranteed.

Discounts, 6 times, 5 per cent; 13 times, 10 per cent; 26 times, 20 per cent; 52 times, 30 per cent.

The Advertising Department of the AMERICAN FLORIST is for Florists, Seedsmen, and dealers in wares pertaining to those lines ONLY.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Wednesday to secure insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

The Convention.

The fourteenth annual meeting of the Society of American Florists will be held at Omaha, Neb., August 16 to 19, inclusive. The secretary, Wm. J. Stewart, 67 Bromfield street, Boston, Mass., will receive the annual dues in advance of the meeting and forward the 1898 badge by mail. S. B. Stewart, 119 North Sixteenth street, Omaha, is in charge of the trade exhibition, and will supply prospective exhibitors with all necessary information.

On to Omaha.

The efforts of the AMERICAN FLORIST have at last resulted in a reduction in the rate of railroad fare to the S. A. F. convention. The Western Passenger Association has authorized a rate of one fare for the round trip plus $2, or $14.75 from Chicago, and $13.50 from St. Louis. In territory within 150 miles of Omaha a rate of one fare will obtain. In territory between Chicago, Buffalo and Pittsburg the Central Passenger Association has conceded a rate of one and one-third fare for the round trip, upon the certificate plan.

The Chicago, Milwaukee & St. Paul railroad has been selected as the route from Chicago to Omaha, and the AMERICAN FLORIST is prepared to reserve for its friends berths in special Pullman palace cars leaving Chicago at 6:15 p. m., Monday, August 15, which will reach Omaha at 8:20 a. m. the following day.

Many of the eastern delegations will travel to Chicago over the Pennsylvania railroad upon the train leaving New York August 14 at 2 p. m., leaving Philadelphia at 4:30 p. m.; Washington, 3:30 p. m.; Harrisburg, 7:30 p. m.; Baltimore, 4:35 p. m.; arriving at Chicago at 5 p. m., at the same depot from which the Chicago, Milwaukee & St. Paul convention train will leave one hour and fifteen minutes later.

Eastern representatives are invited to join the Illinois party and should see that their tickets read "Via Chicago, Milwaukee & St. Paul railroad."

Railroad Rates to Omaha.

A rate of one and one-third fare for the round trip, on the certificate plan, has finally been secured from all points in the territory of the Central Passenger Association, which includes everything between Buffalo and Pittsburg on the east and Chicago and St. Louis on the west, and north of the Ohio River. It is possible that special delegations from this territory may be able to make even better rates now that this rate has been conceded, but the one and one-third fare concession is available to individuals on any and all lines under the jurisdiction of the Central Passenger Association.

WM. J. STEWART, Secretary.

THIEVES have been removing the small shade trees in one of Chicago's additions and have been selling them as nursery stock.

WITH the issue of July 30 the AMERICAN FLORIST completed its thirteenth volume, binders for which may be obtained upon application at seventy-five cents each.

THE annual Convention Number of the AMERICAN FLORIST will be issued upon August 13, and will be thoroughly in keeping with the spirit of progress which permeates the west. A word to the wise advertiser is sufficient.

CARL HAGENBURGER, of Mentor, Ohio, has sent us a sample of his Coleus Klondike. It is quite attractive, the leaves being reddish purple at the base, the venation purple with a creamy white area in the center and large portions mottled green and yellow on either side.

WE are in receipt of the following from G. C. Watson, the Philadelphia seedsman: "A notice in the window of R. A. Stewart, Thirteenth and Walnut streets, reads—'Closed during the month of August. Will open September 1, 1898. Residence 743 North Forth-fourth street.' This is one way of relieving the boss of opening and closing the store in vacation time, which your versatile New York correspondent says is such a tax during the dog days."

Greenhouse Building.

Woodside, N. Y.—A. S. Burns, one plant house, 75 feet.

Cambridge, Mass.—Harvard Botanic Garden, range of conservatories.

North Beverly, Mass.—J. F. Potter, one greenhouse.

Glastonbury, Conn.—J. R. Morgan & Son, two commercial houses, each 20x90.

North Easton, Mass.—John McFarland, one commercial house.

Sharon, Pa.—M. I. O'Brien, one carnation house. Frank H. Buhl, range of commercial houses.

Detroit, Mich.—Frank Holznagle, two houses, each 20x200. C. A. Rackman, house 20x150. Chas. Warneke, fine show house.

Wilmington, Del.—W. H. Vance, two houses 20x100, one house 10x100.

San Francisco, Cal.—Domoto Bros., two houses each 22x100.

Omaha Hotels.

Following is a list of Omaha hotels convenient to the convention hall:

HOTEL.	CAPACITY.	AMERICAN PLAN.	EUROPEAN PLAN.
Iler Grand, 16th and Howard,			$1.00-1.50
The Millard, 13th and Douglas,	100	$3.00 up.	$1.50 up.
Arcade Hotel, 13th and Douglas,	100	$2.00	
Hotel Dellone, 14th and Capitol av	450	$2.00 up.	$1.00 up.
The New Mercer, 12th and Howard,	300	$2.00-2.50	$1.00-1.50
Hotel Barker, 13th and Jones,	100	$1.50	$1.00
The Midland, 16th and Chicago,	150	$1.50-2.00	$.50 1.00
Drexel Hotel, 16th and Webster,	100	$——	$.75 up.
Murray Hotel, 14th and Harney,	100	$2.50 up.	
Victoria Hotel, Dodge St. nr. 13th,	50	$1.50 up.	
Dodge European (gentlemen only), 101-111 So. 13th,	40		$1.00
Hotel Vendome, 414 So. 13th,	40	$1.00-1.50	
The Windsor, 10th and Jackson,	50	$2.00	
Hotel Garfield, 1515 Howard,	200		$.25 up.
The Brunswick, 16th and Jackson,	200	$2.00-3.00	$1.00 up.

Boston.

WEATHER HAS A DEPRESSING EFFECT UPON THE QUALITY OF STOCK.—BUSINESS IS VERY LIGHT.—SWEET PEAS ARE POOR.—ASTERS TAKE THE PLACE OF CARNATIONS.—HORTICULTURAL SOCIETY'S SHOW WAS SLIM.

Boston has had its full proportion of the sweltering weather which the entire country has endured during the past week. The excessive moisture and frequent heavy rains have done splendid service for the lawns, which never were greener, and for the trees, which are as fresh as in June, but the effect on most flowers valued by the florists has been anything but pleasing. Sweet peas have suffered especially. The petals of the best of them are thin and spotted and it takes but a few hours to put them in a decaying condition after being picked. Roses are exceedingly poor. It is fortunate for the wholesalers that this comes at a time when the demand is next to nothing, otherwise there would be some very spicy correspondence regarding the quality of the stock shipped to the autocrats of the sea side and the country resorts, who want winter quality goods, but at summer prices. Carnations are scarce, but they are not seriously missed, for their particular mission at this season of the year is to fill up funeral designs, and we have plenty of asters that take their place nicely.

The exhibition at Horticultural Hall last Sunday was noticeably slim for this season of the year. Perennial phloxes, antirrhinums and hardy lilies were the specialties provided for in the schedule, but of the lilies there were none and the others were but sparingly represented. The great exhibition of aquatic plants and flowers will take place on Saturday, August 20.

Chicago.

CONFIDENCE IN A GOOD FALL TRADE.—STOCK IS NOW NOT EQUAL TO THE DEMAND.—EXTRA GOOD SUMMER FLOWERS.—BEAUTIES AND THEIR PRICES.—ON TO OMAHA.—ECHOES OF THE BIG HAIL STORM.—JOTTINGS ABOUT THE CITY.

It has been many and many a day since Chicago wholesalers, commission men and retailers have been in as good spirits as now prevail. Every indication points to a fall trade which will eclipse the best records of previous years and every man in the business is confident that he will be declaring big dividends by spring.

The first part of the month which ended last week showed a smaller volume of business than the corresponding period of a year ago, but the latter part of July was better than the same period of 1897, so that the month averaged pretty well. This week trade has been excellent and the commission men have sold out early every morning; frequently they have not had one bloom left at nine o'clock. The supply has been somewhat under the ordinary in quantity, doubtless because the glut of June and early July, and its accompanying low prices, induced many growers to throw out the old plants somewhat earlier than usual.

The quality of the stock now in the market is a source of pleasure to both grower, wholesaler and retailer. Summer flowers are never the equal of winter stock but the blooms of the present season are, as a rule, considerably better than is usual. Carnations in particular are fine and away ahead of last year's crop.

Of course the carnations now being cut

are nearly all grown in the fields and are not nearly as good as those which will come on in October. However, it is seldom that so good whites and reds have been produced in the open air. The pink, particularly Scott, have a very fair color and of the whites, many growers speak well of the Kohinoor, which is producing unusually fine flowers this season. Every one regrets that this bloom comes variegated under glass. Doubtless one reason that the outside stock is good this year is that we have had few severe wind and rain storms to beat down the plants. Another reason is that the growers in general are doing better field cultivation.

Roses seem to be the flowers in greatest demand this season and the present cut is insufficient in pink and white to meet the call. Beauties sell faster than they grow and bring good prices. Some of the growers are still cutting from old plants and, while the stems are as long as could be wished, the blooms are somewhat faded and have lost their lasting quality. However, the stock of such blooms is quickly absorbed at from $2 to $2.50 per dozen, while new Beauties, scarcely more than buds, with stems from tweive to sixteen inches long, are not numerous enough to meet the demand at $1.50 per dozen. It is a good price for blooms of this quality.

The supply of roscs is increasing every day and in another month will be all that will be required for a very lively trade. This winter's cut of carnations is to be the biggest in the history of this market, but the fact that everything indicates blooms of extra quality seems to assure the consumption of the crop. The sweet pea cut is approaching its end, and the supply at present does not leave a great deal for the street fakirs. Asters are quite plentiful and, in common with other garden flowers, do not sell well.

There promises to be a good sized party for the Florists' Club's expedition to Milwaukee next Thursday, although a very large proportion of those who would like to participate will be prevented from doing so because a week-day was selected for the trip. The Virginia leaves at 9 a. m. and tickets for the voyage are 85 cents.

The reduction in the rate of railroad fare to Omaha has already resulted in the assurance of a good representation from this city. Interest has been created which will result in much good, both to the Chicagoans who attend and to the S. A. F. itself. A large local delegation will be joined by several parties from the east and will leave Chicago via the C., M. & St. P. at 6:15 p. m., August 15.

The H. M. Hooker Company reports that the last week has been exceptionally busy. Not in years has the demand for glass been as great as it has been since the big hail storm of July 28. Thousands of lights were broken in dwellings, factories and stores, but, as usual, the greenhouse men were the heaviest sufferers. Messrs. Weinhoeber and Vaughan, whose loss aggregates about 7,000 square feet, were insured in the Florists' Hail Association, but the Garfield Park Floral Company, which lost 13,000 feet, and Messrs. H. N. Burns, H. Schiller, H. F. Halle and Swain Nelson & Sons were uninsured. The Hinsdale Rose Company lost 2,000 feet and at Riverside at the Reissig establishment the storm made practically a clean sweep. Fortunately the hail did not strike north or south far enough to catch the numerous big plants at the city's edge. Had it done so the loss would have been very great as 16x22 single thick glass is now worth $3.45 a box, or nearly seven cents a square foot. At this rate Reinberg Bros. would have to pay $40,000 for the glass alone should their roof be destroyed.

J. A. Budlong is so well pleased with the success of his first three months' trial at selling his own cut of flowers that he regrets that he did not build an addition to his establishment this summer. If business continues, a range of eight houses will go up early in the spring.

Last Sunday night safe blowers attempted to rob W. W. Barnard & Co., but were detected. A score of police engaged in the hunt for the robbers but were unsuccessful. The loss was some damaged furniture and a few postage stamps.

E. E. Pieser, of Kennicott Bros. Co., has been spending the week at the Spring Lake hotel, Spring Lake, Mich.

Phil. Hauswirth will go to Indianapolis in the second week of September as a delegate to the annual national convention of the Improved Order of Red Men.

O P. Bassett continues to rusticate at Lake Delavan. He comes home each Saturday and rejoins his family on Monday. Mr. Washburn is expected home from Colorado in a few days.

E. E. Kennicott is enjoying himself upon the Pacific coast. A newsy letter from him appears in another column.

Joshua Brooks, an octogenarian and son of Samuel Brooks, the man who built the first greenhouse in Chicago, died July 26.

W. E. Lynch has returned from his outing in the east.

Recent callers were John Ellspermann and J. D. Carmody, Evansville, Ind.; Walter Mott, Philadelphia.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

Every paid subscriber to the AMERICAN FLORIST for the year 1898 is entitled to a five-line want adv. free to be used at any time during the year.

FOR RENT—Three greenhouses, 5,000 feet of glass, also two-story frame and brick basement residence, all situated near a number of large cemeteries, 3 blocks from R. R. station and 2 blocks from electric cars. Possession can be given at once. Address P G, 127 Wells St., Chicago.

CHICAGO LOTS FOR SALE!

One block from corner Lincoln avenue and Wellington street, a bunch of lots at $25 per front foot, sewer and water. Suitable for greenhouse purposes. JAMES ROOD, JR., Tel. Main 3868. Room 5. 154 Lake St., Chicago.

FOR SALE AT A BARGAIN.

Florist establishment of over 10,000 square feet of glass; splendid situation, 8 lots, 35 ft. front; water, gas and electric light on street; greenhouse, office and barn all newly built, with all conveniences; heated by steam. Centrally located in city of 18 000 population in State of Indiana. Competition none to speak of. Leading establishment in the city. Sickness cause of selling. Address INDIANA, care American Florist.

FOR SALE OR RENT

In suburb of Chicago. Six greenhouses (8,000 sq. ft. of glass) heated by hot water, well stocked with carnations, roses, violets and chrysanthemums, etc., and a good assortment of plants for a first-class retail business; city water; also cottage of six rooms, barn and sheds; on account of poor health I will sell the above with stock at a very low figure on easy terms, or rent for a term of years (with option of purchasing) to a responsible party. Address

X Y Z, care American Florist.

FOR SALE!

A florist establishment for sale consisting of 13,000 sq. ft. of glass, in good condition. Heated by steam; in the city limits, located in a city of 18,000 inhabitants on the Mississippi river in Iowa, with several acres of land and dwelling house; must sell soon on account of old age. For further particulars address

IOWA, care American Florist.

FOR SALE.

FIFTY HORSE POWER BOILER with front and fittings complete, F. O. B. $100.00. Is in first-class condition, in use only five years heating school at low pressure.....

Address **JOSEPH KIFT, West Chester, Pa.**

NOTICE

—OF—

STOCKHOLDERS' MEETING.

CHICAGO, July 16, 1898.

Stockholders of the American Florist Company:

You are hereby notified that the annual meeting of the Stockholders of the American Florist Company will be held in Hotel Dellone, Omaha, Neb., Thursday, August, 18, 1898, at 3 o'clock P. M., for the purpose of electing directors and officers for the ensuing term, and for the transaction of such other business as may come before the meeting.

J. C. VAUGHAN, Pres.
M. BARKER, Acting Sec'y.

Sharon, Pa.

The weather has been all that could be desired and carnations in the field are looking fine. If the same favorable weather continues the plants will be extra large by time for putting in the houses.

S. S. Skidelsky, of Philadelphia, who was a visitor last week, and Mr. Fischer, of New Castle, will open a commission house and general supply store in Pittsburg about September 15, and have our best wishes for success.

E. McConnell & Son have agreed to disagree and dissolved partnership, young Mr. McConnell taking a situation with August Krueger in Meadville, Pa. Mr. McConnell, senior, expects to put one or two new carnations on the market next spring, a white and one similar to Maud Dean, but much more prolific. He expects to bench from 12,000 to 15,000 carnations and sells exclusively at wholesale.

M. I. O'Brien is adding a new house to his establishment, which will contain about 15,000 feet. He will bench about 8,000 carnations.

John Murchie has about 11,000 feet of glass, of which 8,000 feet are devoted to carnations and the rest to general stock.

Chas. Heintz is to build one or two new houses to replace those burned a year or so ago.

Wm. J. Corlett, with Lord & Burnham, is erecting a range of houses for Frank H. Buhl consisting of palm, orchid, rose, two plant houses and propagating house. It will be a very complete and handy little establishment, and will be heated with hot water. Mr. Corlett says everything will be finished early in September. James Clelland is the gardener in charge.

Nearly all report having done a good business in the past season, and many are making preparations for building. John Murchie contemplates putting up two rose houses. Albert Williams will remodel and change his location. None can afford the time for Omaha.

ROZELLE.

CHICAGO TO OMAHA.

Take the Chicago, Milwaukee & St. Paul Railway. It is the best road and shortest line between the two cities. It has the most perfect track and the finest equipment. The sleeping cars are palaces, and the dining car service equal to the best hotels.

For the meeting of the Society of American Florists, the Chicago, Milwaukee & St. Paul Railway will sell tickets at one fare plus $2 00 ($14.75) Chicago to Omaha and return on August 14th and 15th. Tickets good to return to and including Aug. 25th.

A special solid Vestibuled Electric Lighted train will leave via Chicago, Milwaukee & St. Paul Railway from Union Depot at 6:15 p. m. on Monday, August 15th, on arrival of trains from Philadelphia, New York, Boston, Buffalo, Pittsburg, Cleveland, Toledo, Detroit and Milwaukee, arriving Omaha 8:20 a. m. Tuesday.

In purchasing through tickets from East of Chicago, see that they read over the Chicago, Milwaukee & St. Paul Railway from Chicago to Omaha.

Reservations can be made in sleeping cars and tickets purchased on application to H. E. Laing, City Passenger Agent, 95 Adams Street, Chicago.

ST. LOUIS, MO.—John Kennedy, employed by nurseryman G. W. Sallee, was drowned July 24, while swimming.

FREDONIA, N. Y.—Marvin Hubbard, of the T. S. Hubbard Nursery Co., was overcome by the heat July 29, but will recover.

A. P. SHIGLEY, of the Bunker Hill Nursery, Mankato, Minn., publishes an original advertisement in his local paper in which he calls attention to the fact that he has devoted thirty years to growing stock in his present location and that all his plants, trees and shrubs are thoroughly acclimated.

Omaha.

PLANS FOR THE ENTERTAINMENT OF VISITORS TO THE CONVENTION. — AN EXCURSION PERSONALLY CONDUCTED BY J. F. WILCOX.—THE BOWLER'S WEEKLY RECORD.

The entertainment committee has prepared a program to supplement that of the S. A. F. It will be in the line of pleasure seeking and will begin on Tuesday evening when the president's reception will be given with a mandolin and guitar orchestra as an accessory. The reception will be followed by a lecture on Russia, illustrated with stereopticon views, by Prof. F. W. Taylor.

On Wednesday J. F. Wilcox will take the visitors upon an excursion to Council Bluffs. It is Mr. Wilcox's intention to have cars on hand at Fourteenth and Douglas streets Omaha for his guests who are expected to board same for a trolley ride across the Missouri and through a very picturesque portion of Iowa to his extensive establishment on the east side of town. Cars will wait to convey guests to Fairmount Park, Council Bluffs, where Mr. Wilcox will provide for the wants of the inner man. After lunch visitors will be at liberty to go as they please, as there will be much to see.

The bowling contest for the Evans cup will begin at Krug Park at 2 p. m. Wednesday. Thursday evening will be devoted to a visit to Mr. Lininger's magnificent art gallery and Friday will be spent at the Trans-Mississippi Exposition.

Following is the bowling score made August 1:

	1st.	2d.	3d.	4th.	Av.
Hadkinson,..	160	150	155	146	153
Wilcox,.....	171	134	124	157	146
Swoboda,.....	101	154	151	164	142
Donaghue,Sr,	119	131	151	155	140
Henderson,...	138	171	120	116	136
Donaghue,Jr.	153	145	108	135	135
Shaw,.....	131	94	130	133	122
Zimmer,.....	111	98	124	146	120

Present indications point to Mr. Donaghue, Sr., being captain of bowling team. J. F. Wilcox is a close second. J. H. H.

San Francisco.

A MURDEROUS CHINAMAN CAUSES AN EXPLOSION WHICH WRECKS NURSERIES AND CAUSES A DEMAND FOR FUNERAL FLOWERS.— DOMOTO BROTHERS' ESTABLISHMENT.— A SPLENDID AURATUM.— THE MARKET.—PROSPECT OF AN OVER SUPPLY OF CARNATIONS.—SMILAX ONCE MORE PROFITABLE.

Last week a Chinaman in the fuse works at Melrose murdered a fellow countryman and then killed five deputy sheriffs in committing suicide by blowing up the powder house. The explosion broke a great deal of glass of the nurseries within a radius of two miles. The Blanding avenue nursery had about ten boxes broken; Domoto Bros., two miles away, about twenty boxes, and two or three other small nurseries suffered considerable loss.

I visited Domoto Bros. to find out what damage was done and looked over their stock. They make a specialty of Cycas revoluta and are this year forcing about 10,000 pounds. They have planted about 30,000 chrysanthemums and they are all in fine condition. They are grown in boxes and as soon as the chrysanthemums go by carnations are planted in the boxes. In this climate they do not have to be housed till along in November to have plenty of time to bring them into bloom by the holidays. Domoto Bros. had an auratum lily with forty-six flowers from our bulb, which they sold to Frank Pelicano, the well known florist on Kearney street. It attracted a great deal of attention. They have lately been putting in a heating plant and are now erecting two new houses, 22x100, with southern exposure. One house will be for palms and the other for chrysanthemums and carnations. With this addition they will have 30,000 feet of glass.

Cut flowers were pretty well used up this week, owing to the funerals of the five deputy sheriffs who were killed in the above mentioned explosion. They were given a public funeral and the floral work was sent from all quarters.

Scott and white carnations are exceedingly scarce. We are beginning to have warm weather and the roses and carnations are showing its effect, Portia coming small and spotted. From the number of growers that have gone into carnation culture I think there may be an over supply for next winter and spring. Smilax is being planted again by some growers, as good strings have sold for some time at from $10 to $12.50 per hundred. For the last few years it has been selling at $5 per hundred, and consequently a good many of the growers found it a non-paying crop. It can be grown here in a lath house, and the foliage is good till New Year's. G. N. T.

Detroit.

FLORISTS ORGANIZE A CLUB AND PLAN TO INVITE THE NATIONAL SOCIETY TO THEIR CITY NEXT YEAR.—BUILDING OPERATIONS ARE NUMEROUS.— GRASSHOPPERS ARE WORKING CONSIDERABLE DAMAGE.—NO CHRYSANTHEMUMS IN POTS THIS YEAR.

Frank Holznagle, of Highland Park, is building two new greenhouses each 20x200 feet. He has a very fine lot of carnations in the field but is having a fight with grasshoppers, which eat asters, roses, carnations and everything that lies in their way. He says that he will have to lift the carnations, and plant them inside to escape. Some of his chrysanthemums in pots are covered with netting for protection against the pests. Perhaps some of the readers of the AMERICAN FLORIST can give some welcome advice as to methods of stopping or poisoning them for if they last much longer the loss to the florists near this city will be quite serious.

Chrysanthemums here are planted and looking well. Pot plants are not grown in any quantity this season as our florists complain that they did not pay last year.

Considerable building is in progress in this vicinity. Chas. Warneke has bad plans drawn for a very fine show house with cut stone front and plate glass windows. Geo. A. Rackham has built one house 20x150. The frame and bars are up and painted and benches are in, leaving the glass out until fall. This house is planted with chrysanthemums and looks very fine. The plants are short but full of good, large foliage and promise well for fall cutting. His carnation houses are full of last winter's plants which are producing good salable stock with no signs of spider after all this hot weather.

Twenty of the Detroit florists met July 28 and formed a florists' club. Philip Breitmeyer was elected president; Bruno Schroeder, vice-president and Robt. Flowerday, secretary. A committee was appointed to solicit membership, and also to make an estimate of the expense and means of entertaining the Society of American Florists next year in this city. Every one seems to be in favor of inviting the society here and everything will be settled at the next meeting, prior to the departure of several of our members to Omaha.

The Municipal League met in this city this week and on Tuesday evening Belle Island park was illuminated for them, the banks of the lake being covered with electric lights in colors. We are proud of our park and when decorated as it was this week it is worth going a long way to see. It should be one of the attractions for the S. A. F. meeting. F.

Pittsburg.

BUSINESS AND CROP SITUATION.—WHOLESALE AND COMMISSION ESTABLISHMENTS GALORE.—TWO FIRMS PREPARE TO GO INTO BUSINESS.—SEMPLE'S GLADIOLI ARE SUPERLATIVE IN QUALITY.

There has been a marked improvement in the weather, several very greatly needed rains having fallen, and the outlook for the outdoor stock is vastly improved, although business is very quiet at present.

The question discussed at the last meeting of the club, the advisability of opening a cut flower commission house, has been settled this week in the affirmative. Fred Burki, the wholesale grower of Bellevue, T. P. Langhans, of Langhans & Co., and Will A. Clark, for years with Messrs Elliott & Ulam, have organized the Pittsburg Cut Flower Company, Limited. Mr. Burki is president, Mr. Langhans, secretary, and Mr. Clark, treasurer. On September 1 they will open a store at 705 Penn avenue, a very central location, easily reached both by the Allegheny and Pittsburg florists.

The present time seems to be thought propitious for starting commission flower houses here, as Mr. S. S. Skidelsky and one of the Fischer Bros., of New Castle, report they will open such an establishment about September 15. Several of our florists are very well pleased that we are at last to have a commission house, and some say two will be better for the trade than one. There is one element of success very prominent in the ventures, and that is the competency and ability in

the florist line of those who are undertaking them.

Mr. Langhans will retire from the firm of Langhans & Co.; the business will be carried on at the same stand, Allegheny Market, by the remaining partners, the Britenbaugh brothers, whose greenhouses are at Bennett.

James Semple, of Bellevue, is making a specialty of growing fine gladioli. The display at his stand in the Allegheny Market is a grand one; the majority of spikes of blooms are over six inches in width and eighteen inches in length. He is devoting the same painstaking care to their development and improvement that he does to his well known strain of asters, and with the same result, unusual excellence.

Mr. Henry D. Rohrer, Lancaster, Pa., was with us this week. REGIA.

Obituary.

The readers of the AMERICAN FLORIST will regret the death of Benjamin Borden Hance, which occurred in the early part of June at his former home near Red Bank, New Jersey.

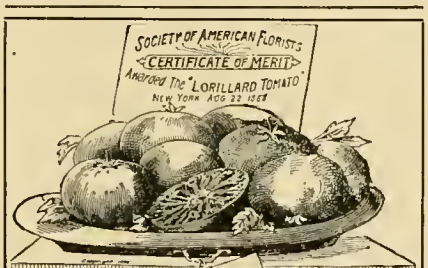
During the time that New York was a prominent candidate for the World's Fair Mr. Hance was active in preparing and beautifying Riverside Park as the hoped-for site. In 1893 he came to Chicago, and since then had been employed by the Pullman Company as horticulturist for the town of Pullman. He was a man universally loved for his sterling integrity and courteous bearing. By those in his profession he will be missed, as he was not only cheerful and ready to impart, but open to information in anything to advance his profession, and was a pleasing conversationalist. In his early life he was a prominent nurseryman in New Jersey, where he was widely known. He was of Quaker parentage and it was always his endeavor to practice the principles of the faith wherever duty called. Mr. Hance was taken with the grip in the early part of the year and never recovered. He was about 65 years of age. The remains were placed in a private cemetery at Rumson's Neck, near Red Bank, New Jersey.

Helpful Reminders.

Before repairing your benches see that the heating pipes are in order. You can get at them best now while the benches are unoccupied. Get the leaky joints all cleaned out first, then go over the pipes carefully with a level and see that they all rise a little from the boiler and that the supports are in good condition. If a joint does not fit snugly put in a heavy piece of rope or oakum first, and then pack it with iron chips, which will join two pipes together as one. When you have a lap of one inch, the chips must be of cast iron, not wrought, and must be clean, no oil on them. Get your roof in order thoroughly, not simply because a leaky roof is unpleasant and lets in cold at greater expense. Your stock suffers more than either you or your pocket book. You cannot control matters with a bad roof.

Asparagus will be blooming now and you should mark a few pieces with a ribbon to prevent its being cut so that you will get some seed. It is worth one cent a seed and will pay you to save it.

All your potted ferns should have their shift at once. The major portion of the fern business is with the very small plants used in pans, and too little care is taken of plants that become too large for that purpose. This is a great mistake as the larger specimens are the most beautiful and should be taken care of. Clean up every plant you have, give them good soil and moisture now and beware of chilly mornings, for condensation on the fronds is as bad for ferns as for roses. In shifting ferns, unlike most other plants, a quantity of dead stems and worthless roots are to be carefully pulled out. They require but little sun and strong draughts are a detriment.



It is now time to prepare your Harrisii bulbs for early blooming, but there has been so much said about Harrisii that anything additional would be more of a re-hash than a reminder. Do not discard or neglect the candidum lilies because they are not as much talked of as other flowers. A few of them well grown, with delicate blue larkspur are beautiful and are sure to come in conveniently.

You cannot afford to be without a bed of lily of the valley for bloom, and for furnishing clumps to customers. Beds that have become over crowded and impoverished should have a careful overhauling now. C. B. W.

Crimson Rambler Rose.

A specimen of above planted March, 1895, from a 4-inch pot and cut down to the ground at time of planting, had at the very lowest figure 11,750 flowers this season. There were six shoots six to eight feet long, after having one-third cut off last spring; 235 bunches in all with an average of at least fifty flowers to the bunch. The largest bunch bore 123 flowers. We always cut back our plant as soon as its beauty is over, taking off all the wood that produced flowers, and leaving as many new growths as we think advisable. We have ten running up now for flowering next season.

Massachusetts. R. N.

A Profitable Side Crop.

The tomato is one of the profitable side crops for the florist if properly handled. An important item in proper handling is to start right by getting proper seed. Experience has proven the "Lorillard" the best forcing variety so far; but much of the seed now on the market is not carefully selected as to type. I have taken pains to find something free from this objection and have pleasure in offering

Lorillard Forcing Tomato...

Specially saved for my trade by the originator, Mr. Jno. Gardner. Pkts., 25c. 50c and $1 00, free by mail. Bulk price on application.

Sutton's Best of All Forcing Tomato

Has done remarkably well with those who tried it the past season. I do not know how it is for outside, but it's a dandy for forcing; large, round, deep scarlet, very prolific. Pkt. 40c, mailed free. (No bulk of this to offer at present). Give this new sort a trial. Stamps accepted for small amounts.

THE SEED TRADE.

AMERICAN SEED TRADE ASSOCIATION.

EVERETT B. CLARK, Pres.; JOS. A. BOLGIANO, 1st Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

J. ENGLEMAN has retired from the Nebraska Seed Co.

E. W. BURT, of S. L. Allen & Co., is making a two months' trip to Europe.

S. Y. HAINES is making a visit to his old home in the south.

EUREKA, KAS.—James Curry shipped a car load of blue grass seed to New York on July 30.

FRANK FORD & SONS, of Ravenna, O., on August 1, changed the name of their concern to the Ford Seed Company.

ABIN WOOD, of Hawarden, Iowa, has gone on the road for his fifth season with L. L. May & Co., seedsmen, of St. Paul.

MINNEAPOLIS, MINN.—A. Currie, of Currie Bros., Milwaukee, is in the city and reports seed trade in general to be excellent.

GAINESVILLE, FLA.—P. F. Wilson has removed his seed store from the Pedrich & Smith building to a better location on the east side of the "square."

THE Landreth Seed Company picked over 3000 bushels of peas from a forty acre tract at Sheboygan, Wis., July 29. The pea season in that vicinity was short this year because of the lack of rain.

S. L. ALLEN and H. M. Claire, of the Planet., Jr., concern, lately returned from a six weeks' trip to California. Mr. Claire reports that although the excessive drought which has prevailed on the coast this season has greatly damaged the present crop of sugar beet, this industry is without doubt a growing and important one.

Holland Bulb Prospects.

Late advices from Holland confirm reports published some time ago in regard to the bulb crop in that country during this season. The "Verzendersbond," an association of twenty-one of the leading growers, issue a circular as follows: "Owing to an abnormally mild winter, followed by severe spring frosts and cold winds, the hyacinth crop has suffered much, and the percentage of large bulbs in these will be very small. Tulips and narcissi will be of about medium size, these not having suffered so much as hyacinths."

Nebraska Crop Report.

The prospects for a crop of vine seeds this year are very fair. Early in June we had too much rain, both the Elkhorn and Platte rivers overflowing their banks to a limited extent, damaging a few odd crops. Since that time there has been practically no rain until Friday morning, July 29, when we had a nice shower.

Melons have made a very fair growth and appear to be well set with fruit; the stand of watermelons, however, is rather light. Cucumbers are doing well, and with the recent rain will probably commence setting fruits at once. Squash have been damaged somewhat, the large black squash beetle having injured some crops, but thus far are not so bad as last year. The seed corn crops, especially the sweet varieties, are injured to quite an extent, and will be at least one-third short of an average crop; as some land dried worse than other, it will affect some crops seriously. Field corn stands more dry weather than sweet corn and is not injured as much, but the best farmers here estimate their yield as being cut short at least ten bushels to the acre. The recent rain will help late crops, and perhaps give a full yield, but nearly all crops were just shooting out ears during the dry weather, and all such crops will be cut down.

California Crop Report.

The onion crop is now being harvested in this section and the shortage is keenly realized by the various growers, as the continued drought and extreme heat of the past two weeks caused 45% of the onion stalks to fall to the ground. The seed gathered from these stalks will be very light and will show a low growth, if any. I might say in this particular, the seed from the crop of 1897 or even the crop of 1896 will be superior in germination to the seed from the crop of 1898. I stated in your paper over my signature that onions would produce an average of 150 pounds per acre in this state, but the conditions have so changed since I made this statement that it is now too high and will not average 100 pounds per acre. I am not reporting on any one crop, but on the conditions that exist over the entire seed district, though some will harvest 500 pounds per acre. The acreage is not over 30% of the amount usually planted. In conversation with the second largest grower on the coast, July 29, he authorized me to say that the condition of crops had changed so materially for the worse that he would be unable to fill his 1898 contracts over 25%, with the possibility of a further reduction to 15%, and would so write his customers the coming week. There are other shortages of onion seed existing among the growers of 1898 crops that will be reported soon to the eastern trade. A conservative grower claims the general shortage to be fully 200,000 pounds of onion seed, standard varieties.

The celery crop is about a failure; some seed is carried over by the larger growers. Lettuce, poorer than in years; small acreage. Spinach did not pay for the rental of ground and cost of harvesting. Carrot is very short, not over 25% of average crop; many roots rotted. Salsify, only fair amount harvested. Very little parsnip planted here this season. Radish about destroyed. There are several large tracts of sugar beet here this year, grown for the sugar factories, experimental purposes and for comparison with French and German seed. From recent tests some complaint is made about the vitality of California seed. The crops look well, considering the year, and if California could overcome the German and French laborer at 40 cents per day, the growing of sugar beet seed would be a large feature of the industry here; but with *no duty* California has but one advantage over the German and French farmers, viz., the freight, which amounts to less than one cent per pound.

Sweet peas have been a losing crop for the legitimate grower; a few stray lots produced by farmers may have paid where no work or expense was incurred in rogueing the crop. Burpee's New Pink Cupid is a gem and will be a taking novelty and give excellent satisfaction to the retail buyer. The flowers are large and the plants remain in blossom very late compared with the taller sorts. Other seeds are in limited amounts only.

A large eastern dealer has quite an acreage of pole beans here that are being irrigated, but in my judgment they will not make a crop.

CHARLES P. BRASLAN.

Santa Clara, August 1, 1898.

The American Florist Company's New Directory.

The best novel feature of the latest edition of the American Florist Company's new directory is the alphabetical list of all persons in the floral, seed and nursery trades of the United States and Canada. All names are still preserved under states and towns, as in the earlier issues of the book, and it contains the usual array of miscellaneous information invariably associated with directories and reference books. The price of the book in stiff covers is $2.00; in flexible leather binding, $3.00.

Before Thursday Noon...

ADVERTISEMENTS for the annual Convention Number of the American Florist should reach this office before noon on Thursday, August 11, to insure good display.

The Omaha Number will eclipse all previous special issues of the American Florist both in the value of its special features, its typographical excellence, its circulation and its business bringing power.

The Advertising Rates for this issue will not be increased. $1 will buy an inch, $10 will buy a column and $30 will buy a page. Those who are advertising on time contracts will receive the contract discount upon increased space.

You'd Better Hustle

New Orleans.

THE CRESCENT CITY EXPERIENCES A DULL SEASON.—GOOD PROSPECTS WHEN THE NORTHERN PEOPLE BEGIN TO ARRIVE.—THE HORTICULTURAL SOCIETY ELECTS OFFICERS AND CELEBRATES ITS ANNIVERSARY.

There is nothing selling at the various markets. It has been this way for several months, and the period of inactivity will probably continue until fall, when the local social life awakens with the advent of the northern pleasure seekers.

The New Orleans Horticultural Society at its last meeting elected the following officers: J. H. Menard, president; Emile Valdejo, vice-president; Dan Nensham, secretary; John Eblen, treasurer.

The society celebrated its anniversary by a picnic at Grand Isle, in the Gulf of Mexico. This would be the finest resort in the south were it not for the terrific hurricanes which have several times swept it. A portion of the isle is high and, although the soil is very sandy, is well adapted to the cultivation of early vegetables. It is kept fertile by using as a fertilizer the fish which are easily caught for this purpose. Cauliflower is the principal crop. The members who participated in this outing with their families were: C. W. Echling, Harry Papworth, Charles Eble, T. Desweit, Frank B. Faessel, C. R. Panther, Dan Nensham, John Eblen, Justin Decamus, Paul A. Cele, J. A. Shalk, Emile Valdejo, R. P. Steckler, M. M. Lapouyade and R. E. Simons. M. M. L.

Toledo, O.

Everyone has been very busy all summer in preparing for what we all believe will be an unusually good fall season. Trade has not been very brisk since spring bedding ended, but few of us have noticed the absence of customers, so fully occupied have we been in caring for our stock. There is very little transpiring here. No building is in progress, although nearly everyone is making some improvements in the nature of repairs. From present indications Toledo will not be represented at Omaha, although the reduced fare may attract some one at the last moment. We have passed through a very moist period, but despite the frequent rains carnations in the fields are in exceptionally good condition and, in fact, all young stock is in fine shape. E. A. H.

THE GARDENERS' AND FLORISTS' CLUB HOLDS ONE OF ITS MOST SUCCESSFUL FLOWER SHOWS AND GIVES A PICNIC WHICH WAS A RECORD BREAKER IN ATTENDANCE AND IN PLEASURE.—PRIZE WINNERS.

The Montreal Gardeners' and Florists' Club gave one of the most succesful of its flower shows on July 25. The exhibits were more profuse and better grown than usual and the attendance was quite large. At the end of the evening the cut blooms were distributed among the hospitals. The judges awarded the premiums as follows:

Pansies, twenty-five mixed, first, Geo. Trussell, gardener to J. H. R. Molson; second, Geo. Cadman, gardener to A. A. Ayer; third, J. Stenning, gardener to W. Yuile. Fifty mixed, first, Geo. Trussell; second, W. Horobin, gardener to R. Reid.

Sweet peas, fifty mixed, first, J. Pidduck, gardener at Mount Royal Park; second, Geo. Trussell; third, W. Horobin. Twenty-five mixed, first, Fred Bennett, gardener to R. Mackay; second, W. Horobin; third, Geo. Trussell. Twelve mixed varieties, first, W. Horobin; second, J. Stenning. In the six classes for self colors, white, pink, red, yellow, purple and blue, and in the class for striped varieties, twenty-five blooms to a vase, J. Eddy, gardener to Mrs. Redpath, won first prizes.

Zinnias, twelve blooms, first, C. A. Smith, gardener to T. A. Dawes; second, Geo. Robinson, gardener to A. Joyce.

Marigolds, first, Geo. Robinson; second, Geo. Trussell and C. A. Smith, tie.

Dahlias, C. A. Smith first in four classes, J. Eddy first in one.

Salpiglossis, best twelve, Geo. Robinson, first; W. Whiting, gardener to Mr. Musson, second.

Gaillardias, Geo. Robinson, first; Geo. Trussell, second.

Phlox Drummondii, first, C. A. Smith; second, Geo. Trussell.

Verbenas, Geo. Robinson; double petunias, C. A. Smith; tuberous begonias; J. Stenning; mignonette, T. W. Bennett; exhibit carnations, W. Alcock; antirrhinum, Fred Bennett; perennial phlox, J. Pidduck; double hollyhocks, Geo. Trussell.

Cannas, six varieties, Geo. Robinson; three varieties, C. A. Smith.

Special premiums were awarded to Geo. Trussell for perennial peas and hardy roses, to J. Stenning for Vallotta purpurea, to H. Phillips for scabiosa and Heroine peas, to Fred Bennett for semi-double petunias and to C. A. Smith for Virgin thistle.

The club held its tenth annual picnic on Isle Grosbois July 28. Over 400 members and their friends were present, and it was an occasion of unusual pleasure. There was the customary picnic repast and programme of sports, embracing all lines of athletics from a cricket match to a foot race for five-year-old girls. The cricket match resulted in a victory for the Florists over the Gardeners by a score of 79 to 56. In the quoit contest W. Hazel was first, E. Edwards, second, and C. Clarke, third. In the race for members over forty years of age A. A. Kirby won, Geo. Trussell was second and H. Phillips, third. Frank Bennett defeated Robert Brimstone and the other members under forty.

WILLIAMSBURG, N. Y.—Henry Winfield, 27 years of age, who is a florist at 214 Bedford ave., was arrested for "scorching" on his bicycle. He gave the mounted police officer a lively chase before he was overhauled. He wore a suit of racing tights.

New Crop Pansy

VAUGHAN'S "International Mixture"

Received the only reward for Mixed Pansies at the World's Fair. It is today better and more complete than ever. It contains the cream of the stock of 10 Pansy specialists. There is no better mixture in existence, as all the florists who saw or used it can tell you. **Price, per oz., $10; 1-2 oz., $5; 1-8 oz., $1.50; trade pkt., 50 cts. (less 10 per cent for cash.)**

VAUGHAN'S "Giant Pansy Mixture"

This mixture is specially made up by us from all the separate colors of Giant Trimardeau, the Giant Bugnot and Cassier and several special strains which cannot be had in any other way. If your trade demands large flowers there is no better mixture. **Price, per oz., $4.00; 1-4 oz., $1.25; 1-8 oz., 70 cts.; large trade pkt., 50 cts.**

GIANT TRIMARDEAU. Mixed, oz., $1.00; ¼-oz., 30c; pkt., 10c.
"CHICAGO PARKS BEDDING" MIXTURE, oz., $1.00; ¼-oz., 30c.; pkt., 10c.
SEPARATE COLORS—For price of these see Special Pansy Seed Circular, sent on application.

We make SPECIAL MIXTURES for florists who have preferences in the composition and proportions of colors and types.

THE MARKET AND FANCY STRAINS are known by all the florists as the Standard Varieties up-to-date.

FRESH SEED NOW READY in trade packages at ONE DOLLAR each.

DENYS ZIRNGIEBEL, Needham, Mass.

Rochester, N. Y.

Though the July trade was generally complained of as being slow, several of our florists will now admit that total sales for the month compare most favorably with those of former years. At times it was found rather difficult to obtain certain grades of flowers on short notice, while ordinary stock and outdoor flowers were supplied very irregularly, being over-plenty and cheap for a few days and then again decidedly scarce and high priced. Some growers were unable to furnish a daily supply for which they had contracted; others were more fortunate and, though the quality was not up to the average, they demanded, and obtained most of the time, a good price for their goods. The recent copious rains have helped things along and a marked improvement in quality of flowers has been noticed for a few days past. Asters are now more plenty and sweet peas are longer in stem with fair sized flowers. Good gladioli are offered quite freely and tuberoses have not that yellowish faded appearance of a week ago.

Last week our florists were out in force to pay a long contemplated visit to Geo. Arnold's place, where sweet peas, asters, etc., are grown by the acre. Violets and hardy primroses are in prime condition in spite of the unfavorable weather; weekly stirring of the soil is of great help to the young plants in these days, Mr. Arnold says. The visitors, about three dozen in number, had a most enjoyable time and were royally entertained until late in the evening by the genial proprietor.

W. S. Keller and wife are home again after several months sojourn at Saranac lake in the Adirondack mountains. He tells several big fish stories and, as he has the reputation of being a very modest young man, we are inclined to believe almost half of what he relates. K.

SOMERVILLE, N. J.—John G. Schell has retired from the florist business for the present.

For Sale

500 LOADS OF PALM AND FERN FOOD. Made of clear manure. Like leaf mold. Elegant stuff; 4 years old, $1.00 per yard here; 50c. extra delivered on cars. (See how our Rubbers and Palms like it.)

The MODEL Extension Carnation Support

QUEENS, N. Y., Feb. 16, '97.
MR. THERON PARKER, Brooklyn, N. Y., Dear Sir:—I have tested your latest model Carnation Support and am free to say that I consider it the best wire carnation support that I have ever seen. It is quickly and easily applied, and I think will prove very durable, and you certainly deserve great credit for the invention.
Very truly yours,
C. W. WARD.

FLATBUSH, BROOKLYN, N. Y., Feb. 18, '97.
MR. THERON PARKER, Dear Sir:—Your wire stake is certainly a gem Without hesitating we indorse it as an up-to-date carnation support. Yours truly,
DAILLEDOUZE BROS.

W. HOBOKEN, N. J., Feb. 18, '97.
MR. THERON PARKER, Brooklyn, N. Y., Dear Sir:—It gives me much pleasure to congratulate you upon your success in getting up carnation supports. I think that those I have had from you are about as perfect as anybody will be able to make them They certainly fill my bill for an ideal carnation support, a thing I have been looking for for a long time. Wishing you every success in the sale of them, I am
Yours truly, E. ASMUS.

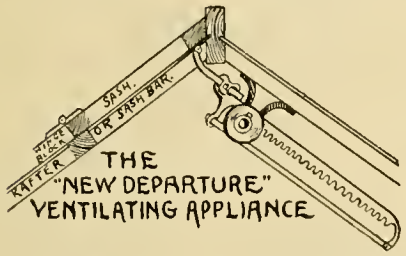
Portland, Ore.

After a most delightful trip winding around among and over the mountains, I reached Portland, Oregon. Of course one of the first things that I did after I had cleaned up a little was to visit the florists and nurserymen. On calling upon L. G. Pfunder I was received very cordially and conducted through his several greenhouses (he has 120,000 feet of glass), where he has everything which is grown in the east and a large and very fine collection of tropical plants. I find that Mr. Pfunder is thoroughly up to date and is a prosperous business man. His retail business is conducted by his daughter, a modest miss of twenty summers, who can make up a floral design as neatly as anyone.

Mr. Pfunder is always in search of the best method of doing each thing in connection with floriculture and is at present looking into the question of coal oil, its practicability as fuel and the apparatus used in heating therewith. He would be pleased to receive advice from those who have knowledge of the subject.



This a great country for growing flowers and fruit. The only thing left to be wished for is a few big cities to make a market for them. E. E. KENNICOTT.

GREENHOUSE WOODWORK.

Open-air-dried Cypress Lumber is more durable, and better suited to Greenhouse conditions, than kiln-dried stock. But you cannot get it from those that are engaged in the business in a small way—even though their entire business is confined to greenhouse material—for it takes a long time for the lumber to thoroughly dry and this means an investment in lumber that only those of large capital can make. The only way to have air-dried lumber is to buy green lumber and hold it until it dries. Those that order dry lumber from the producers of Cypress get kiln-dried stock. It is cheaper for them to kiln-dry than to hold the stock long enough to season it in the open air. We carry a large stock and fill all orders with open-air-dried Cypress clear of knots, sap and all other defects.

THE AMERICAN BEAUTY ROSE
AND ITS CULTURE.

How to grow the American Beauty so that it can be depended upon to produce good flowers all through the winter and enough of them to make its cultivation profitable is a problem which not a few growers have found difficult of solution. The men who make a success of this rose in a large way and follow this up regularly, year after year, might be enumerated on one's ten fingers; and they are seemingly as unable to specify the reasons for their success as their neighbors are to determine the cause of their own failure. The costly experience of many growers is that the American Beauty is a very uncertain and erratic rose. Instances might be given where growers have achieved notable success in Beauty culture for the first one or two seasons and, elated with bright anticipations born of the consciousness that they held the key to the whole subject and knew all about it, have trustfully faced another year, only to meet failure, partial or complete, and after repeated trials, fruitful in irregular and illogical results, they have finally been forced to abandon this fickle subject and devote their energies and their benches to something more tractable.

These facts possibly afford a reasonable explanation of the somewhat peculiar circumstance that, although the popularity of the American Beauty all over the country continues and shows no sign of abatement and that there are hundreds of florists who are anxious to grow them if they only could, yet it appears that during the present season many more Beauties have been propagated for the wholesale trade than could be disposed of, even at absurdly low figures. More than one thoughtful grower confesses to have almost reached the conclusion that American Beauty is not a rose that will respond to "rule of thumb" management and that, in the present knowledge of its constitution and requirements, its successful culture for cut flower purposes is largely a matter of chance, for that which was apparently proper and effective treatment one year proves totally inoperative the next. They find themselves wishing they had talked less about their accomplishments and ready to declare their conviction that the man who "goes it blind" is about as well off as the man who fetters himself with set rules and theories and loses half his sleep in reading thermometers at all hours of the night.

The above being a candid presentation of the sentiments of many growers, based upon experience, it is evident that in the present state of knowledge regarding the American Beauty, hard and fast rules of practice in its cultivation are not available. Necessarily the directions that follow are intended to be general rather than specific. We have aimed to give the consensus or average of judgment of a number of growers on vital points, rather than the experience or practice of a single individual in matters of small detail which would be of little service and possibly disastrous for anyone else to try to follow literally. It is taken for granted that the grower, ambitious to make a success with the Beauty, starts with some general experience in rose growing; that he knows the necessity of suitable soil and scrupulous cleanliness about the houses and of sweet pure air and even temperature in dealing with all roses; the fatal effects of sudden changes in temperature, of cold draughts and of condensed moisture on the foliage; that syringing should only be done early in the day and in bright sunny weather and that when the temperature is at its night maximum, a little fire is beneficial even if the ventilators must be kept slightly open. He realizes that with mildew, greenfly or red spider "an ounce of prevention is worth a pound of cure" and that no rose grower with any regard for his reputation will permit any of these preventable pests to get a foothold in his premises and, further, that this applies as forcibly to the stock in the propagating house and in pots as to that which is planted out. If he has not learned all these essentials and lacks a clear conception of the broad fundamental requirements in up-to-date commercial rose growing, let him understand that the American Beauty will take less abuse than any of the popular winter varieties; that it is one of the most difficult subjects an inexperienced grower can tackle and that, from a market standpoint, if it is not very well done, it is very badly done If the beginner is wise, he will not "put all his eggs into one basket" but look for the necessary year's profit in the return from more easily managed varieties and prudently keep his American

Beauty experimenting well within the limits of his spare resources.

Good stock for planting out is the first requirement. Cuttings should be taken from healthy plants and as good roots are essential the young plants should have frequent shifts and not be allowed to get pot bound at any time. Plant firm in good stiff rose soil with plenty of fibre, to which a small quantity of manure and bone meal have been added. Planting should be done early in July, setting the plants fifteen to sixteen inches apart in the rows with thirteen to fourteen inches space between the rows. It is useless to plant Beauties where they will have less than three feet of headroom; front benches, therefore, will be available for Bride, Mermet, or Morgan, either of which will do well in Beauty temperature. Galvanized iron stakes, with five feet of length above ground, and kept rigid at the top by a taut wire, are now in general use. Another taut, horizontal wire, still higher up, will be required later on for the tall shoots.

After planting out, the requirements of American Beauty through the summer are very simple. They should be syringed once a day to keep them in healthy growing condition and a light mulch of manure over the surface after planting is serviceable to keep the soil from drying out. All buds should be pinched out as soon as discerned, while they are still young and soft and not until late in September or October should they be allowed to mature. If allowed to crop heavily early the consequent exhaustion will render the plants more vulnerable to black spot. Between the second and third crop is the danger point for this pest and it is desirable to retard the second crop so that it does not come until after firing has begun. Fumigation will keep greenfly down during the summer but as soon as buds are allowed to remain for cutting the evaporation of tobacco liquid can be substituted. Evaporating should be done once a week and always in the morning. Sulphur and lime applied frequently to the hot pipes will take care of mildew. Sulphur should never be used on pipes that are liable to get extremely hot. A special pipe that does not run very hot should be reserved for this purpose, otherwise the buds are likely to have the ugly blue color which is so frequently seen and which spoils them for market purposes.

AMERICAN BEAUTY ROSES AT PETER REINBERG'S, SUMMERDALE, ILL., FIRST WEEK OF AUGUST.—PLANTED ABOUT MAY 1.—FIRST CUT EARLY IN JULY.

When in good healthy condition American Beauty grows rapidly and liberal feeding is required Beginning in January the plants should have an application of liquid manure regularly every two weeks, all through the season, until they are thrown out. To get good, strong wood, healthy growth and good flowers, keep the temperature down; 58° to 62° should be the maximum night temperature. With a higher temperature the shoots are apt to run up long and slender and when this begins, goodbye to flowers for a time. In different seasons the tendency to produce this so called blind wood varies greatly but its most fruitful cause is a high temperature. A vigorous, healthy shoot, if allowed to grow, should and naturally will, at some time develop a bud, but how to induce it to do this at any particular time or stage is a question that no one is able to answer satisfactorily, although there is no lack of theories. When a cane gets so long that it comes in contact with the glass, the proper course is to bend it to a horizontal position, low down close to the bed, run it along a sufficient distance and then start it off again on another perpendicular race. Sometimes a cane will run twenty or twenty-five feet before producing a flower, but the bending down process, by interrupting the flow of sap, tends to encourage the formation of a bud and also causes the growth of side shoots, which if low down, will give flowers with good stems but if produced up high will throw miserable short-stemmed stock. Not infrequently, however, conditions are just the opposite, the plants are not disposed to make wood and the blossoms are almost stemless. In such cases a little nitrate of soda or other quick fertilizer is recommended, to encourage the plants to start into active growth. This perverse disposition of the American Beauty as to growth is its most exasperating characteristic and at times it becomes a puzzle for the most expert of growers, but it is well to bear in mind that anything that tends to ripen the wood or interrupt the sap is favorable to the production of buds.

SIX-YEAR-OLD AMERICAN BEAUTY ROSES AT HERMAN BAUSKE'S, BOWMANVILLE, ILL., FIRST WEEK OF AUGUST.

Black spot is the most dreaded of all the troubles that make the Beauty grower's life a burden. Its appearance in the Beauty house is generally acknowledged to be a great misfortune, but one New York florist, with a record a few years ago as a successful Beauty grower, was bold enough to contend that black spot might be a blessing in disguise and advanced the theory that through the loss of the lower leaves, air and sunlight

were admitted to the densely shaded stems and soil, thus contributing to the plants' health. This gentleman maintains that one of the worst spot-infected houses he ever had gave him more and better flowers than were yielded by houses entirely free from the spot, but he does not succeed in getting other growers to agree as to his deductions.

Black spot is best prevented by a good circulation of air and abundant light. If the grower could afford the space to keep his plants far enough apart, the problem would be greatly simplified, but with the close planting necessitated by the present conditions of the business, it does not take long to get a dense forest of growth in which the most favorable conditions for the development of black spot are bound to exist, and when it makes its appearance it is a hard matter to prevent its rapid spread. Sudden changes in temperature, overwatering, a damp chill, moisture on the foliage at night, are among the most fruitful causes and impaired root action, while not a direct cause, is no doubt contributory to the black spot getting a foothold. The greatest period of danger is from now until the fires are kindled. Give all the air possible at mid-day. If the thermometer outside goes down to 64°, air should be taken off by 8 p. m., always, however, leaving a crack open to prevent condensation of moisture, for a rose house should never be closed up tight until after firing in the fall and even well up into October and no ventilating device that does this automatically can be considered safe.

With many experienced growers it is a rule to syringe once a week with copper and ammonia; not as a remedy but as a preventive and to keep black spot from spreading if it should make its appearance. One half pound of carbonate of copper dissolved in one gallon of ammonia of 26° strength and one gill of this solution added to a large canful of water is the formula used. On the young plants, also, either this solution or the Bordeaux mixture made with lime should be used regularly. Black spot simply cannot live where the Bordeaux mixture is, but it disfigures the foliage and consequently must not be used on roses when the plants get any size. It is hardly necessary to say that all affected leaves should be picked off and burned as soon as they appear.

Deformed buds, often on the most vigorous and healthy plants, are among the most discouraging features of the Beauty house. After having brought the plants to strong growth and promising buds only to see every bud come discolored, distorted and valueless is enough to try the patience of any one. Equal to black spot as a nuisance, and equally difficult to master, are the little thrips which cause this trouble. The insect, so minute as to be scarcely visible to the naked eye, gets in between the petals while the bud is yet very small, and it is next to impossible to get between them to dislodge or kill him. Fumigation sufficient to destroy him would also destroy the buds. Hot, dry weather is apt to bring him, and from July to October is especially a critical period. Houses should be thoroughly cleaned before the roses are planted out and frequent fumigation of the plants while they are young will also help to prevent the pest getting a lodgment. After fumigating, it is a good plan to syringe the plants and floors with whale oil soap to prevent the insects getting back again. Thrips are not confined to American Beauty, but do great damage on other varieties. Kaiserin Augusta is often attacked and much injury is sometimes done to forced hybrid perpetuals. Some recommend vaporizing with tobacco liquid. Persian insect powder was used in fumigation last summer by one of the largest New York growers who had suffered from thrips in past seasons and was apparently effectual, as he had no trouble with them afterward.

About cutting the blooms. When one grows roses for his own immediate use he can cut the flowers in condition as needed, but in establishments where the buds are grown for the wholesale market, uniformity is an important consideration, to attain which requires great skill, and the best rose is easily spoiled by bad judgment in cutting. In fact large growers assert that it is almost impossible to get workmen who can be depended upon to cut American Beauty right. Cutting must be done three or four times a day. In summer they must be carefully watched and cut very close as they fly open with wonderful suddenness. In winter the buds are cut just as the tips of the petals begin to separate and leave the pointed form. In large establishments the first cutting is made about 5:30 a. m.; the second about 10 a. m., and a third and fourth at noon and evening, the first two giving the largest yield. As soon as cut the buds are sorted as to length of stems and placed in jars of water of corresponding depth and set in a refrigerator or cool cellar. No water is allowed to touch the buds and crowding must be carefully avoided. In the morning they are separated into grades and packed in shallow boxes for market, while those that are too close are held over for twenty-four hours more. This grading, like cutting, is far from a simple operation. To do it well requires long practice, and to attain sufficient proficiency to suit the boss, the commission man and the buyer is an accomplishment that would hardly be attained in a lifetime as long as that of Methuselah. The retailer demands his buds close cut. In this he has two ends in view—the buds will last longer and if they appear small he sees an argument for a lower price; whereas the seller likes to have his blooms pretty well developed for reasons that are equally obvious.

In closing, a brief resume of some experiences of the past season will not be out of place. Last January, February and March it was the experience of many growers that Beauty, although growing well and

AMERICAN BEAUTY ROSES.

seemingly in the best of condition, yet produced but few flowers. Canes climbed to an unprecedented length and kept on climbing, and the bud, which in all well regulated American Beauties should have appeared on the end of the shoot, came not. The cause of this peculiarity was not apparent; there may have been something in the weather to cause it. One grower's product for the winter averaged two buds less per plant than in the previous season; the quality of the flower was, however, fully up to the average. A certain grower in commenting on these facts remarked very pertinently that a man cannot afford to grow six or eight yards of wood for the sake of one rose with a three-foot stem that may at some time in the indefinite future appear.

In a number of places the young stock rooted last winter showed much perversity after being put in pots and refused to grow. It simply stood still in the pots and again stood still for a month after planting out, then, suddenly, it went with a jump and has been growing vigorously ever since.

Some few growers in various sections have been very successful in holding over the old plants from year to year, but this is one of the many features of American Beauty culture decidedly in the experimental stage and not yet to be attempted on an extensive scale.

A PHILADELPHIA GROWER'S PRACTICE.

It is an open question to-day, I presume, as to which is the better style of house in which to grow American Beauty roses for winter blooming, some growers believing in one style, while others, equally as sanguine, believe in something different. There is more independence in respect to the style of house nowadays than was the case a few years ago. The plan mostly in operation in and near Philadelphia is that known as the hip roof, though there are some of the equal span style of greenhouses hereabout where excellent results have been obtained. I cannot recall an instance where the short span to the south house is in operation in or near this city for the purpose indicated. Bassett & Washburn, Hinsdale (near Chicago), had quite a number of that pattern erected in 1893 for the purpose under consideration, and they no doubt will gladly give the results of their experience along these lines, in comparison with those of equal span and the hip roof styles.

The equal span seems to offer better facilities for this tall growing rose than do houses wherein the head room is more circumscribed. There has been a difference of opinion expressed as to whether the long stemmed or the mediums and shorts pay the grower the best. Personally I am inclined to the belief that the long stemmed stock is the most profitable, that it would be far better for all concerned if stems of this favorite rose were not cut shorter than eighteen inches in length, and that it would be better still if two feet was the minimum length. This procedure would shorten the supply of inferior stock and give a better tone to that which is offered to the flower buyers in general. But this plan, of course, applies only to the growers who sell exclusively at wholesale, or who dispose of their stock through the commission merchant.

The soil we use is a clay loam, which suits American Beauty admirably. Our preparation of the soil used is, we think, about as economical as is possible. Sometimes we plow a part of the soil needed in the fall, before it becomes too wet; this is used for early planting, which is sometimes the following April and May. This year our first house was not planted until June 4. After plowing, the soil is harrowed thoroughly, going over it several times, after which about five hundred pounds pure ground bone and two to three barrels of wood ashes are spread as evenly as possible upon seven or eight furrows across the field, which is about three hundred feet wide; this is again thoroughly harrowed, in order to mix the materials as perfectly as possible. In three weeks or a month, if the soil is sufficiently dry, it is again plowed and left in rough ridges all winter, to be plowed down and worked again as soon as fit in the spring.

FLAT BOUQUET OF AMERICAN BEAUTY ROSES.

We have no set time in the spring when the plowing for our main supply of compost is done; we have used with good results soil that has only been plowed one month. The soil which is prepared by plowing in the spring for planting seems better for the purpose than that which has been plowed the preceding fall, though we cannot prove that it is. It contains more fibre and appears to have more "life," although sufficiently well rotted to use for all practical purposes. I once made a grand mistake in using soil for Meteors in which bone and wood ashes had been mixed only the day before. A chemical action takes place, I am told, when these two substances come in contact, which renders it unsafe for plants, especially if an overdose is given, until the chemical process has run its course, which appears to be in from three weeks to a month. The two causes combined resulted in the entire house having to be replanted, at least I have always blamed the combination of bone and wood ashes being used too soon after their application to the soil in which the planting was done, and possibly an overdose was given. It is difficult to determine just how much of the combination can be used with safety without comparative experiment, for soils differ greatly in the plant foods they contain.

To return to the preparation of the soil, sometimes we use stable manure and at other times we do not. Some of the very best American Beauties that have ever been seen here were grown in soil that did not contain a particle of stable manure. The plant foods having been worked into the soil, we allow it to remain for a time, when it is harrowed at intervals so as to keep it mellow and friable. After every rain the harrow is put to work as soon as it is sufficiently dry, so that there is no possibility of it becoming crusty. If it is carefully watched and full advantage taken of the elements the soil should be kept in condition to be used not longer than twenty-four hours after a heavy rain. We have thrown the outer furrows into the middle, and in that way piled the compost somewhat, but there does not appear to have been any advantage in this course.

FIG. I.—PICKING FLOWERS FOR PERFUMERY.

The time of planting is determined somewhat by the way the old plants are behaving and the condition of the young stock; if the old plants are comparatively free from red spider and black spot, and the number of flowers cut is profitable, we defer the planting as long as possible consistent with the probable well doing of the future crop. My experience leads me to the belief that good American Beauty flowers sell to better advantage in June from old plants than do those of the new crop cut from young plants in August and September. Every person is guided altogether by his own particular business when he commences to cut. It takes a lot of moral courage for a florist who retails his own crop to sacrifice buds by pinching them off and throwing them away in summer, especially when he can realize $2 50 or $3 per dozen for them, and the grower who sells his crop exclusively at wholesale blames him not for such action.

Flowers may be and have been cut from stock that has been planted two months, or to be more explicit, healthy plants in 4-inch pots planted the first week in June may yield a moderate cutting the first week in August. American Beauties are generally too plentiful in Philadelphia during the chrysanthemum season and for some weeks prior to that time. Plants may be benched as late as October 15 and give excellent results. Last year the writer sold to a private gardener some that were planted on date as above indicated from 4-inch pots, and so good were the results that the purchaser never tires talking about how well they succeeded. In my own experience we have planted as late as August 15 with satisfactory results. For a number of years the house which gave us the best results was planted the third day of July. They require abundance of water at the root at all times when growing freely.

The most important work in autumn consists of being careful that the watering and syringing is done in such a way as to keep down red spider and yet to avoid black spot. These are, according to my experience and observation, the two greatest enemies of the American Beauty. Water, the bane of red spider, is a promoter of black spot; that is to say, if it is applied in unlimited quantities and at unseasonable times. In the dark days of winter we have to be very careful in syringing and watering, or black spot will almost surely appear, yet if we neglect watering and syringing the plants red spider will also just as assuredly flourish. Our night temperature ranges from 58° to 60°. We prefer the latter mark, thinking we get a better crop, more flowers, and the quality is practically as good in our soil as those grown in a lower temperature.

How best to dispose of the products of a house or houses devoted to American Beauties is yet an unsolved problem. In Philadelphia most of the flowers are sold direct to the stores, most of the growers having their own salesmen. Whether this is the most profitable method cannot be answered. For the past year or so, speaking for myself, the product has been distributed through the commission house of S. S. Pennock, and so far it is more satisfactory than the plan formerly in use, viz., selling to the dealers through my own salesmen

In the propagation of American Beauty plants, the very best wood should in all cases be selected, whether the young plants are for sale or for our own use. They are not quite so easy to root as Meteors and the Mermet family, but we have on many occasions rooted ninety-five per cent, and we always find that, when we have what we call a good strike, the young plants resulting therefrom always render a good account of themselves. Why this is so I cannot explain unless it be that in order to succeed in having a good percentage of the cuttings take root all the natural requirements have been properly attended to. Judicious shading from direct sunshine and frequent sprinklings on bright days must be carefully followed, especially during the first week or so after the cuttings are put into the propagating sand. This rule also applies to the young plants after their first potting

Never allow the young plants to become stunted. Pot on before they become root bound or checked in any way, for when an American Beauty is retarded it requires some considerable time to outgrow that mismanagement It takes but a few days to ruin a nice batch of Beauties in 3-inch or smaller sized pots. If everything is not just ready to plant them into their winter quarters, it is better to give them a shift into the next sized pot, and in that way hold them in good condition until everything is prepared for planting.

The cutting of the flowers with generous stems is about all the pruning a thrifty plant in full growth can stand, though it is an advantage to remove all the weak straggling growth, taking care to make a clean cut clear from the base of the plant, leaving no short, scraggy pieces. EDWIN LONSDALE.

The Perfume Industry in the South of France.

In several of my previous letters I have given an idea of the importance of the floriculture of southern France for the production of cut flowers, but I have not referred to the enormous quantities of flowers that are required to supply the demand of the perfume factories. When we consider that the annual perfumery trade of France amounts to twenty millions of dollars, the importance of the flowers, its chief source, becomes evident. Our leading scientific paper, *La Nature*, in one of its recent numbers has given a very interesting article on the manufacture of perfumes, and with the permission of the publisher, I send the accompanying illustrations and hints about the leading operations in the making of the pomades an i odoriferous waters.

According to *La Nature* the extraction of the perfume is a most complicated art. The delicacy of the flowers, the feeble odor they emit, the enormous quantities to be treated and the rapidity with which the work has to be done easily explains the difficulties of the work. Other factors, too, come up for consideration. The fragrance of a flower varies according to the hour of the day—the hot air and the light may enhance momentarily the production of the scent or destroy it altogether if their duration is extended. Picked under the striking sun the flowers give off less odor than when cut in the early morning; their smell is sweeter on elevated, cool and wet soils than on dry, low lands exposed to the heat. All these

minute details, with complicated and delicate operations, compel the perfume manufacturer to serve a pretty long apprenticeship.

Our Department of the Alpes Maritimes (French Riviera) is a marvelous garden which holds up the supremacy of French perfumery; it is without contest the granary of all foreign perfumers. The beautiful city of Grasse, unique in the world as a floral center, has for several centuries sheltered this considerable, most interesting and picturesque agricultural industry. As the morning dawns and before the rays of the sun touch the flowers, sometimes even at midnight when a thunderstorm threatens, the flower pickers, women and children called together by a bugle horn, march to the fields to attend to their work, either roosted on the trees or bent down on the plants or bushes as shown in Fig. 1. Most of the pickers are Italians, the available national help not being sufficient at harvest time.

The picked flowers are put in bags, carried on donkeys to the factories, where young girls receive them, sort them (Fig. 2) and spread them on the floor of a cool workshop, from which they are afterwards taken by the manipulator. The paper then explains how some flowers give off their scent by the rapid and rough action of distillation, while others require a more delicate, slow and patient process in which the petals of the flowers are submitted to the physiological separating action of a dissolvent. The latter method compels us to face another difficulty which is found in separating the essential oil from the resins, tannins, impurities, etc., associated with it. Any dissolvent of the essence will in general carry off part of these matters; if, for instance, it is soluble in the aqueous liquids with which the tissues of the flowers are impregnated, it will also absorb the bad odors. On the other hand, if it is too active, it will kill the flower and prevent the development of the scent. A perfect separator ought therefore to be neutral, odorless, and of a character to attract the essence alone. Such an ideal separator is still to be found and in default of it the manufacturer must content himself with the dissolvent which up to the present date has given the best results, viz., grease, or a mixture of beef fat and lard which has been melted and prepared with the greatest care according to traditions handed down since the time of Dioscorides. The grease is sometimes replaced by perfectly pure olive or carefully refined oils.

The two leading methods in use with the perfume manufacturers are therefore the distillation and the dissolution; the latter when carried on by the hot method is called "maceration," and when conducted in a very thorough manner is known under the name of "enfleurage." Two flowers only, the orange and the rose may be treated by distillation. The process consists of throwing 100 quarts of water and 112 pounds of flowers into the still and heating it. The boiling water disorganizes the cells which imprison the essence and sets it free; the vapors are condensed in a refrigerator; the water and essence are collected in a Florentine receptacle where the difference of density separates them. The distillers of Grasse (Fig. 3) are admirably assisted in their work by Dame Nature, not only with respect to climate, but also as regards water supply, perfect distilling rooms, such as ancient caves, old crypts of monasteries, etc.

The process of "maceration" is applied to the violet, acacia, jonquil and sometimes to the rose and orange. In this case the grease is melted, by women, in deep tinned pans on water bath stoves; the flowers are thrown into them and by means of a spatula kept immersed at a temperature of about 150° Fahr. for half an hour, after which they are withdrawn, drained, and the amalgamated residuum, scalded by the boiling water, is put under a hydraulic press to carry off the last traces of fat or grease. But one maceration is not sufficient to perfume the grease, which after a single operation is hardly odorous. The workers must continue the process with fresh flowers until the grease has been saturated to a required strength. About ten pounds of flowers will perfume two pounds of grease and for some flowers the operation must be twenty-five times repeated.

The "enfleurage" (Fig. 4) is used for the jasmine and the tuberose. It is practiced in wooden frames about three feet long, twenty-five inches broad and from three to four inches deep, closed on the bottom by a sheet of glass. On the glass is spread a layer of grease with which the flowers are brought into direct contact. The frames are piled up to the number of forty, and the flowers being thus imprisoned between two frames, as in a closed, cool receptacle, develop their aroma under the best possible conditions. The next day these flowers are replaced by fresh ones and the operation continues until the perfume has acquired the necessary intensity. To manufacture the perfumed oils (huiles enfleurées), the sheets of glass on the bottom of the frames are replaced by a net work on which rest pieces of wool saturated with oil. The perfumed oil is collected through the pressure of all the pieces of wool. This process is very slow and for the jasmine lasts three months; it is besides very costly on account of the working material it requires. The smallest factory owns at least 4,000 frames and large manufacturers have 40,000 of them. A frame cannot hold more than one pound of grease and a piece of wool more than two pounds of oil.

It now remains to transform into extracts the pomades, etc, obtained by "maceration" or "enfleurage," and to accomplish this the various products are brought into contact with alcohol in receptacles which are violently agitated in alternating movements. The mixture

FIG. II.—SORTING FLOWERS IN A PERFUME FACTORY.

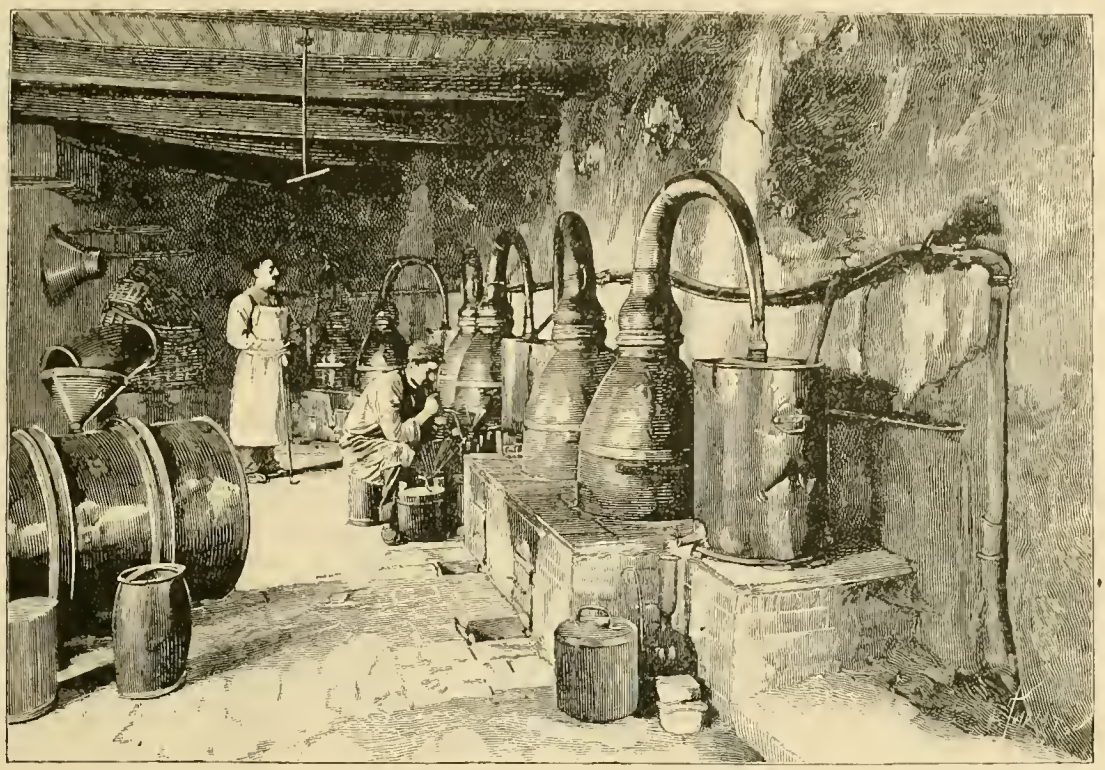

FIG. III.—THE PERFUME MAKER'S DISTILLERY.

is stirred until the alcohol has taken up all the perfume, and separation is then effected by means of decantation. The foregoing are the leading points in the manufacture of perfumes but to master all the difficulties requires constant care and attention and a thousand precautions and knacks which can only be acquired by actual experience.

In the Department of the Alpes Maritimes (Grasse, Cannes and the adjoining villages) the following quantities of flowers are manipulated:

2000 long tons of roses.
2500 long tons of orange.
200 long tons of jasmine.
150 long tons of acacia.
150 long tons of tuberoses.
200 long tons of violets.

In addition to these must be mentioned mignonette and jonquils, of which a good many tons (from twenty-five to thirty-five) are used up every year. The average price paid for one kilog. (two pounds three ounces) of flowers is as follows:

For the violet and acacia, 80 cents.
For the tuberose, 60 cents.
For the jasmine, 50 cents.
For the rose, 13 cents.
For the orange, 14 cents.

One violet plant will yield two-thirds of an ounce and one orange tree twenty-two pounds of flowers. A woman can pick in a morning, that is in four hours, about forty-four pounds of roses, seven pounds of jasmine, thirteen pounds of tuberoses, and in a whole day twenty-two pounds of violet or orange flowers. To produce one kilog. of essence (essential oil), one long ton, or about 1,200,000 orange flowers, are necessary. Sixteen tons of roses, or 5,000,000 flowers, will only provide one kilog. of essence. Five hundred long tons of pomades and perfumed oils and 4,000,000 litres (or quarts) of odoriferous waters valued, as first matters, at over $3,000,000 are annually manufactured in the south of France.

Notwithstanding the enormous quantities of perfume made from the flowers, modern chemical science produces a good many cheap artificial odors, which, as has been proven lately by a member of the Academy of Medicine, are not always harmless, on account of the noxious salts, nitrate of silver, bichloride of mercury, and acetate of lead, etc., entering into them. The honorable perfumer will therefore continue to resort to the inocuous floral extracts, which alone will enable him to prepare or compound, with the small number of flower odors heretofore alluded to, the many different perfumes demanded by his critical trade.

PARISIAN.

Noonday Reflections.

The relations between the florist and the general public are closer than that existing in any other branch of horticulture. This is natural. The florist is near to them. He is not above the level of any; he is a working man. He is in every town. Whether it be for a bouquet, a funeral or a wedding piece, the decoration of halls and dwelling houses for all sorts of occasions, or the laying out and planting of grounds, he must be consulted. The nurseryman proper never gets as near to the people, so that large quantities of his stock, shade and fruit trees, shrubs and herbaceous plants, are every season disposed of through the agency of the florist and the seedsman.

The communal attachment of gardeners and florists has always been very close. This fraternal feeling, for the most part, comes from their antecedents and previous training, and it is not surprising when one remembers that nearly all the first florists of the land were once private gardeners. They are always on visiting terms, and ever ready to exchange notes beneficial to each other. Considering also that there is still a wide field for enterprise, and that the successful florist needs an extensive acquaintance with cultivated plants and flowers of all kinds, even vegetables—for sometimes these become a profitable source of income—I would suggest that all young men who intend to become florists take private gardening as a part of their educational course. Florists' sons who go into business with their parents are especially at a disadvantage unless they take a course of study away from home. Further emphasis for this suggestion may be found among young men of any floral establishment. While the proprietor may have a latent fund of knowledge gained in other fields of horticulture, capable of development whenever the necessity calls for it, it is not so with his working force. They are held to a routine, which restricts their ability to growing but a few plants well. I only speak of this in a general way. Happily there are many exceptions. Specialists in floriculture seldom succeed by commencing as such.

It seems to me a florist on commencing business, even in a small way, should locate himself so as to get in touch with the community as speedily as possible. He should be competent and ever ready to discuss and advise in an intelligent manner on all subjects relating to his business, remembering that the whole field of horticulture lies within his domain; that it is not limited to the culture of roses, carnations, violets and chrysanthemums under glass, or to bedding stock, restricted mostly to geraniums, cannas and coleus. The seedsmen of the country advertise a "select" list of nursery stock. Leave seeds to the seedsmen, but all bulbs, roots, herbaceous plants, trees and shrubs should be supplied by the local florists, and a small but well ordered reserve ground should be full of such stock for inspection.

Florists who are accustomed to whole-

sale methods of cultivation do not take kindly to the pot plant trade. If the truth must be told, it takes more skill and perseverance to grow pot plants well, than cut flowers in benches. Here is where the private gardener's instincts come in. If there be a dollar to be made on pot plants be will not let the opportunity go by. Above all, one part of the business helps another. Pot plants will help to make customers for cut flowers, and vice versa.

The florist who builds an annex to his greenhouses where foliage plants and those in bloom can be effectively displayed and cut flowers kept handy, is worthy of the highest commendation. Galvin's Back Bay conservatories in Boston afford a fine example of this class of structure, though far too elaborate for the florist in general. There is a good practical suggestion here and it should be acted upon. The ready way in which the florists of the country work together for the common good, is a most gratifying feature of the business. "Union is strength" should not be their sole motto. While the spirit of investigation and discovery continues we should be ever ready to spread abroad whatever knowledge we possess for the benefit of all. The man who gives freely of his knowledge will never lose anything by it.

MONARDA.

Hardy Herbaceous Plants.

It seems strange that these very useful plants are not more generally grown by florists, especially such as afford good flowers for cutting. Perhaps one reason, if not the chief, is the general impression that spring is the only proper time for planting all herbaceous perennials. This is not the case, as a large proportion do much better if planted during the last of August and the whole of September; others if planted in October and first half of November. The spring here is so short as a rule, and the early flowering species and varieties start so quickly into growth, that quite often a season is lost by putting off planting till spring.

We have had great success in planting spring and early summer flowering plants during August and September; late summer and fall flowering plants in October and first half of November. There have been so many notes on herbaceous plants in these columns in which time of flowering and descriptions have been given that it only seems necessary to give lists of some of the plants we have successfully planted at the seasons named.

August and September—Achillea, aconitum, alyssum, anthemis, anthericum, aquilegia, arabis, campanula, centaurea, cerastium, Clematis erecta, coreopsis, delphinium, dianthus, dicentra, echinops, eryngium, gaillardia, geranium, gypsophila, Helenium Boulanderii, hemerocallis, iberis, iris, supinus, lychnis, Mertensia Virginica, monarda, myosotis, œnothera, papaver, pentstemon, phlox (spring flowering), primula, pyrethrum, ranunculus, sedum, Spiræa filipendula fl. pl. thymus, trollius, veronica and viola.

October and November—Aconitum autumnale, Asclepias tuberosa, aster, astilbe, boltenia, campunula (late flowering), eulalia, funkia, Helenium autumnale, helianthus, heliopsis, hibiscus, liatris, pæonies, Phlox decussata varieties, Phlox suffruticosa varieties, rudbeckia, spiræa, and many of those that will plant well in August and September,

Following are descriptions of some of our newest Phlox decussata varieties in bloom during the week ending July 30:

Coquelicot—Certainly one of the brightest, if not the brightest, phlox yet introduced; it was awarded a first class certificate of merit by the Royal Horticultural Society of England. Flowers of good size, bright salmon tinted with orange, several shades brighter than General Chanzy and Lothair.

Esperence—Large flower, pink, light center, solid rounded truss. Hardly bright enough.

Fernand Cortez—Catalogued as light bronze, very good, but one has to look very closely to see the bronze; large finely shaped flowers, dark pink with bronze tint toward the center. Trusses rounded and very full.

Lumineux—Large well formed flowers, clear bright pink, lighter towards center; solid rounded clusters. Somewhat like Le Soleil, but much brighter.

Mars-le-Tours — Beautifully formed flowers, bright carmine shaded to white, solid pyramidal truss. The most distinct of the set.

Parachute—Dwarf; crimson with light center, panicles much branched. Distinct in having the petals reflexed in the young flowers.

Rodin—Dwarf; well formed flowers, lavender and white; trusses much branched. Distinct but not very bright.

Evenement—Large well formed flowers, clear pink; good solid clusters.

Fantasie—White, marbled with purplish violet; rather dull and not distinct enough from many others.

Lord Rayleigh—Large well formed flowers, dark violet shading to blue. The nearest to blue yet introduced. Awarded first class certificate of merit by the Royal Horticultural Society of England.

Mme. Miolan-Carvalho—Very large flowers of good substance, creamy white, slightly feathered with pink.

The following varieties are some we imported from Scotland on account of their extra large panicles:

Bicolor—Flowers medium size, well formed, light salmon pink with large well defined bright crimson eye; trusses pyramidal and branched.

J. K. Lordy—Flowers small, cherry red, with dark eye, well branched panicles.

Mrs. Keynes—Flowers small, white, slightly feathered with pink; large, well branched pyramidal heads.

Massachusetts. R. N.

The Odontoglossum.

The species of this extensive genus of evergreen orchids, over 100 of which have been successfully cultivated, require cool treatment in a temperature of 40° to 65°. They enjoy liberal quantities of fresh air, a light position without the direct influence of the sun's rays, consequently a northern aspect, large glass, and a constantly plentiful supply of atmospheric moisture. They are impatient of strong, direct draughts, either in the heat of summer or the cold, dark days of winter.

In potting I have found the best material to consist of the finer parts of fern root mixed with the short moss found in the bare spots of dry woods. I prefer the latter to the common sphagnum from the swamps. The odontoglossums do not like a saturated condition in their potting material and they must have at

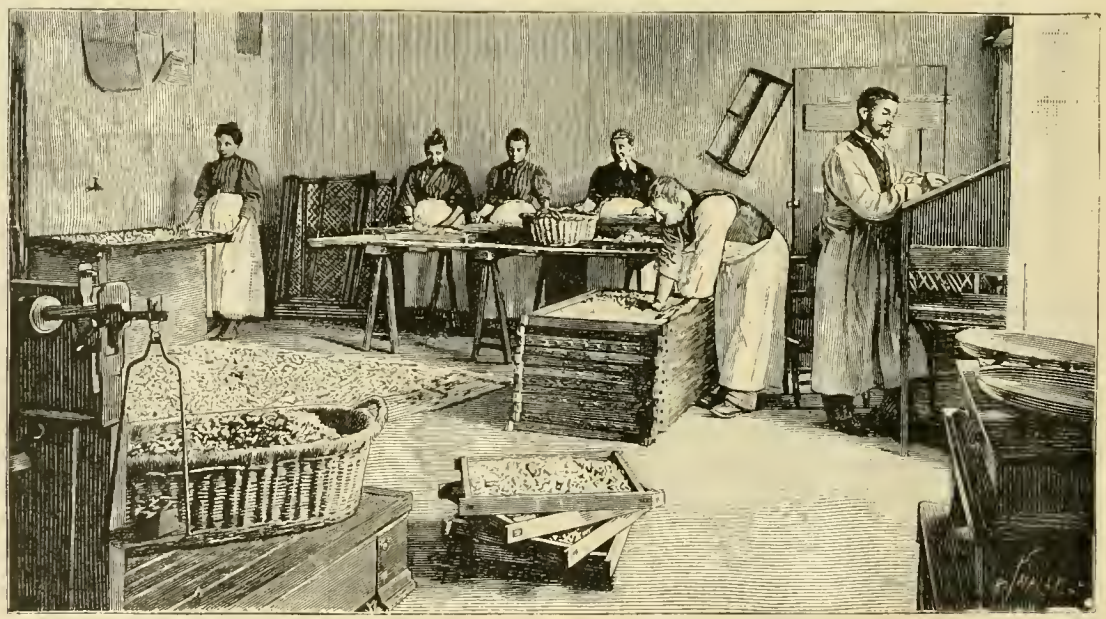

FIG. IV.—COLLECTING FLORAL PERFUMES BY THE "ENFLEURAGE" METHOD.

least two-thirds clean potsherds for drainage and only a moderate sized pot, so that in the summer season they can be slightly sprayed two or three times daily without getting them into a soggy condition. Pot firmly, and should the moss grow too tall a clipping with the shears will keep it in proper condition.

After they have flowered, which generally happens when the bulb is nearly completed, a careful withholding of water, except enough to keep bulbs and foliage plump, will be in order. Some will, after a little period of resting, soon show signs of new growths starting from the base of the last made bulb, and this must be cautiously regarded as to position and time and amount of watering. The young growth on first starting takes its nutriment from the parent bulb and if kept too try the bulb will shrivel. This must be carefully avoided, but at the same time on a very hot day there is danger in watering with hose or syringe, as often the young growth is very likely to damp off similar to cuttings of tender plants in the cutting bench.

I would therefore advise great care in this respect, watering with a pot the plants that require it and avoid applying it to the young growths until they have a plentiful supply of roots at their base. This applies of course to the very close, hot days of summer which are often prevalent in this climate. In a large collection it will be found that growths commence at different periods, so it will be necessary for the cultivator to group them according to conditions as they present themselves. It will be found impossible to set a time or make a rule as to treatment which will suit all the plants without little variations. The foregoing treatment I have found best for O. crispum and its many varieties, O. Pescatorei and other species from the South American Andes.

The Mexican, Peruvian and species from Guatemala, etc., will reqnire a warmer house in their resting period and a much drier condition when at rest. O. grande, O. nebulosum, O. Insleayi, etc., must not have any water or a very moist condition during their resting period, say from December to May, or the leaves and often the bulbs will become spotted. A light, airy place, somewhat shady, and an occasional watering is about right for them at this time, with a temperature of 50° to 55°. O. Rœzlii and O vexillarium and its varieties enjoy a temperature of 10° to 15° higher than the mountain varieties, and during the growing season an ample supply of water. Plenty of fresh air at all times is very essential to their welfare; light is also necessary, but the plants must be at all times shaded from the hot sun.

The treatment of O. citrosmum consists of a long rest, with the temperature at about 45° to 50°, after the bulbs have finished up, which should be not later than October 1, giving only an occasional watering. The flowers come early in the summer from the young growths when they are from one to one and one-half inches in length. When the flower spikes show, plenty of water is the rule till the bulb growth is finished. A little weak liquid manure will help the plants during the growing season, but care should be taken not to overpot them. This is a very satisfactory and profitable species and should be in every collection. I am now sitting in sight of about forty spikes of this beautiful flower and a very fine specimen of Cattleya gigas, some plants of Dendrobium calceolus, a few ærides, etc., in bloom, and they present a very charming picture at this season of the year, when almost all other flowers are off crop.

I have avoided naming a long list of varieties of odontoglossums as the treatment would be about the same in all varieties of each of the three different sections. Much has been said about liquid manure in and about the orchid houses, but with plenty of fresh air and suitable water I have never found much good in its use and often much damage. Cypripedium insigne, cymbidums, calanthes and such like plants sometimes do well with it, but in the case of any kind of odontoglossums I consider it the safer plan to be very cautious in the use of stimulants.

Utica, N. Y. WM. MATHEWS.

The Evans Challenge Trophy.

One of the most attractive amusement features of the annual convention of the S. A. F. is the bowling tournament. It was at Buffalo, in 1889, that this game was first put upon the programme and so strong a hold did it take upon those present that it has become a fixture, looked forward to from one year to the next.

In the first contest New York won in two games with a score of 1497, an average of 125 for each player. Boston was the scene of the second series of games and the sport was keen and spirited. New Jersey, Buffalo, Philadelphia and Chicago dropped behind until New York and Boston were left to fight it out, the former again winning by a score of 2811, an average of 156.

At the conclusion of the third inter-team contest at Toronto in 1891, New York and Philadelphia had defeated Boston, Buffalo, Chicago and Toronto and were tied, each having scored 1848 points. Five frames were rolled to decide the winner and Philadelphia made 480 to New York's 432. New York lost this contest upon a foul by Burns which permitted Philadelphia to tie.

At Washington in 1892 Mr. Spaulding, of South Orange, N. J., offered a cup as a trophy to be bowled for each year until some team won it for a second time when it was to become that club's property. Philadelphia was the first custodian, winning with 1683, or 140 per man, from New York, Washington, Buffalo, Summit, N. J., Boston, Baltimore, Chicago and Pittsburg.

In the World's Fair year the convention was held at St. Louis and New York won the cup from Philadelphia, Chicago, New York and St. Louis with a score of 3043 in three games, or an average of 169, the best record ever made.

At Atlantic City ten teams participated in the contest, Buffalo winning with 2539, or 141 pins per man, from New York, Philadelphia, Flatbush, Boston, St. Louis, Summit, Pittsburg, Washing-

THE EVANS CHALLENGE TROPHY.

ton and Chicago. The next match, at Pittsburg, resulted in a walk away for Buffalo, 2755 points, or an average of 153, and decided the ownership of the trophy.

It was at the Cleveland meeting in the following year, 1896, that J. A. Evans, of Richmond, Ind., offered a new challenge trophy, a silver cup of happy design. Buffalo again triumphed with a score of 2565, average 142, but because of some technicality, did not claim the honor and there was no decision. Pittsburg, Philadelphia, Chicago and Flatbush also bowled.

Last year, at Providence, eight clubs, Philadelphia, Boston, Pittsburg, Flatbush, New York, Fall River, Providence and Buffalo, participated, the first named winning with a score of 2501, or 139 per man.

Indications point to a sanguinary contest at Omaha next week.

Unhealthy Roses.

ED. AM. FLORIST:—Under separate cover I send rose plants and would like to know through the AMERICAN FLORIST if they bear any traces of the eel worm. They were planted in benches July 15, 1897, and some of the soil in which they were grown accompanies the plants. I use three parts of loam to one part of well-rotted cow manure, adding a small amount of pure bone meal. Is the soil good for roses? Last season my roses were nearly a failure. I maintained a night temperature of 55°, ventilated when weather permitted, kept the plants a little on the dry side and painted the pipes with lime and sulphur to prevent mildew. Twice during winter the temperature fell to 48°. Would this cause the mischief?

U. P.

On first examination of the plants I did not detect any club root, but on washing the roots out very carefully I found some, though not enough apparently on the roots sent to cause the plants to die off as described, and judging from the condition of the plants received I should think there must be some other trouble in conjunction with the eel worm to cause the destruction of the plants The sample of soil enclosed has all the appearance of being suitable for rose growing, and when the manure is added to it, certainly should be in good condition to produce excellent roses; if the bone meal had any acid in it I can readily see where the trouble comes from. I would advise "U. P." to use the soil and manure only for a season; let the boards on the benches have at least three-fourths of an inch opening between to secure good drainage, and then give the plants liberal waterings whenever they show indications of needing it, with all other treatment consistent with good management, and I really believe he will find the results much more satisfactory.

I have known many cases where bone was used that was not pure, doing a great amount of injury; in fact, unless growers can be certain that the bone meal at their command contains no injurious element, they had better never use it in the greenhouse at all. If the nature of their soil is such that it needs lime to give texture to their plants, it is safer to use a small portion of air slaked lime sprinkled lightly over the benches just before watering, two or three times during the season; this not only gives strength and texture to the plants but sweetens the soil and at the same time destroys many insect pests, but the operator must be careful not to put it on too heavy or the result will be the reverse of beneficial.

With reference to the question about a temperature of 48°, this certainly should not materially hurt the plants, in fact the only injury I have ever found arising from so low a temperature was to hold the buds on the plants somewhat longer before they were ready to cut; of course if extremes are followed, such as running the temperature up to 80° or over during the day with very little air on, and then letting it drop down below 50° the following night, the plants would naturally get quite a check, though this, even, would not cause the trouble.

There is one other thing that might cause his trouble, and that is sulphur gas from his furnace. This is an element that often does much damage without being detected till too late. The gas may not enter the house in sufficient quantity to be perceptible to persons working in it, but yet enough to do a great deal of damage to the plants, and it often comes from the furnace when shut down for the day if the dampers are not carefully looked after, and particularly on mild, damp days when the atmosphere is heavy. Such cases are very frequently caused by careless stoking or want of judgment on the part of the stoker.

JOHN N. MAY.

FIG. 1.—ROOTED VIOLETS OFFERED BY THE TRADE.

The Selection of Violets.

Several years ago the Division of Vegetable Physiology and Pathology of the U. S. Department of Agriculture, with which the writer is connected, began an investigation of the diseases of the English violet and the conditions best suited to its successful cultivation. In the cut flower market this crop stands third in commercial importance. It is estimated that in New York City alone three million dollars is annually expended from November to April for these flowers.

Successful cultivation of the violet is made impossible in many localities owing to a disease known as spot, and even in sections of the country most favorable to the crop this disease frequently causes great loss.

After visiting many growers in various sections of the country and hearing the different opinions as to the conditions best suited to successful culture of this crop, it became evident that the only way in which the desired information could be obtained was by growing the plants commercially. As the division had no facilities at its disposal for doing this work, and appreciating the immense value that would be likely to result from a careful investigation and practical solution of these problems, Mr. B. T. Galloway, chief of the division, and myself undertook the work in a private way, erecting greenhouses at Garrett Park, Maryland, our home, and there carried on the investigations independent of our office duties. In this connection it may not be out of place to state that Mr. Galloway, to whom I am largely indebted for any success I may have attained in this direction, has recently been obliged to give up this particular work on account of ill health. This is unfortunate and greatly to be regretted, for in addition to being a scientist and chief of the division, he is a practical man and a devoted lover of plants and is peculiarly fitted for investigating problems of this nature.

Our principal work has been conducted with the following ends in view:

(1) To find, if possible, the more important diseases affecting the crop and the best means of combating them.

(2) To find the best means of combating insect pests.

(3) To determine to what extent the plants can be improved by careful selection and thorough cultivation, in vigor, shapeliness, ability to resist disease, number, size, color and odor of flowers, and length of flower stems.

(4) To determine the physical and chemical conditions of the soil best suited to the growing plants.

(5) To obtain facts in regard to the best means of watering and feeding the plants during the winter months.

(6) To determine the best methods of propagation and the seasons best suited to the work.

(7) To determine the best way of marketing the flowers, the best markets, and the best time to pick the flowers so as to retain their fragrance for the greatest length of time.

Every practical grower will readily understand the many difficulties likely to arise in working out the problems above outlined. We found them even more numerous than we had at first expected. Some we have solved, some we have partially solved, and some have, up to the present time, baffled all our efforts and we realize that to throw light upon the more difficult of these may require months and even years of careful study, observation and experimenting. It is the writer's

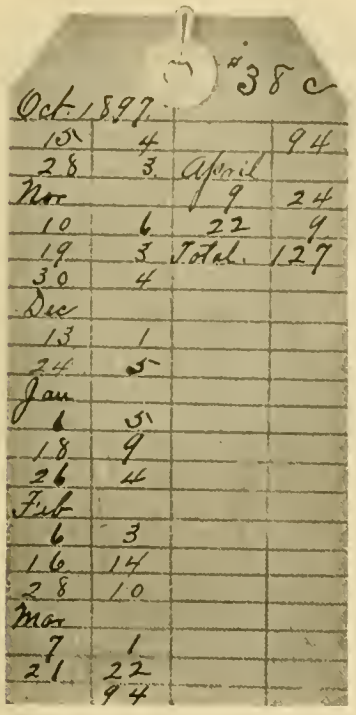

FIG. II.—RECORD OF FLOWERS PRODUCED IN VIOLET BED NO. 1.

intention to give in this paper some of the results obtained by selection of stock.

Plants, like animals, have an inherent tendency to vary, no two ever being exactly alike. For instance, one may produce a number of large, long-stemmed flowers, of good color, while another will yield fewer and smaller blossoms, off in color, and short-stemmed; some will be well formed, with vigorous constitutions, and, for a time at least, will resist disease, while others will make a feeble, ungainly growth, and readily succumb to any of the various diseases which attack the crop. By noting these facts and carefully selecting stock from plants that show the greatest improvement and approach nearest to the ideal of perfection, we are able to build up, improve, and fix more permanently their desirable qualities.

In our experience the average grower, especially of violets, pays little or no attention to these facts, and, with few exceptions, considers plants in any condition good enough to propagate from. He is content to plant or sell every cutting that roots, whether good, bad or indifferent, when, in fact, if the best results are to be obtained, about one-fourth to one-half of those rooted should be rejected, at least until the desired qualities are more permanently fixed by years of selection and cultivation. We have seldom been able to purchase what we consider first-class stock from the trade, although each season we send numerous letters to those advertising in the trade papers, asking for samples of their best plants and stating that only first-class stock is wanted. Fig. 1 is a photograph of the average samples annually received. We would not plant such stock as this were it possible to obtain better, and we claim it is possible for every grower to produce first-class stock by devoting a little time and attention each year to selection and cultivation. Some of the most successful growers, realizing the importance of these facts, propagate many more plants than they intend to set out, in order to have a sufficient number of young plants from which to select stock, and the one who succeeds in procuring even a few hundred plants of such stock may consider himself fortunate.

We keep a record of the flowers produced by each of our beds throughout the season, the number of flowers picked each time and the date of picking being recorded. Notes are also made on the general appearance and condition of the plants and on any treatment of the various beds that may be made necessary by existing conditions. These facts enable us to determine at the end of the season which beds were most profitable and which plants should be used to propagate from for the next season's stock.

Fig. 4, a photograph taken April 3, 1898, shows one of our houses containing three beds, which for convenience we will number 1, 2 and 3, commencing at the left. No. 1 contained 356 plants of our own selection, No. 2 contained 516 plants purchased from the trade last spring, and No. 3 contained 352 plants of our own selection. The plants, which were of the Lady Hume Campbell variety, were set the latter part of May, 1897. The three beds received the same treatment throughout the season. Comparatively few plants had to be reset during the summer and fall in beds 1 and 3, but in bed 2 fully 15% had to be replaced. The plants in beds 1 and 3 also made a more vigorous and healthier growth and produced a greater number of large, better-colored, and longer stemmed flowers than those in bed 2. The following table shows the number of flowers produced by each bed from October 1, 1897, to May 1, 1898:

Bed No.	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.	Total.	Average per plant.
1	2250	3300	2350	4350	5150	6450	6150	30000	84.2
2	3250	4200	1850	3750	5250	3850	9050	31200	60.4
3	3850	3150	2450	4380	5200	4700	8250	30980	88.0

As shown by the table, the average yield from the beds of selected plants is greater in both cases than from the bed of unselected plants, the plants in bed 1 producing on an average 23.8 and those in bed 3, 27.6 more flowers per plant than produced in bed 2—a combined average of 86.1 from the selected plants as against 60.4 from the unselected, or a gain of 25.7 flowers per plant, and this with practically no additional expense. In other words, this means that had bed 2 been planted with selected stock we would have obtained at the rate of 25.7 more flowers per plant, or a total of 44,461 instead of 31,200.

A successful grower should receive an average of at least 75 cents per hundred for his flowers. At this price we would have made $99.45 more on bed 2 last season had it been planted with selected stock instead of the unselected. This means for the average grower of ten thousand plants an increase of practically $2,000 annually. In an article by Mr. Galloway entitled "Work on Some Problems in Violet Culture," published September 4, 1897, it is shown that the average yield during the season of 1896-97 from ten carefully selected plants was 88 flowers, while the average of all the other plants grown was only about 50 flowers. In this connection he says: "There is no reason why the average yield cannot be made 100 flowers." I am confident that 90 per cent of the plants grown can be made to yield from 100 to 150 flowers per plant, and possibly more by proper care in selection and cultivation.

As will be seen in the illustration, a number of the plants in bed 1 are tagged. This is for the purpose of keeping a record of the flowers produced by individual plants, so that the parentage may be known of plants from which stock is selected. Figure 2 is a photograph of of one of these tags, and it will be seen that in this particular case the yield was 127 flowers during the season. Some of the plants produced as many as 145 salable flowers.

The following table gives the yield of five plants in bed 1 during the past season; the yield of the parent plant the previous season was 85 flowers.

Plant No.	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.	Total.
38a	2	6	6	16	10	16	28	84
38b	7	12	4	7	22	20	37	109
38c	7	13	6	18	27	23	33	127
38d	3	9	4	9	25	26	27	103
38e	3	7	2	11	13	16	30	82

FIG. III.—SELECTED PLANT READY FOR PLANTING.

The table shows that three of the five plants gave a much greater yield than the parent. The average of the five plants is 101, or 16 flowers more than was produced by the original plant. The average yield is 13 flowers more than that given by Mr. Galloway from ten plants during the season of 1896-97.

The following rules are especially recommended to growers:

1. Keep a record of the plants in the manner above described.
2. Select from plants with the best record as regards freedom from disease, shapeliness of growth and number, size and quality of flowers produced.
3. Select the very best growth from such plants for propagation.
4. After rooting select the best plants as regards freedom from disease, vigor, shapeliness of growth, root development and general appearance. If these are to be planted in flats, set in rows three inches apart and two inches apart in the row; if in beds, set three by three inches.
5. At time of final planting select from the flats or beds with the same precautions as observed when selecting from the cutting bed.

Figure 3 is a photograph of the fifth selection ready for final setting.

Washington, D. C. P. H. DORSETT.

Carnation Culture.

The hot, dry weather we have just passed through disheartened many a grower of carnations, and set many another devising ways and means of overcoming the effects of the drought.

Some growers, seeing that their plants were not making any growth, took them up and planted them in the houses, arguing that they could water and attend them better there, but this, coming so close to the time of their being planted out, gave them a double check and the result is some sorry looking lots of plants for next winter's bloom. Other growers put them into 4-inch pots in a shaded house and to-day these are fairly good plants, but not such as a good grower wants. Pots that were sunk in frames and thus given the benefit of the open air and watered occasionally made fairly good plants. This is the one and only way to grow carnations in pots.

One grower used a mixture of jadoo, brewers' hops and ashes. This gave a composition that produced a fine lot of roots, but he acknowledged it as rather expensive as it took a ton of jadoo mixed with the other ingredients to provide for 3000 carnations in 4-inch pots.

Still other growers have tried watering by various methods and where this has been well done the effects are distinctly noticeable, but hardly enough so to warrant the time and expense.

All things taken into consideration the best place for your carnation plants during a drought is in the field, providing they were planted early enough to get well started before the drought struck them. As the soil becomes dry the plants send out additional roots seeking for moisture and the dryer it gets the deeper these roots go and the more numerous they become, providing the plants are in good growing condition. If we knew exactly when dry weather was coming and transplanted or potted the carnations at the beginning, possibly we might be the gainers, but if we wait until it has been dry for some time we had better not run the risk of handling them as we are sure to loose the greater number of these feeding roots and a check will result that will be felt through the whole season.

If you leave the plants in the field and keep them well cultivated they may not grow quite so fast as you would like but when the rain does come your soil will be in condition to absorb it and the plants, with their extra number of feeding roots, will make a corresponding growth of top and you will almost see them growing. There is nourishment in a good rain that we can not supply from any other source and the top of a plant is bound to maintain its equilibrium with the roots as soon as they supply it with proper nourishment to do so.

Dry, hot weather will usually eliminate any disease the carnation is heir too and thus, if it is not too severe, is often a blessing in disguise. ALBERT M. HERR.

Livistona Rotundifolia.

This is one of the most beautiful of pot plants, its close, compact manner of growing giving it a finished appearance resembling and in fact making it a miniature of the very popular latania. To grow this plant to a good salable size, and yet retain all the seed leaves, is not the lot of every grower. In its young state, when about a year old, it is sometimes difficult to manage as, if over potted, or by reason of too much water, the leaves turn to that yellowish green hue which indicates a bad state of health. This condition is to be avoided if possible, as quite frequently the plants never grow out of it and have to be discarded eventually.

By planting out this species on the greenhouse table Robert Craig thinks he has solved the problem. The plants in the illustration are all growing vigorously, and it is evident they are in the best of health with all the seed leaves intact. This is the stocky growth which often calls for the remark from a customer "I like it because it looks so healthy." These plants will be taken up when ready for a 6-inch pot, and after three months' careful attention they will be thoroughly rooted and ready to make a bid for appreciation and a fair exchange of

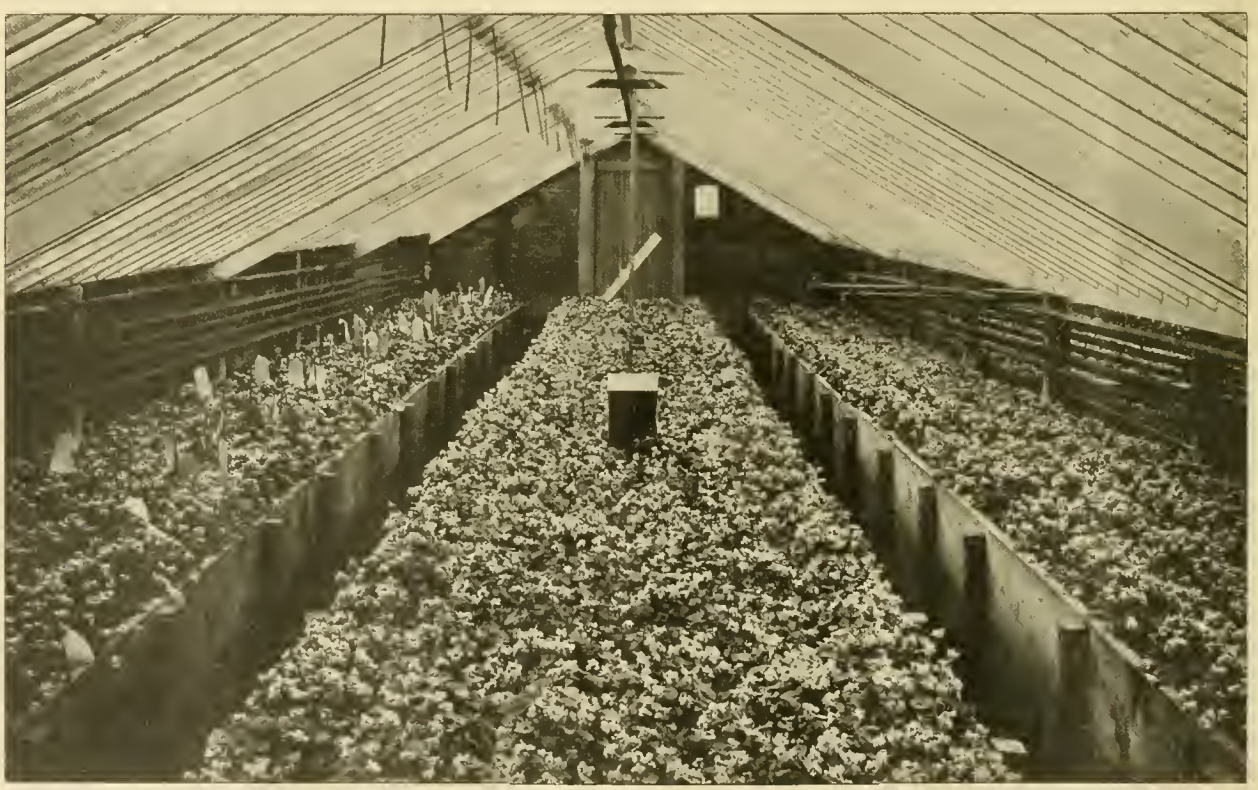

FIG. IV.—HOUSE OF SELECTED AND UNSELECTED VIOLETS.

LIVISTONA ROTUNDIFOLIA PLANTED IN BENCH.

money in all markets. This palm sells best in from 4 to 6-inch pot sizes. When grown larger the plant is subject to check, the leaves get a coarse wrinkled appearance and at times they are attacked by a green scum which requires considerable care in its removal. It seems to lose its charm when it outgrows the miniature stage. K.

Pandanus Veitchii.

The above popular plant is always in demand, and notwithstanding its tendency to rot in the center from excessive watering, when in the care of the kind soul who kills it, its high colored and graceful foliaged companion finds another possessor who fortunately is more negligent, with the result that the plant's term of life is lengthened. The illustration herewith reproduced shows a house with this pandanus planted in the benches. This method of cultivation affords stronger and stockier plants than that ordinarily pursued. Under this treatment it has also been found that they break better at the bottom, producing offsets which root easily. On account of the better access of air and light they are short and bushy and soon make salable plants, while cuttings or shoots from old stock in pots are generally long-legged and take considerable time to root.

This pandanus should neither have too much green in its leaves nor should the white predominate, as in the first case it is not readily salable and the latter state is to be avoided because the leaves rot and turn brown and the plant soon dies. All white plants are generally sold by growers at half price. James Dean used to grow this plant to perfection years ago; the green and white was evenly divided and, best of all, the colors were distinct and not run together as is often the case in a plant that is over potted or being forced too hard. Robert Craig & Son, whose house is here figured, are making a specialty of this plant and it will no doubt be seen here at its best in the near future. K.

MARQUETTE, MICH.—The loss which John Elliott sustained by fire has been adjusted and he has commenced rebuilding his greenhouses.

WILLIMANTIC, CONN.—M. T. Garrity, the Mansfield avenue florist, has bought the greenhouses and business of Mrs. M. G. Clark at the corner of Union and Jackson streets, and will remove the houses to Mansfield avenue.

New York.

QUIET TIMES IN THE METROPOLIS.—FREESIAS AND HARRISII ARE SHORT.—KAISERIN NOW THE BEST ROSE IN THE MARKET.—PRICES HAVE STIFFENED.—ERNST ASMUS PLEASED WITH HIS COLUMBIA.—CARNATIONS ARE LACKING.

The market remains dull, as reported last week, with no indication of activity in any line. Of news there is none and therefore your correspondent, with a proper regard for truth, can give none. Asters are of fair quality now, but rose stock is still very poor. Down town they report a shortage in freesias of large size and of Harrisii bulbs, which will be scarcer than was anticipated.

Kaiserin is the best rose in the market just at present. This rose would be much more popular, not only in summer, but in winter, were it not for the careless methods of the average store clerk. A rose that can be thumped and banged around without ruining it is what they delight in. Because it "bruises," Kaiserin, with its beauty and delicious fragrance, is forced to occupy a position in the rear. In colored roses, Meteor and American Beauty are the best sellers at present, and prices have stiffened up somewhat.

Carnations in the field are lacking everywhere. The number of summer carnation houses in this section does not seem to be as large as usual. Owing to the great abundance of asters, which are in the market now, all summer carnations can be dispensed with in the construction of design work, and their value is thus depreciated to such an extent as to make them scarcely worth the trouble of summer blooming in quantity. At this season of the year the Victor is so pale in color as to be scarcely distinguishable from Daybreak.

Ernst Asmus is highly pleased with the behavior of the new rose Columbia. He expects to see it take a position as one of the finest roses for summer as well as for winter. The color in winter is nearly identical with that of the American Beauty, but in summer it is much lighter—a soft, pleasing pink. The foliage and stem closely resemble Bridesmaid. Its rapidity of growth is something remarkable. It breaks out at once after cutting off the flower and is equally prolific in blooming.

Philadelphia.

PROSPECT OF A PROSPEROUS FALL SEASON CAUSES MUCH BUILDING AND IMPROVEMENT.—PENNOCK'S NEW COLD STORAGE PLANT.—CUSTOMERS TO BE ASSORTED.—A NEW COMMISSION HOUSE.—GOOD BYE TO THE EVANS CUP.—CUTTINGS

Business is very dull at present, but the stock of flowers is improved somewhat by the new cut of Beauties coming in. However, stock averages poor, with the price to match, and many are still pinching off the buds.

The prospects for a good trade in the fall are quite bright, judging from the amount of improvements being made. John Habermehl & Brother, of Twenty-second and Diamond streets, are remodeling and enlarging their store front and the show house immediately in the rear, making the new store about three times as large as the old one. S. S. Pennock is about to make extensive alterations, having purchased the property adjoining him on the west. He will add this to his

PANDANUS VEITCHII PLANTED IN BENCHES.

already large store, which will then number 1612-1618 Ludlow street. Several innovations are to be made by this progressive merchant, first among them being the doing away with his refrigerators and the installation of a complete storage plant, with commodious cold rooms for handling cut flowers in the most approved manner. We believe this is the first separate storage plant erected by any florist in this country, and speaks well for "slow" Philadelphia. Here is a chance for some one to get cheap refrigerators, as Mr. Pennock has no use for them and will sell one or all of the three very cheap. They are practically new. The power used to run the refrigerating machine will probably be electricity. The temperature at which the rooms are to be kept is 35° to 40°. Another move will be the opening of a Fakir Department, exclusively for these gentry, the balance of the building being barred to them. First we had mixed flowers, then they were graded, and now, lo and behold, the customers are to be graded. What may we not expect next?

George Moss, who for the past six years has been with S. S. Pennock, is about to open a commission house on his own account. George, who is thoroughly well up in the business, is a great favorite with the trade about town and we wish him every success.

William C. Smith, of 40 South Sixteenth street, is about moving to more commodious quarters at 1604 Ludlow street. His new store has four times the capacity of the old one and the advantage of being on the first floor and much better lighted will be greatly appreciated by his customers.

At the meeting of the Bowling Club last Thursday the boys gathered to take a last look at the Evans Challenge Cup. It seems too bad that a team could not be secured to go along and perhaps bring the cup back again, but at present writing they are not to be seen. Probably they may be found in Omaha on the day of the match; we hope so at any rate.

W. F. Dreer and wife left for Omaha on August 2. As to how many will be of the party leaving next Sunday afternoon it is hard to say. We are afraid the number will be far too few.

Next Tuesday, August 16, is to be Gardeners' and Florists' Day at Riverton. The annual visits to the Dreer Nursery at the invitation of the firm are not to be missed, as they are an opportunity to meet one's friends and with them wander about this immense horticultural establishment and inspect the novelties. Everything is now at its best, and a visit to the place is inspiring. One can not help but be benefitted and come away with a still greater love for his profession. K.

J. F. Wilcox.

J. F. Wilcox was born in Wisconsin, February 3, 1864. His parents being farmers and not blessed with a great share of this world's goods, he was compelled, at the early age of nine to do for himself, and from this time till he attained the age of sixteen he worked on a farm. Feeling that the west offered greater inducements for youth, he took the advice of Horace Greeley, "Go west, young man," and made his way as far as Council Bluffs, Ia., where he obtained a position with L. A. Casper, who was then exclusively a vegetable gardener, but who later engaged in the florist business.

Two years after entering Mr. Casper's employ Mr. Wilcox was given charge of the entire place as foreman, a position he filled until he was twenty-two, when he was admitted to partnership in the vegetable department. Later he bought the entire vegetable business, and three years afterward he bought the floral branch also. He has since increased, through diligence and push and close attention to business, and now has 300,000 feet of glass in use for floral and vegetable gardening, employing from 50 to 125 men. Twenty-two head of horses are necessary to keep up the work. Mr. Wilcox says he has made the most money out of the vegetable department of his industry.

Boston.

NELUMBIUMS AS FLORISTS' FLOWERS.—HAPPY GROWERS.—ROSES AND CHRYSANTHEMUMS AT NATICK.—VISIT TO J. S. BAILEY'S.—CYPRIPEDIUM CERTIFICATES.—VERY FEW FOR OMAHA.—BRIEF LOCALS.

The most noticeable flower in the market to-day, out of the ordinary run of florists' stock, is Nelumbium luteum, which has become thoroughly domesticated in some of the ponds near here and which are being brought in in large bundles, the immense fragrant yellow flowers making a grand show in the florists' windows, most of which are devoted wholly or in part to displays of aquatic flowers. Very little is being done in the way of business and the store florists are getting used to the torpid drowsiness of the summer season. One now hears no complaining and all take it as a matter of course. With the growers things are very different. Many of those from outside the city gates, who have been "lost to sight but to memory dear" for the past six weeks are now beginning to crop up with a complacent look of relief on their faces and a coat of tan on their arms and necks, and one can almost read their thoughts—"those houses are all repaired and planted at last, the coal is in the bin and everything is snug, now bring on your winter season and you'll find us all loaded and ready."

Grafted roses are in the ascendency at Waban Rose Conservatories. These are confined to the solid beds only and comprise full two-thirds of the entire stock. Mr. Montgomery points with pride to a house of grafted Bridesmaids, planted on June 25, which are now from two and one-half to three and one-half feet high, and averaging six to eight good buds to the plant already; on their own roots they would take probably three months to reach this stage. The pipes are not run under the beds but alongside—the rubble foundation being left practically exposed, and thus giving an opportunity for the heat to penetrate underneath. No new houses have been erected this season, but an immense amount of repairing and general rebuilding of benches has been done—some idea of which is given in Mr. Montgomery's statement that over a ton of nails and half a ton of spikes have been used up this summer. Pruning and tying down the plants in the second year beds is now going on. From one of these houses, three hundred feet in length, there were cut in the month of June 20,000 roses. The usual number of chrysanthemums is being grown. It would seem almost impossible to improve upon the chrysanthemum as grown here in past years, yet the impression given in looking at them now is that they are unprecedentedly fine. Mr. Montgomery calls these his recreation houses and says they afford him a world of relief after the drudgery and monotony of the rose grower's life in summer.

The Garden Committee, with a few other members of the Massachusetts Horticultural Society, visited the estate of J. S. Bailey, at West Roxbury, Wednesday, August 3, and were most hospitably entertained by William Donald, the gardener in charge. All were surprised and delighted as Mr. Donald escorted them about the spacious grounds and the wonderful results which he has been able to accomplish in the brief time since this new place was entrusted to his care. The planting of trees and shrubbery belts about the lawns and of climbers on the balconies of the mansion are all effectively done and scrupulous neatness prevails throughout. The interior of the greenhouses was found to be equally creditable, stove plants, orchids and grape vines all showing the most skillful handling.

J. E. Rothwell was awarded a certificate of merit at Horticultural Hall last Saturday for Cypripedium A. de Lairesse, a cross between C. Curtisii and C. Rothschildianum. Another Curtisii cross was shown by E. G. Uihlein, of Chicago, C. Uihleinianum, in which Spicerianum was the other parent. Mr. Uihlein was also represented by plants of Anguloa albomagna and Saccolabium Blumei. Rea Bros. made a display of phloxes and veronicas. Annuals were shown by J. L. Gardner and Mrs. Gill, and a table of auratum lilies by R. and J. Farquhar & Co. The collections of wild flowers staged by several parties were very fine.

When the visit to Omaha was talked of, one year ago, there was no lack of eager volunteers who were sure they would go to see the great west, but one by one they have dropped out of the list, some with valid reasons, some with slim excuses, and it is a pity that it is so, for they will miss the opportunity of a lifetime and New England's prestige in membership will be at a discount this year.

G. S. Congdon and S. Kinda, of Bristol, R. I., have been in town interviewing Superintendent Pettigrew on the subject of the elm leaf beetle which has been ravaging the magnificent street trees of that town.

W. H. Long has just returned from a two weeks' vacation in the Catskills.

D. Hartford has closed out his store on Portland street.

George A. Sutherland is enjoying his afternoons on the harbor.

Mrs. Robt. Moltman died at her home in Cambridge on August 5.

Chicago.

THE APPROACHING END OF A PECULIAR SUMMER SEASON.—STOCK IS STILL SCARCE.—DULL DAYS THIS WEEK.—OUTING AT MILWAUKEE.—A PICNIC NEXT YEAR.—ALL ABOARD FOR OMAHA.—PERSONAL AND OTHERWISE.

This has been an uncommon season in more ways than one; a season during which dull days have succeeded busy ones; a season which has been noted for the shortage of summer flowers, yet these same hot weather blooms have been better than usual. Prices have ruled considerably higher than the ordinary summer level, but the volume of trade has been so decreased that the season's business will not exceed that of last year. However, the winter should show an increased production of fine stock as the result of the unusual early planting and careful cultivation of most growers.

The past week has been a peculiar one. It followed several days of brisk business, but saw an unexampled lassitude in the market. Tuesday was one of the dullest days of the year and Wednesday was but little better. On Wednesday one fakir, who waxed indignant at being called a Greek, drove a bargain at one commission house which will probably stand unequalled. He bought the end of the rose stock of the morning, a box of from 1200 to 1500 Kaiserins and Meteors, for $3 and went out declaring that he had been robbed. The flowers were of fine quality and State street pedestrians bought them rapidly at ten cents a dozen.

Carnations have been rather poorer than the average this week and old rose stock has also shown a considerable decline, particularly Beauties. The new cut of roses is increasing gradually and the size is also on the up grade. Prices have not yet advanced.

The Chicago Florists' Club and its friends to the number of 150 visited Milwaukee on Thursday, making the trip upon the Virginia. It was an ideal day for a lake voyage and the occasion was enjoyed to the utmost. The stay at Milwaukee was of two and a half hours' duration and afforded the Florists' Club of the Cream City an opportunity to take the guests about the town, showing them the sights of interest, principal among which is the great Pabst brewery, the largest in America. The excursionists were met at the wharf by a military band and were escorted to electric cars for a ride over the principal lines. A number of Chicagoans had taken their bicycles and thus had vehicles of their own. The Milwaukee reception committee consisted of A. Klokner, C. C. Pollworth, Wm. Edlefsen, Wm. Ellis, G. N. Ringrose, C. Hoppenrath, Nic Zweifle, F. P. Dilger, M. Menges, Fred Holton, Herman Hunkel, Mr. Schmidt, Ben Gregory and C. B. Whitnall.

Enjoyable as have been the outings of the Chicago Florists' Club, something better is proposed for next year. The club has held one picnic and it was an occasion now frequently recalled with pleasant memories. It is hoped by many that hereafter the club may substitute one whole day's outing at some accessible, pretty picnic ground for the Sunday trips which have been in vogue. Edgar Sanders, or "Papa," as the boys affectionately address him, has been the busy man of this season's outings and is a warm advocate of the picnic plan; in fact, it was he who first proposed it. It is thought that, if a day is selected weeks in advance, all the stores, both wholesale and retail, can be induced to close and that such a retreat as Burlington Park or Laurelwood would attract literally thousands of florists and their friends.

Mrs. John A. Heller, of Quincy, Ill., who has been staying some time at Lake Bluff for her health, is now much improved and visiting with friends in this city.

C. L. Washburn and family and Miss Bassett returned on Tuesday from a five weeks' trip through Colorado. They visited all the points of interest and report a most enjoyable outing.

James Leonard, the nine year old son of S. F. Leonard, passed away last week. The family has the sympathy of their many friends in the trade.

N. J. Rupp, of the Moninger Company, has packed up his diminutive greenhouse and will meet the boys upon their arrival at the convention city.

There were seven bowlers in the game last Friday night. The team at Omaha will be a fairly representative one, but will not be in good practice.

Louis Gresenz, of Bassett & Washburn, has now enjoyed half of his two weeks' vacation. Upon his return Mrs. Horton will go to Saratoga for an outing.

J. E. Killen, representing C. H. Joosten, of New York, called on Chicago friends this week while en route to Omaha.

Albert Fuchs has a large order for decorations for the Bismarck Memorial at the Auditorium next Monday evening.

Charles J. Reardon, of Keokuk, Ia., is in the city spending his vacation with his people.

Mr. and Mrs. James Hartshorne have welcomed a daughter into their family.

C. S. Stewart has reached Omaha on his bicycle trip and will visit his brother there until after the convention.

Visitors: Chas. E. Schoenle, St. Louis; Z. K. Jewett, Sparta, Wis.; Wm. Trillow, Belleville, Ill.; H. D. Rohrer and son, Lancaster, Pa., en route to Omaha.

Joliet, Ill.

The Chicago Carnation Company, of which James Hartshorne is manager, have commenced the erection of eight carnation houses each 22x200 feet. The cypress is furnished by A. Dietsch & Co., Chicago, and the glass by the James H. Rice Company. Over 1400 boxes of 16x24 glass are required and at over $4 per box represent a considerable investment. The work of construction will be rushed in order that about 40,000 carnations may be planted in the houses this fall.

ANGULOA ALBO-MAGNA.—SEE BOSTON LETTER, PAGE 38.

Buffalo.

AUGUST THUS FAR IS DULL, BUT TRADE SHOULD NOW PICK UP.—OUTING OF THE FLORISTS' CLUB PREVENTED BY RAIN.—KASTING ABSORBS THE CUT FLOWER EXCHANGE.—MRS. NEWLAND'S IMPROVEMENTS.—NOTES AND COMMENTS.

Trade in general does not show any increase over July, still it was no worse, and I think that from now on we will see an improvement.

When the committee of the Buffalo Florists' Club selected last Wednesday for the outing at Grand Island they failed to consult the weather clerk, and he showed his displeasure by turning loose both wind and rain just as the boys and girls, young and old, came trooping down to the dock. There was to have been a ball game between Scott's nine and the Buffalo Florist Giants, and other fun was planned, but the storm stopped everything and the trip was postponed until later in the month.

Kasting's cut flower business and the Buffalo Cut Flower Exchange have been consolidated, Mr. Kasting buying the Exchange.

By reason of changes in the grounds at Forest Lawn Mrs. D. Newlands had to remove one of her houses and put one up on the south side of the present one. It will be large and will be devoted to carnations. When completed it will make her place very convenient for her fast increasing trade.

Phil. Scott was ill last week, we think because of anxiety about the ball game which did not happen and too much practice.

Adonis George Smith, who so ably assists Kasting, was on a vacation last week to Humboldt Lake and Crystal Beach.

Will Grever, with the artist's hair, who poses in Adams' store, snap shoots every one who enters. He is a kodak fiend in every sense of the word.

Will Palmer called last week while in the city. He is out at Lancaster superintending the construction of those new houses which, when completed, will be the finest range of glass in western New York. Max Beatties came in last night with the rain; he was damp but his paper boxes were all right. Mr. Walker, representing Robt. Craig, was a recent commercial tourist here. W.

San Francisco.

ROSE AND CARNATION HOUSES BEING PLANTED.—SWEET PEAS TO THE FRONT.—ASTERS COMING IN.—LILIUM AURATUM IN GOOD DEMAND.—OUTSIDE STOCK DOING SPLENDIDLY.—PRINCESS OF WALES VIOLET PLANTED EXTENSIVELY.—PERSONALITIES.

Trade has been very quiet in this city for several months past, in fact there is practically nothing doing in the cut-flower line. Many of the growers are now replanting their rose and carnation houses, so that there is not a very large quantity of either of these two flowers being brought into the market. Roses are, as a rule, very poor, due chiefly to the excessive heat which we have been experiencing during the past few weeks. Perle, Kaiserin, and Testout are about the only varieties of good quality. Sweet peas are about over for the season, but we still have some very good ones coming in. These flowers never were better than they were this year. They kept their true color and never lost their fine form during the entire season. The following varieties were most in demand: The Bride, Mars, Prima Donna, Royal Rose, Countess of Radnor, Lady Penzance and Blanche Ferry. Lady Mary Currie is going to be one of our most popular varieties for cutting when it becomes known. The prices of sweet peas held up splendidly this summer.

Asters are beginning to make their appearance and are selling very well but as yet the supply is very limited. Semple's are still the leaders. Lilium auratum is in good demand this season and is bringing $2.50 per dozen stems. Owing to the excessive drought the quality of some of the stock is rather poor. Amaryllis are also to be seen and are meeting with a fair sale. Carnations are coming in daily and the quality is excellent. Flora Hill is the leading white, with Portia, Daybreak and Scott each having their own admirers.

All outside stock such as violets, chrysanthemums, etc., have done splendidly considering the dry season. Chrysanthemums, it was thought, were going to be a failure, but they have come on nicely and prospects for the coming season are very good. About the same acreage is planted as last season. Violets, particularly, have had a hard time to survive the drought, but from all accounts are doing well at the present time. Princess of Wales has been extensively planted by all the growers, so that there will hardly be a shortage of that variety this winter.

Thos. H. Stevenson, the London florist, has again started for the Klondike. Before departing he removed his store from the Columbia Theatre building one block further up Powell street, where the very neatly arranged new store is in charge of Mrs. Stevenson.

A new flower store has been opened on Powell street between Ellis and O'Farrell, known as the California Floral Depot.

Shannahan has moved his store from Geary to Stockton street.

Several of the young florists of this city have departed for Manila. Five well known young men have gone from the different stores.

Chas. C. Navlet, of San Jose, was in town several days this week.

H. M. Sanborn, of Oakland, has returned from an extended eastern trip.

J. Carbone is now with Wm. Gage in Oakland.

Chas. Navlet has moved his Sacramento store to much larger quarters on K street.

S. M. Parker is now with Mr. Sidney Black at Menlo Park.

Chas. P. Braslan and family, of Chicago, are on a visit to this state. Mr. Kiley also accompanies the party. Mr. Braslan says prospects for good crops have gone but that the shortage will have a beneficial result in the seed trade this year.

N. Sluis & Son, of Holland, have been on an extended tour of the seed growing districts of this state.

James T. Lynch, with M. Lynch, of Menlo Park has returned from a trip to the different seed farms in the south.

Howard M. Earl, W. Atlee Burpee's genial representative to California this summer, has returned east. This was Mr. Earl's first trip to our state and he is much impressed with the great strides made in seed growing.

Chas. Gavenach, who was killed by a train recently, will be remembered as being foreman for the Sherwood Hall Nursery Co. at one time.

Arthur Cann, of the Garden City Floral Co., paid us a visit during the week.

Angelo Baldocchi is at Capitola for the summer.

A. B. Westland has accepted a position with C. A. Baldwin, of Mount View. Mr. Westland intends to start for the Orient in the fall.

J. Gilmour has returned from Los Angeles.

There is some talk of a commission house in this city at present. This has been talked of so often, and nothing has ever materialized that we hope this time it will prove a reality.

Waldo Rohnert, the popular young seed grower, spent several weeks in town lately.

Fred. M. Quickert is now foreman for M. Lynch at Menlo Park.

Andrew McDonald has resigned his position with C. A. Baldwin and assumed charge of the rose houses of Peter Donahue at Laurelwood.

Mr. Lackyer, who opened a flower store at San Jose, has gone out of business.

Sidney Clack has completed the replanting of all his greenhouses and his stock is all looking in excellent health at present. Mr. Clack has some fine American Beauties coming in. His carnations, are as usual, very fine. Mr. Clack's family are spending the summer at Del Monte.

Kenneth S. Murray, who has charge of Mr. Talbot's place, is the happy father of a bouncing baby girl.

Angelo Rossi has been at Camp Montgomery for the past few weeks.

METEOR.

Indianapolis.

GROWERS FACE A PROMISING SEASON.—SMALL DELEGATION FOR THE CONVENSION.—FLORISTS' CLUB WILL LISTEN TO ESSAYS.—JOTTINGS HERE AND THERE.

With business at a standstill and summer work all done one would think the conditions to be ideal for a trip to Omaha; but in spite of this, your correspondent failed to discover more than one person entertaining an intention of joining the convention party.

Things look exceptionally promising with the Indianapolis growers. A. Wiegand & Son have several houses of fine palms ready for fall trade. John Hartje, our leading carnation grower, has most of his plants housed and is busy planting violets; the Berterman Floral Company is planting carnations more extensively than in former years, and also have some of their plants housed by this time.

Huntington & Page are now harvesting their onion sets, of which they have fifteen acres in fine condition. E. Y. Teas, the well known Irvington nurseryman, intends to retire from business. His future home will be with one of his sons.

The August meeting of the Florists' Club was attended by only a few of its most faithful members. Frank Alley presided, the president as well as vice president being absent. Several members expressed regret that no papers had been read of late, whereupon it was resolved that at each meeting one member shall be "condemned" to prepare a paper for the following month's session. It was also ordered that a question box be provided.

The florists comment favorably upon the premium list for the next state fair. It will be remembered that last year's list did not meet with the approval of the trade, resulting in the poorest floral display ever seen at any of our fairs.

H. JUNGE.

HARTFORD, CONN.—J. G. D. Newton, the Parkville florist, who has been very ill with inflammation of the stomach is convalescing and will soon be completely recovered.

THE AMERICAN FLORIST

Subscription $1.00 a Year. To Europe, $2.00.
Subscriptions accepted only from those in the trade.

Advertisements, 10 Cents a Line, Agate $1.00 per inch. Cash with Order.

The Advertising Department of the AMERICAN FLORIST is for Florists, Seedsmen, and dealers in wares pertaining to those lines ONLY.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Wednesday to secure insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

THERE is a practical unanimity of opinion that the tide has turned and that business and prices are upon the up grade.

TWO new standard boilers, one constructed for steam and the other for hot water, are being placed on the market by Giblin & Co., Utica, N. Y.

THE next issue of the AMERICAN FLORIST will contain a detailed report of the proceedings of the Omaha convention. It will be a highly prized number and an exceptionally potent advertising medium. Copy should reach this office not later than Thursday morning.

JOHN N. MAY, receiver of Pitcher & Manda, has notified the creditors of the concern that there has come into his hands $133,932.61; that his disbursements, including dividends paid, are $124,292.21; that there remains in his hands $9,629.47. On September 12 the receiver will ask the Court of Chancery to fix his compensation at $4,500 in addition to $3,000 already paid, and the compensation of his counsel at $400 in addition to $600 already paid, and to order the disbursement of the remainder, after payment of costs, pro rata among creditors, who have filed claims to the amount of $67,560.10.

The Florists' Hail Association.

The report of Treasurer Albert M. Herr, for the year ending July 1898, is at hand. It shows the society to be in a healthy condition with receipts (including balance of last year) to the amount of $16,596.90. The losses paid during the year aggregate $7,585.88; working expenses $6,030.09.

Greenhouse Building.

Lancaster, N.Y.—W. J. Palmer & Son, two commercial houses each 19x125.

Rochester, N. Y.—E. R. Fry Floral Co., three commercial houses.

Brooklyn, N. Y.—D. C. Van Walkenburg, two commercial houses each 20x56.

New Bedford, Mass.—F. W. Bryant, one greenhouse.

Newton, Mass.—Mrs. F. C. Coburn, one palm house with two wings and propagating house, by Lord & Burnham.

Reading, Mass.—Mrs. R. Shackford, one conservatory 17x36. Geo. A. Shackford, one conservatory 18x70, by Chas. Ingra n.

Portland, Ore.—S. J. Lemmon, one house 14x70 for smilax.

St. Paul, Minn.—Christ Hansen; violet house 11x120.

Buffalo, N. Y.—Mrs. D. Newlands, one carnation house.

Cleveland, O.—H. Graham & Son, two carnation houses.

Omaha, Neb.—G. A. Joslyn, range of greenhouses.

Williamsport, Pa.—Evenden Bros., carnation house 51x160, violet house 12x160.

Grand Rapids, Mich.—F. A. Chapman, one commercial house.

Oconomowoc, Wis.— Otto Sylvester, four houses each 18x70.

Hartford, Conn.—John Coombs, three commercial houses.

The Society of American Florists.

ED. AM. FLORIST:—I wish to make public my views on the remarks of Mr. Rudd, in the AMERICAN FLORIST of July 9, on the doings of the executive committee of the S. A. F. at Washington last April.

I know Mr. Rudd and I like him, but I do not like his criticism upon our labors at Washington, of which I will take up but one point, namely, the Florists' Protective Bureau, which Mr. Rudd has condemned so forcibly in a beautiful combination of words and a fine display of learning. Yet, with all of his accomplishments, he could not hide the selfish current that ran between the lines of his article.

All of us who are compelled to earn a living have something to sell. I have plants to sell to every reliable florist in the country and it is worth much to me to get accurate information of those whom I may trust with safety. Mr. Rudd has his knowledge as superintendent of cemeteries and parks to sell and as that is mostly sold to large corporations, which are always good, he has no interest in the standing of the large number of florists of the country and does not want a part of his annual dues to go to that in which he is not concerned personally. The executive committee at Washington started the protective bureau with the hope and expectation of giving the members of the S. A. F. something that would be of much value to most of them in exchange for their dues. Whether it will be successful or not I cannot say. It depends upon who will run it. If I was sure of the bureau getting such a committee as the hail insurance has, I would have no fear of its success. There is one remark of Mr. Rudd's that I do agree with, and that is where he states that the question should be discussed so that the members may go to Omaha prepared to act upon so important a matter.

WM. K. HARRIS.

Notes and Comments.

I am pleased to notice so strong a disposition from the different cities to invite the S. A. F. to hold its next convention in 1899 within their hospitable confines. It is all very well for the strictly practical man of affairs to state that the S. A. F. should not await an invitation to hold its annual convention at any given point but go in and take the town by storm, as it were. Our society, however, has hitherto depended upon the plan of invitation and taking everything into consideration it is apparently better to be continued in that way. As at present understood it was not the florists of Omaha or Nebraska who invited the S. A. F. to hold the 1898 convention in that city, but those who were in the employ of the promoters of the exhibition held there were sent on to invite our society among many other organizations of a similar character. A kindred organization, the American Association of Nurserymen, was invited by the eloquence of those calculated to have the desired effect, in a similar way to that which the Society of American Florists was carried, and, as I get it from good authority in the older organization, it was treated with scant courtesy by those who were responsible for the carrying of the convention and the consequent acceptance of the invitation to Omaha. Had it been the florists and horticulturists proper who had extended the invitation to hold the convention at Omaha this year, it would have been treated with more consideration by the conservative element of the society. But the believers in manifest destiny are under the impression that what was done at Providence will eventuate to the benefit of our grand old society. E. L.

Presidential Requirements.

Here and there we have already heard a suggestion or two in the line of desirable men to lead the S. A. F. for 1899. Those who have been present at the thirteen or more annual gatherings since we began at Cincinnati in 1885, are, of course, acquainted with the requirements which appertain to presidential timber. For the thoughtful study of those members whose connection with the society runs back to a more recent date, or who may, perhaps, join in this session, it may be well to mention some of the conditions which, with each successive annual election, have had careful consideration.

No man has yet been chosen president of the S. A. F. who was not an active practical florist, acquainted with and trained in close personal knowledge of the growing of plants, and this is as it should be. No other should represent so large a body of practical workers.

For the past six or eight years, possibly more, the thoughtful and deliberate rank and file of the society have seen fit to elevate to this highest office some man who has been identified with the organization from its inception, or nearly so. To such an extent has this kindly recognition been maintained, that comparatively few old seasoned wheel horses are unhonored. A few remain, and we hope that when their turn comes to go in they may do so by acclamation. There are, however, recent indications that it is the will of the society to bring along our younger men, that from them we should hope for new ideas, new methods, new plans.

Geographical location has always been carefully considered in our councils and generously carried out. If the east has had a president this year, the west received it the following August, and with rare exceptions this custom has been followed. Last year we had a president from Ohio, the central section; this year we have had one from Washington, D. C., which may be fairly called east. The first expectation, therefore, would locate the man for 1899 west of the Ohio river, though were he located in far New England the west could hardly complain.

The coming president of the S. A. F., who meets the conditions named above, must also have made his mark as a practical man of the trade, and must have the brains and ability to carry forward the duties of his office on a plane which the very complete and careful work of the past thirteen years demands. An up-to-date, live, go-ahead and practical man of affairs is called for and must answer "Aye."

ALEXANDRIA, VA.—John Robertson, the florist died July 25, aged 63. He was a native of Scotland and was gardener at the White House during President Grant's administrations.

Postal Regulations.

Wide currency has been given to a report that the Post Office Department has issued an edict requiring publishers to attach to their publications all sheets transmitted therewith. This has been construed to apply to order sheets sent out with catalogues, but Third Assistant Postmaster General John A. Merritt calls attention to the fact that the order in question applies to second class matter only, and not to third class, under which head catalogues are admitted to the mails.

Since July 1 the postal authorities have declined (order 241, June 17) to return to sender undelivered second, third and fourth class matter until the postage has been fully prepaid. This is of much importance to catalogue men, as most of them have depended upon the return of undelivered copies to keep their mailing lists revised to date. By this order postmasters are instructed whenever, in their judgment, undelivered matter is of sufficient value to warrant it, to notify the sender of its non-delivery, and thus give him an opportunity of paying the return postage. This compels the catalogue man, should the postmaster consider the publication of value, to pay 2 cents letter postage besides the cost of remailing his pamphlet. This is a matter of importance from several view points and is a fitting subject for the efforts of the legislative committees of the societies the members of which suffer by this ruling.

The Convention Programme.

The complete programme for the fourteenth annual meeting of the Society of American Florists, at Omaha, Neb., is as follows:

TUESDAY, AUGUST 16, 1898.

Opening session 10:30 a. m.
Music.

Address **JOSEPH KIFT, West Chester, Pa.**

WANTED!

A hustler to take place on shares or buy at a bargain, 6000 feet of glass. **Better than Klondike.**

PARK GREENHOUSES, DuBois, Pa.

When corresponding with advertisers, mention the AMERICAN FLORIST.

Omaha.

SPACE IN EXHIBITION HALL IS AT A PREMIUM.—SUPT. STEWART ARRANGING FOR MORE ROOM.—A BIG TRADE DISPLAY IS ASSURED.—OMAHA'S TEAM OF BOWLERS WILL BE LED BY THE VETERAN, A. DONAGHUE.—DREER'S AQUATICS.—FROM HERE AND THERE.

S. B. Stewart, Superintendent of Exhibits at the Society of American Florists' Convention, says that space in exhibition hall is all taken up, but that he is making arrangements for considerable more to accommodate all. States of California, Washington, and other old exhibitors, and a great many new ones, are making urgent requests for space to exhibit novelties which have not been shown before.

Prof. F. W. Taylor, Superintendent of Horticulture, kindly offers the alcove in Horticultural Hall for the use of visiting florists, and there tables and stationery will be provided for their use and they are requested to make themselves welcome.

George A. Joslyn, of 401 Davenport street, is just completing a fine range of modern structures, Hitching & Co., of New York, supplying the material, and will have as fine grounds and conservatories as there are in the west.

After a series of fifteen games, concluded August 8, A. Donaghue, Sr., gained the place of captain of the bowling team, also winning a gold headed cane and silk hat put up for highest score. J. F. Wilcox gained second place with a score which was very close to first, and captured a ball put up by club. J. H. Hadkinson came in third and also obtained a lignum vitæ ball. G. Swoboda and L. Henderson won places on the team which will compete for the Evans Cup. L. C. Chapin and A. Donaghue, Jr., are the reserve force.

The following plants are in bloom in Dreer's aquatic exhibit at the exposition: Nymphæa O'Marana, N. chromatella, N. rubra rosea, a seedling pure white, good, with large upright flower; N. Deaniana, N. Layd-purpurea, N. Smithiana, N. Laydekeri rosea, N. coerulea, N. gracilis, N. Kewensis, N. Robinsonii, N. delicatissima, and also a fine bloom on Victoria Tricheri.

The flower parade given last week was so successful that it was repeated, and the pageant may make a third and last appearance during Florists' Week.

The Trans-Mississippi gardeners have the whole landscape force at work coaxing up the tardy bloomers and adding the finishing touches to the special floral attractions.

Siebrecht & Son have been busy rearranging their exhibit in order to make room for New York and Idaho.

AMERICAN SEED TRADE ASSOCIATION.

EVERETT B. CLARK, Pres.; JOS. A. BOLGIANO, 1st Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

MR. WM. F. DREER will arrive in Omaha Sunday, the 14th.

FURTHER advice from California points to a reduction in yield of onion over earlier anticipations.

Visited Chicago: Jos. H. Griese, of the Plant Seed Co., St. Louis; Fred H. Bateman, R. H. Shumway.

THE seed store of Oscar H. Will & Co., at Bismarck, N. D., was destroyed in the fire of August 8 which swept that town.

REPORTS from Southern Indiana indicate that redtop and orchard grass are damaged by heavy rains with blue grass half a crop.

A. J. M. JOINER expects to close the affairs of the western branch of the Jos. Breck & Son corporation and return to Boston by the end of August.

Seed Adulteration.

Under date of July 18 the Secretary of Agriculture issued the following circular:

The act of Congress making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1899, under the heading "Botanical Investigations and Experiments, Division of Botany," contains the following clause:

The Secretary of Agriculture is hereby authorized to purchase samples of seeds in open market, test same, and when found not up to standard he may, at his discretion, publish the results of these tests, together with the names of the seedsmen by whom the seeds were sold.

This provision went into effect July 1, 1898.

In a circular dated May 10, 1898, was published a table of standards of purity and germination adopted as the basis of the decisions of the department. The following additional standards of purity only (freedom from foreign matter), are now submitted for the information of buyers and sellers of seed:

Scientific name of seed	Common name of seed	Percent purity
Agrostis canina. .	Rhode Island bent	50
Agrostis stolonifera . .	Creeping bent. . .	50
Agrostis vulgaris	Red top	*90
Alopecurus pratensis .	Meadow foxtail. .	80
Arrhenatherum elatius	Tall meadow oat grass.	85
Cynodon dactylon. . .	Bermuda grass. . .	95
Dactylis glomerata	Orchard grass	90
Festuca duriuscula . .	Hard fescue.	85
Festuca ovina	Sheep's fescue	85
Festuca rubra	Red fescue	80
Lolium Italicum.	Italian rye grass	95
Lolium perenne. . .	English rye grass	95
Poa nemoralis	Wood meadow "	80
Poa trivialis . . .	Rough " "	90

*This standard applies to "fancy silver" seed only. For seed sold in the chaff, *as such*, a purity of 60 per cent is required.

These standards are provisional only, and the right is reserved to raise or lower any of them in the future after due notice has been given, and provided it shall be found necessary. Germination standards for these varieties can not be given at present, hence the vitality of samples mentioned in this supplementary circular will not be taken into account unless evidences of serious fraud be discovered.

All of the provisions of the circular dated May 10, 1898, apply to the varieties herein specified.

California Notes.

The very severe heat has injured the onion crop in the Santa Clara valley. The harvesting of sweet peas is now well under way and, as was expected, the crop is the shortest in our history. Some varieties are, in fact, complete failures. They are in good demand and prices are ruling higher. Radishes are also in a bad way in some districts as also are some pieces of lettuce. A large acreage of spinach was also a failure.

Among the novelties in the seed line in this state we find the New Cupid sweet peas to be the most meritorious. The writer has seen the red, a lavender and a beautifully striped sort with enormous flowers. The red seems to be the most floriferous of the Cupid group thus far introduced, being a perfect mass of bloom. Vaughan's America has been brought up to a fine variety, having a much larger flower and being beautifully striped, resembling an American flag. It is one of the most attractive tall growing sweet peas in the way of novelties on the coast. The Blanche Ferry Cupid shows up well.

Lady Mary Currie, which Eckford sends out this year, appeared last season in Salopian. Prince of Wales appeared in Prince Edward of York and the Duke of Sutherland in Shahzada. The Duchess of Sutherland also we have selected from seed received from Eckford two years ago. Queen Victoria broke into two different colored seeds, viz., black and white. The white seeded variety seems to be the better but is rather hard to hold, it being very apt to revert to the black seeded variety. Two different flowers of the same type appeared in Prince Edward and several of the growers do not know which one is Prince Edward. METEOR.

Cincinnati.

QUIET REIGNS IN THE FLOWER MARKETS. —GOOD KAISERIN ROSES FROM NEW PLANTS.—GIESY GOES TO OMAHA.—NOTES.

There is really little going on and even funeral orders have been lost sight of the past week. There is considerable new rose stock coming in at present, with Kaiserin heading the list. Some excellent stock of Maids and Brides are coming from George & Allen.

The only one from here who will attend the Omaha convention, Mr. E. Giesy, will travel to Chicago and there join the delegation of that city. Please have an eye upon him.

Robert Betz was appointed head gardener at the water works greenhouses, Eden Park, on August 1.

H. D. Rohrer and son, of Lancaster, Pa., were here yesterday on their way to Omaha. H. SCHWARZ.

SOUTH OMAHA, NEB.—A. Delanney has opened a down-town store in the Ensor block, Twenty-fourth and K streets, and has fitted it up in fine style.

Tree Planting on Public Streets.

[Paper read by C. M. Loring, president of the American Park and Out-door Art Association at its recent convention at Minneapolis.]

Any city or village, however inexpensive its buildings, can be made attractive by planting trees and otherwise embellishing the public streets with borders of grass and shrubs and flowers, thereby giving them a park-like appearance which is very pleasing to the eye, and refining in its influence.

The pioneers of our New England cities and villages appreciated the value and beauty of shade trees, and as a result, we have such attractive cities as Bangor and Portland in Maine, New Haven and Hartford in Connecticut, Springfield and Salem in Massachusetts, where grand old elms spread their sheltering arms over modest homes. Why are these old cities called beautiful? What makes them so attractive to the tourist and the seeker of rest? It is not the architecture of their residences, as the majority of them are very plain. Their great attraction is the trees which border their streets. There are cities dear to the recollection of all sons of New England, where certain thoroughfares have a wide reputation for their attractiveness, on which there are no large estates, and very few fine houses; but the noble elms which form arches over the streets, and screen the imperfections of the houses, which seem half hidden in a border of waving foliage, form a picture which is photographed upon the minds of all who see it, and they exclaim: "What a beautiful city!" I was born and reared under these grand old elms, and much of the happiness of my life has been derived through my love and reverence for them.

A pleasant argument of the lurking instinct for arboreal life might be found in the fact that we like to give the name of roof-tree to our domicile, although the roof-tree may be brick or stone.

Thousands upon thousands of the sons and daughters of New England left their homes with the love of the old roof-tree in their hearts, and this love carried its influence wherever they made new homes, and the memories of the old, with the longing for the trees, resulted in the planting of streets and roadways which are the pride of many cities in our middle and western states. One of these daughters writes: "In memory's chart of the little world of childhood, does not some best beloved tree mark the center thereof, and is not the tree's morning or evening shadow the radius of the golden day's round?"

Most children are born with a love for flowers and trees, and all that is beautiful in nature, and even when reared under the depressing influences of the tenement houses of large cities, the oyster cans and old bottles on the window ledges filled with the growing plants testify that this love is difficult to crush out of the hearts of the unfortunates. But, alas! too many children grow up without the refining influences of nature's floral gifts, and as a consequence their own natures are dwarfed and their lives blasted.

"God help the boy who does not know
Where all the woodland berries grow,
Who does not see the forest's glow
When leaves are red and yellow,
Whose childish feet can never stray
Where nature does her charms display—
For such a helpless boy, I say,
God help the little fellow."

Trees are not only for ornament and shade, but for purifying and cooling the air in summer. The exhaling power of leaves has been most carefully investigated, and the most careless observer has noticed its effect in cooling the air when passing through a wooded road on a warm day in summer.

It is also a well known fact that trees radiate heat in winter, and that the more there are in a neighborhood the more equitable is the climate. It is as much the duty of city and town authorities to plant trees as it is to build sewers, for both are sanitary measures, and it ought to be a matter of pride to the citizen to see that his street is not only healthful but beautiful.

Trees, as a rule, have been planted too thickly in most of our older cities. Large elms and maples are frequently seen crowded together, ten and twelve feet apart, and as a consequence they are misshapen and form a shade so dense that neither sun nor air can reach the houses. Experience has proven that it is a mistake to plant four rows of trees on any street that is less than one hundred feet in width, and that next to the folly of not planting at all is that of over-planting. Human beings require sunshine and air, but in many streets in our older cities these are excluded through the over-planting of trees, or the failure to remove them when they have grown so large that their top branches intertwine.

The American elm is the most beautiful tree for street planting, but in some localities it is so infested with insect pests that we should encourage the selection of other varieties when practicable. In Central New York the white maple is extensively used, and if it be given the proper care when young, it makes a noble tree at maturity. In many localities the sycamore is a great favorite, but it will not grow in the northwest. The linden, hackberry, Norway maple and the white ash are fine street trees, especially for narrow streets.

There should be a definite plan for all municipal improvements, and in the department of tree planting this can only be obtained through a commission having absolute authority to plant, prune or remove trees whenever or wherever, in its judgment, it is deemed advisable.

The Board of Park Commissioners of Minneapolis has authority under the park act to plant trees on any street and assess the cost of the same on abutting property. This authority, as a rule, is not exercised except when petitioned to do so by a majority of the residents of the street. The cost of planting and caring for the trees for three years is about $5, but this sum is undoubtedly under, rather than over, the actual expense. The city being underlaid with gravel, it is necessary to remove at least five yards of this material, which is replaced with the same quantity of rich loam in which the tree is planted. It would be a paying investment for the owner of the property if double the amount of loam were furnished and charged for. Each tree is protected by a guard, which serves the double purpose of protecting the bark from the rays of the sun and from the teeth of the horses. Many of the streets have been improved with uniform rows of trees, and the number of petitions for thus improving thoroughfares increases each year.

Some of the older trees which were planted before the care of this work was assumed by the Board of Park Commissioners show the usual haphazard way in which planting was done when each owner of a 40-foot lot exercised his own will. Some planted four or five trees, each of a different variety, and never cared for them. Others did not plant any, and a few set and cared for trees which have grown to be fine specimens of their kind.

Up to the time the park commission became the custodian of the street trees, more had been planted and had died, either through ignorance in planting, or through neglect, than were then growing. The loss since that time has been less than two per cent.

A commission having charge of the trees in the city of Washington has absolute control and care of them. It is decided to use a certain variety on a street, that variety is planted and there is no appeal from its decision. As a result, there is no city within my knowledge having so many unbroken rows of healthy trees.

Other cities in this country have undertaken the control of street ornamentation with great success, and it is to be hoped that all will follow their example. As a rule, the roadways on our residence streets are too wide and there is not space enough given for trees and other ornamentation. Fine effects are produced on an eighty foot street by making the roadways thirty feet wide, leaving twenty-five feet inside the curbing on each side, six feet of which next the lot line is for a walk and nineteen feet for grass and flower beds, or groups of ornamental shrubs, and shade trees planted from forty to fifty feet apart.

Many object to having so much space between the trees when they are young, and this accounts for their crowded condition in many of our older cities. To overcome this, some writers recommend planting rapid growing varieties between the more slow growing, which are to be removed when the branches of the permanent trees have grown to fill the space.

Another plan which I have seen in an eastern city gives a park-like appearance which is very pleasing. This gives a sidewalk next to the lot line six feet in width, a planting space for grass and trees six feet, two roadways eighteen feet wide and a center planting space of twenty feet filled with grass and shrubs, or grass and beds of flowers. There is no necessity for a roadway of over thirty feet in width on any residence street of sixty feet; one that is wider is entirely out of proportion.

There is not enough attention given to the ornamentation of streets. There is no reason why the residence portion of our cities and villages should not be made as attractive as a park. A few ordinances regulating the alignment of buildings, the setting of trees and care of planting spaces, would accomplish this desirable result. But, better yet, by the education of the people through such organizations as the Village and Neighborhood Improvement Association, the Brooklyn Tree Planting and Fountain, and the Park and Outdoor Art Association.

Cleveland.

SUPPLY IS EQUAL TO THE DEMAND.—ROSES ARE POOR AND GLADIOLI CHEAP.—LITTLE BUILDING IN SIGHT.—A HALF DOZEN FOR OMAHA.—NOTES.

There is very little stirring in a business way at present and flowers are sufficient in supply for all demands, which are largely limited to occasional funeral orders. Roses are rather poor in quality and wholesale at the prices prevailing for some time past.

Gladioli are to be had in any quantity and are exceedingly cheap as they usually wholesale at about $1 a hundred and and retail at 25 cents a dozen. Asters are being offered in fair quantity and quality; the writer has seen none of the Semple strain as yet, however.

There is very little building being done this year. H. Graham & Son are putting up two houses for carnations, in addition to what they already have.

The present outlook for attendance at the Omaha convention does not indicate a very large delegation from this city. A half dozen will probably just about express the number of the faithful who will journey to that far country beyond the rolling Mississippi.

A. H. Graham, who has been absent from the city for several weeks, returned lately. A.

Select Ferns.

One of the most distinct and beautiful of the large fronded maidenhairs is Adiantum Peruvianum, which requires stove treatment. Raised from spores and potted in a compost of loam, peat, and leaf-mold, with plenty of sand added, it grows freely. The matured fronds are of a deep green, which makes a good contrast with the young ones, these having a soft bronzy tint. Though not yet grown for market purposes I believe if well done many of our florists would use it for specially choice work, as next to A. Farleyense it is the most effective of the adiantums.

Acrostichum drynarioides is one of the most distinct ferns we have. I believe I have previously alluded to this as one which may be raised from spores. It takes a considerable time to establish plants large enough to bear the fertile fronds, which add much to its beauty. It is a native of the Solomon Islands and Penang, and succeeds best in a stove temperature, with plenty of pot room and a rough, porous compost. Grown in a suspended basket it makes a fine specimen.

Davallia Assamica is a very distinct species with fronds from six to eight inches long and two to three inches wide and of a dark bronzy green color. The rhizomes, spread freely and are covered with silvery grey scales, changing to a darker color with age. It makes a fine basket fern and may be readily increased by division, but I have not yet seen a batch of seedlings. The plant was accidentally introduced among an importation of orchids a few years ago, at which time I believe there were no other living specimens in cultivation.

Platycerium alcicorne majus differs from the type in having broader fronds. The basal or shell-like fronds are also much larger. Grown on cork it makes a fine ornament for the wall. I think the platyceriums ought to come into more general use for decorations. They may be hung on pedestals or against a wall and are most attractive. When exhibiting ferns I find these always attract much attention, and as they last so well in a dry atmosphere they may be strongly recommended. A. HEMSLEY.

THRIP RAVAGES THE CARNATION CROP.—NURSERIES SHIP MANY ORANGE TREES.—FEDER HAS A NEW CENTAUREA.—CALIFORNIA BULBS BEING SHIPPED.—THE CROP IS SHORT.—JOTTINGS.

The demand for flowers has kept up so far this season better than the florists expected. At times it has been difficult to obtain sufficient choice flowers to fill orders. Especially was this the case a short time ago, when a severe attack of thrip ruined carnation blooms as rapidly as they opened. The growers at Redondo, the only place where carnations are good all the year around, suffered more from thrip this year than ever before, and for some weeks less than one fourth of the crop was salable. The recent foggy nights and mornings have caused the almost entire disappearance of the insect pest.

Speaking of insects, which in this state multiply every month in the year, the county board of horticultural commissioners is doing good work in educating the people on methods of destroying the pests, as well as destroying all infested trees. In one district 7,000 trees have been cut down and burned. This effective work is being done all over the state.

The nurseries in the Pasadena district report having sold and shipped about 10,000 orange trees this season, most of them going to the central and northern parts of the state. The local planting consumed about 2000 trees.

Henry Feder, of the Redondo Nurseries, has a profitable monopoly in the way of a new centaurea that originated on his place two years ago. He has refused all offers for plants and seeds and is now supplying all the stores with the beautiful blooms, which are in great demand.

Jacob Dieterick, Twelfth and Wall streets, is making some substantial improvements in the way of lath houses, in which he will grow ferns and asparagus. He carries the largest stock of these plants in the city.

Harvesting, curing and shipping callas and freesias is now in full progress. There are plenty of callas of all sizes, but most of the freesia growers report not enough bulbs to fill orders. Rafferty, of Santa Ana, and Compere, of Wilmington, have sold all they have. Brazee & Co., of Wilmington, refused all early orders and now have several hundred thousand bulbs to put on the market. The Germain Fruit Company and E. R. Meserve, are forwarding big lots of callas.

Howard & Smith have faith in dahlias as a coming flower and are now exhibiting some new varieties, imported direct from England and Germany.

J. Aug. Kusche, formerly foreman at Capt. F. Edward Gray's Ingleside nurseries, is a practical taxidermist and is kept busy with that kind of work.

The capet bedding in the city parks has been completed, requiring 120,000 plants. This style of work is to be seen in six different parks in various parts of the city. The Germain Fruit Company secured the principal order for the Dutch bulbs for use in the city conservatories.

Capt. F. Edward Gray has sold his entire crop of California grown Harrisii lilies at satisfactory prices. He has a grand display of seedling gladioli in full bloom at his nurseries; one, a so-called blue, is most distinct.

The Southern California Floral Company has a man for manager now, Morris Golderson having celebrated his twenty-first birthday early this month.

NOTHING FINER OR MORE DURABLE FOR SUMMER DECORATING.

Cushman Gladiolus Co.

EUCLID, OHIO.

Dreer's Exhibition OF DECORATIVE PLANTS....

will be found in the Exhibition Hall at the **Florists' Convention,** Omaha, Neb., August 16 to 19, inclusive, 1898.

This exhibition will be an unusually interesting display of **Palms, Ferns, Araucarias, etc.,** complete and comprehensive, showing the quality, varieties and sizes which we grow in large quantities at our Riverton Nurseries.

Our representatives will be in attendance and pleased to show stocks, furnish prices and give all information desired.

Visitors to the Trans-Mississippi and International Exposition should not fail to see our exhibit of **Aquatic Plants** in the especially prepared ponds on the grounds.

Dreer's Quarterly Wholesale Price List should be received regularly by every Florist. If it does not reach you, kindly advise us.

Henry A. Dreer, 714 Chestnut St. Philadelphia, Pa.

Bulbs

. . . FOR FORCING.

Our motto "All Florists' Stock in Season," is steadily kept. We are now delivering Lilium Harrisii, Roman Hyacinths, Freesias, Paper White Narcissus, etc. This stock will be followed rapidly by a full line of All Fall Bulbs, Dutch, French and German, with Japan Lilies and Lily of the Valley, in select forcing grades.

Mastica,

CANE STAKES,
GLAZING POINTS.

Raffia, Sphagnum Moss, Wire Work, Tissue Paper, Doves, Wheat Sheaves, Waxed Paper, Rubber Hose, Tin Foil, Immortelles, Letters, Tobacco Extract, Fertilizers, Nicotine, Putty Bulbs, Tobacco Stems in Bales, Galvanized Wire Stakes, Sulphur, Paper Boxes, etc., etc., all at the closest jobbing prices which quantity orders and cash payment secure.

Greenhouse Plants

Our Greenhouses at Western Springs, Ill., are filled to overflowing with the most salable sizes of Palms, Ficus, Asparagus, Ferns and other plants, including all the best novelties worth pushing.

We extend to all visitors to the Convention a cordial welcome to visit us, either on their way to or returning from Omaha.

VAUGHAN'S SEED STORE,

NEW YORK, 14 Barclay St. CHICAGO, 84-86 Randolph St.

A Profitable Side Crop.

The tomato is one of the profitable side crops for the florist if properly handled. An important item in proper handling is to start right by getting proper seed. Experience has proven the "Lorillard" the best forcing variety so far; but much of the seed now on the market is not carefully selected as to type. I have taken pains to find something free from this objection and have pleasure in offering

Lorillard Forcing Tomato...

Specially saved for my trade by the originator, Mr. Jno. Gardner. Pkts., 25c. 50c and $1.00. free by mail. Bulk price on application.

Sutton's Best of All Forcing Tomato

Has done remarkably well with those who tried it the past season. I do not know how it is for outside, but it's a dandy for forcing; large, round, deep scarlet, very prolific. Pkt. 40c. mailed free. (No bulk of this to offer at present). Give this new sort a trial. Stamps accepted for small amounts.

GEORGE C. WATSON
Seedsman.....
Juniper & Walnut Streets,
PHILADELPHIA

NEW ROSE CLIMBING "Royal Cluster"

A hardy, white, climbing cluster rose of strong, vigorous habit, (Hermosa and Dawson); parent plant has borne enormous clusters of double white roses, slightly tinted with rose when breaking. Altogether a distinct and remarkably fine rose.

M. CRAWFORD, Cuyahoga Falls, O.

Grand Rapids.

PLANTING IS ABOUT COMPLETED.—GREAT INCREASE IN THE NUMBER OF VIOLETS GROWN.—ROSES AND CARNATIONS ALSO SHOW AN INCREASE.—GOOD SEASON ANTICIPATED.—NEWSLETS.

Trade has been very quiet of late. The quality of roses and carnations is improving, but first-class flowers are still very scarce. We had a fine rain this week and carnations and all field plants are growing finely.

Planting is about over, and there will be at least 25% more roses, carnations and violets grown this year than last. Violets are looking exceptionally fine this year. Crabb & Hunter have built a new range of four houses for this flower in addition to the two large houses they had in operation last year. Henry Smith has five houses devoted to them; the Grand Rapids Floral Company, Wealthy Avenue Floral Company, Hopp & Lemke, J. A. Creelman and Wm. Cunningham all have more space for violets than they had last year, and from present prospects this town can supply the entire west this winter.

The Grand Rapids Floral Company, Crabb & Hunter and Henry Smith have each rebuilt several houses and are making extensive improvements in their establishments. F. A. Chapman is building a new house and is rebuilding others. Most of the craft anticipate a prosperous season.

The Grand Rapids Floral Company had the palm swindle played on them the other day. Most of the plants were recovered, however, and the people in that section are not looking for cheap palms at present.

Wenzel Cukierski, our park superintendent and city florist, has very much improved the parks in every respect this year. We think him the right man in the right place, and are glad to know that the city also recognizes his worth.

HENRY SMITH.

A TESTIMONIAL FROM MR. GARDNER.

STOKE-POGIS, PENN., July 18th, 1898.

I have been using Mr. George C. Watson's Diamond Brand "W. P." Mushroom Spawn for the past ten years and have always found it *good*, being uniformly well-spawned, fresh, and very prolific. There is a great difference in spawn, and it is very important that the grower of this crop should start in right by getting a good article. I have no hesitation in recommending the "W. P." brand offered by Mr. Watson as the best I have been able to find. It has given me splendid results. JOHN G. GARDNER, Superintendent Stoke-Pogis Nurseries.

(Mr. Gardner is a grower of Mushrooms for the market of many years standing—famous all over the country by his success with this crop and I am justly proud of the above testimonial. G. C. W.)

Watson's English Mushroom Spawn, the W. P. Brand

This brand of spawn is always fresh and full spawned. It is the finest quality of brick or English spawn and is made specially for the most critical growers by the best maker in England. Many of the largest growers use the "W. P." brand exclusively and give the most flattering reports of its reliability and productiveness. Growers of mushrooms are cautioned not to use any other spawn, as the success of mushroom culture depends to a large extent on the quality of the spawn used. Old or poorly charged spawn is dear at any price, and there is no necessity for using such when the "W. P." brand can be had at a reasonable figure. Monthly importations arrive in this country from September to April, fresh from the maker in England, thus guaranteeing spawn of absolutely unsurpassed freshness. A brick or cake of spawn weighs about 1¼ lbs., and will plant a space two feet by three feet, that is, 6 square feet of surface, and the quantity needed for any given space may easily be calculated by this rule.

Harrisburg, Pa.

After a drought of six weeks Harrisburg was visited by a very welcome and refreshing rain, which started a good growth for the carnations and prospects are that they will make good plants for the winter, but close attention is necessary in keeping the cultivator going and pinching off the tops. Chrysanthemums and violets are looking splendidly and the promise is that we will have a good crop this season.

The Paxton Greenhouses force is kept very busy replacing the glass that was destroyed by the heavy hail storm that visited this vicinity on May 18 Ten thousand lights were broken and but 6,000 have as yet been restored. Mr. Taube, the proprietor, has met with misfortunes enough within the last two years to drive many men out of the business. The great cyclone of October 19, 1897, caused much damage to his greenhouses, blowing down one and breaking hundreds of lights in the others. His loss was $1000. He has not yet lost courage, but with his ambition and push will soon open one of the largest stores in Harrisburg.

Mr. Fennichel was also a sufferer from the last storm, his loss amounting to $200, and Mr. Desberas lost so heavily that he will discontinue business.

The Capitol building, which was distroyed by fire two years ago, is now in progress of rebuilding. The greenhouses belonging to the capitol have been remodeled and now present a fine appearance. Mr. Laben, the head gardener, has his rose houses looking exceedingly well and deserves credit for the way in which his lawn and flower beds are kept. The Capitol Hill has been greatly improved by the addition of a number of large palms. Mr. Paget, head gardener at the state asylum, took me into his rose houses, which are the finest I have ever seen, being filled with Kaiserin, Perle and American Beauty. C.

Bunyard's Florists' Cabinet

(E PLURIBUS UNUM.)
PATENT APPLIED FOR.

(FROM THE FLORISTS' EXCHANGE.)

"Anybody connected with a flower store will understand the gap this handy 'carry-all', so to speak, will fill, not only as a labor-saving device, but a money-saver as well. Who has not noticed the 'flotsam and jetsam' on the counters of our stores—wires, toothpicks, strings, etc., all higgledy-piggledy, contributing towards waste and loss of time. The old adage 'a place for everything and everything in its place' should be no more fitting than when applied to a florist's store."

DESCRIPTION.—The article in question is made of heavy tin and japanned in white, with gold trimmings. The three cylinders at the back, 9x4 in diameter, are for holding the long bouquet sticks, and stub wires; next come two cylinders 6x4, one water-tight for the sprinkler, the other for shorter wires or sticks; in the center is a receptacle for string and above a wire to carry a reel of silkaline or whatever may be used, and a card case. In the front are four compartments, 7x3 respectively, for wire, pins, toothpicks, tinfoil, etc., the whole being 12 inches square.

Price, $3.00 each, two for $5.50. Also made with one drawer for Florists' Letters, $4.00 each; with two drawers, $5.00 each. Terms Cash or C. O. D.

Edward Reid,

WHOLESALE FLORIST,
1526 Ranstead St., above Chestnut,
PHILADELPHIA.

My business the past season largely exceeded my expectations. To meet this rapidly growing trade I have added a number of growers of select stock to the list of consignors and will be prepared to meet all emergencies.

Choice American Beauty and Tea Roses, Carnations, Violets

AND SELECT STOCK OF ALL KINDS IN SEASON FURNISHED AT THE SHORTEST NOTICE.

Only five minutes to express terminal stations. My careful packing insures safe delivery. Write me for prices at any time and I will guarantee satisfaction.

A FEW MORE CONSIGNORS OF CHOICE FLOWERS ONLY SOLICITED.

Chrysanthemum Notes.

Just at this time all of the old and a few new ideas in staking are brought out for the guidance of young florists and the assistance of some of the older hands who may be ambitious to improve on their former methods. I have tried for several seasons a simple idea which I find works nicely. Use a cane stake about half to five-eighths of an inch thick and have it at least as high above the pot as your plant may grow. Paint a dark green color and stick firmly as near the center of the pot as possible without injury to the roots of the plant. Use no string of any kind for tying except, perhaps, a piece of raffia near the pot to make the main stem firm. Have a lot of straight pieces of galvanized wire about the size of a knitting needle and a sharp brad-awl the same size as the branches of the plant; pierce the cane horizontally, being careful not to split it, and insert a wire reaching to the extreme diameter of the bush. With a pair of wire nippers cut the wire about an inch from where you wish your flower stem placed and bend a loop in the end of it a little larger than the stem. Spring this open and around the stem. Choose a shoot on the opposite side of the plant and hold that in position with the other end of your wire. Any number of wires can be passed through your stake. You will find the friction of the wire in passing through the cane will be sufficient to prevent its moving laterally, and the slightest bend of a wire, even after the plant is in bloom, will hold a flower just where it is wanted. In a plant of good foliage the wires will be invisible, and the stake can be cut off just below the foliage, when the plant has attained its growth. F. P. DAVIS.

Decorative Plants...

Over 50,000 in exceptionally fine condition, as good as any, grown cool, their value will double until next Christmas, if shifted now. Height of plant is given above pots in natural position.

CARNATIONS

FROM THE FIELD

Large lot in good shape now ready. Flora Hill, Victor, Mayor Pingree, Lily Dean, Triumph, Armazindy and other good varieties. Jubilee in four inch pots. Write for price lists.

Carnations Under Glass.

We are growing all our carnations under glass this summer, and with observation and experience gained from last season, when part of our plants were grown the same way, we have been able to direct our operations so that at this date the plants are showing very gratifying results. The varieties grown are Mrs. McBurney, Mayor Pingree, Flora Hill, Jubilee and Breitmeyer & Sons' new Cerise Queen. Mrs. McBurney is making the best growth of any, the habit being very similar to Daybreak, which is one of the poorest growers in the field here. It seemed to be almost impossible to keep it free from thrip and red spider, which stunted the young shoots to such an extent that it took them a couple of months to straighten out again after being planted inside. Indoor planting has, therefore, certainly an advantage in this respect, as we have thus far been unable to find a trace of disease of any description whatever.

Jubilee and Mayor Pingree are also showing up well and are making the same short, stocky growth as when planted in the field. The first planting was made June 16, the plants being at that time clean, healthy stock from 3-inch pots. Before planting the soil was made as firm as possible and the plants set ten inches apart each way. To show the growth they have made, it may be stated that the plants of Mrs. McBurney before being tied up are touching one another each way, so we fail to see where the poor little plant comes in that is credited so often, by several writers, to indoor grown carnations.

After planting we water only at the plant, and not the entire soil in the bench, till the plants have got root hold and by this time generally the weeds have started into growth. We then go over the benches and do the weeding when the soil is leveled off. The beds are then given a good watering, care being taken that the soil is wet evenly all through. The little shading that was left on the glass is now removed entirely, so that the plants get the full sunlight. Some advocate giving the beds a mulch at this season, but we are not in favor of it, as we cannot see what is to be gained thereby. The roots have not reached that stage of development on the surface which calls for protection and nourishment.

Our plan is to keep the surface of the bed open by light scratching, which keeps it from becoming hard or baked and helps the soil below to retain the moisture longer. Sometimes we find the surface to look as though it was thoroughly dry but upon examination below find it to be in an even moist condition, which, from our experience, is what the carnation requires, and we aim to keep it that way so far as possible. In regard to syringing, we find at this season if the soil is kept as above stated, and not allowed to become too wet, that an occasional syringing on bright days is very beneficial and with plenty of ventilation will keep the plants free from thrip and red spider.

C. W. JOHNSON.

STEUBEN, N. Y.—At the flower show in progress here the display includes a collection of orchids and water lilies from Kimball Conservatories, of Rochester, a shipment of named gladioli from John Lewis Childs, the seedsman, begonias from Grove P. Rawson, of Elmira, and other rare plants. Mr. Rawson gave his lecture, "A Garden Full of Experience" on the opening night.

LAGER & HURRELL, SUMMIT, N. J.

TO THE EDITOR—

Dear Sir: This summer that now begins to totter with age has been one of much heat and humidity, of which our ingenuity, assisted by Nature, has caged a part into many living specimens of beauty.

Being desirous that those specimens shall be widely distributed, that the handiwork of Nature may brighten the scenes in many homes when she has reversed her course and lies slumbering beneath the white sheet of gloom, it is to your valuable paper that I do appeal for assistance, that I may make known to the world my achievement the past summer, in storing heat and moisture into so much beauty, from the life-giving rays of Sol, surpassing all my previous efforts, as Nature at this time of the year gives all the elements that build the vegetable cells and tissues into beauty, without the aid of Nature's ancient storehouse of heat from the bowels of the earth.

We are able to place within the reach of all a fine collection of Rubbers, Palms, Dracænas, Pandanus and many rare specimens of other Decorative Plants, of various sizes.

For description and terms apply to

WM. K. HARRIS,
55th St. and Springfield Ave.,
Philadelphia, Pa.

2500 Asparagus Plumosus Nanus (TRUE)

Extra strong, ready to shift to 3-inch pots, $3.00 per 100. Selected, $3.50 per 100.

Kentia Forsteriana. Made-up Plants.

7 inch pots, 4 plants in a pot, center plant 36 to 42 inches high, others about 18 inches, $2.00 each.

8 inch pots, 3 plants of equal height, about 42 inches high, $3.00 each.

9 inch pots, 3 plants of equal height, from 42 to 48 inches high, $4.00 each.

10 inch pots, 4 plants in a pot, center plant 5 feet high, others 2 feet high, $10.00 each.

12 inch pots, 5 plants in a pot, center plant 6 feet high, others 2½ feet high, $25.00 each.

Phoenix Rupicola.

The most graceful of all. We offer a fine lot in 6 inch pots, characterising very nicely, with 6 leaves, 20 to 24 inches high, $1.50 each; $18.00 per doz.

Stronger plants in 6 inch pots, 24 to 30 inches high, 6 to 7 leaves, $2.00 each.

Also a fine lot of young plants in 2¼ inch pots, $1.00 per dozen: $8.00 per 100

Latania Borbonica.

Our stock of Latanias in small sizes is again in excellent condition, especially the 2, 3 and 4 inch pots.

2 inch pots, 3 to 4 leaves, 60 cents per dozen; $4.00 per 100; $35.00 per 1000.

3 inch pots, 4 to 5 leaves, beginning to show character, $1.25 per doz; $10.00 per 100; $80.00 per 1000.

4 inch pots, 4 to 5 leaves, an excellent lot of plants of exceptional value, $3.00 per dozen; $25.00 per 100; $225.00 per 1000.

5 inch pots,	4 to 5 leaves,	18 inches high	...	$5.00 per doz.;		$40.00 per 100.	
6 "	5 to 6 "	18 to 20 "	"	9.00 "	"	75.00 "	
7 "	6 "	24 "	"	12.00 "	"	100 00 "	
7 "	6 to 7 "	26 to 30 "	"	1.25 each		15.00 per doz.	
8 "	6 to 7 "	28 to 30 "	"	1.50 "		18.00 "	
8 "	7 "	36 "	"	2.50 "		30.00 "	
10 "	7 to 8 "	36 "	"	4.00 "		48.00 "	

The largest sizes are not all perfect, the lower foliage being somewhat clipped, but are good salable plants that will give entire satisfaction.

For a complete list of other Palms and Decorative Stock, see our current Wholesale Catalogue.

HENRY A. DREER,

714 CHESTNUT STREET.

PHILADELPHIA, - - - - - - - PA.

Chinese Primulas.

This is a class of plants very easily cultivated, and also one of the most useful for florists' work. From seed sown the first week in April they can be had in bloom at Christmas and New Year's.

I find the seed germinates best in a temperature of 75° to 80°. I sow the seed in well drained pots, using a compost of loam and leaf mold with a little sand; a square of glass laid over each pot will prevent the soil from drying out too quickly.

The young plants should be left in the seed pots until they are large enough to pot off singly into 2-inch pots and then they can be put out in a cold frame and kept close and well shaded for a few days. As the pots become filled with roots give them a shift into 4-inch pots.

The next and final potting is into 6-inch pots, using a good, rich soil consisting of two parts loam to one each of well decayed cow manure and leaf mold, with a small proportion of sand. I also add a 5-inch pot of bone meal to each barrowful of compost. After the final potting the plants are plunged in coal ashes and given all the air possible, only using the sashes on them in case of rain. They will need shading through the hottest part of the day. Water carefully until well rooted; afterwards a little weak manure water will help them. I leave them outside in the frame until the end of September, after which they are removed to the greenhouse and placed on a shelf near the glass, keeping the house at a temperature of 45° to 50°.

NEW CATALOGUE READY ABOUT SEPTEMBER 15, 1898.

St. Paul.

TRADE AND WEATHER CONDITIONS IN THE MINNESOTA CAPITAL.—REPLANTING IS IN PROGRESS.—MUCH BUILDING AND REPAIRING UNDER WAY.—NOTES FROM THE PARKS.—JOTTINGS.

Quite a number in the Twin Cities have announced their intention of attending the Omaha meeting and we hope to see from fifteen to twenty-five in the party.

The growers are all very busy. Those who are not planting carnations are building new houses or making necessary repairs.

Trade jogs along in the usual manner at this season of the year but, leaving out funeral work, there would not be enough to warrant one in keeping stores open. Stock is scarce. Roses and carnations are hard to obtain at any figure, but some good Kaiserin, Meteor, Testout and Beauties are seen, the latter bringing $3 per dozen at retail. Nearly all carnations have been thrown out to make room for new stock and cut blooms are very scarce.

In outside stock sweet peas are fairly plentiful, though the drought cut short the crop at least fifty per cent. Asters are just coming into bloom and are of poor quality. Many plants are coming blind and the crop will be poorer than last year.

Christ Hansen has broken ground for a new violet house 11x120 feet. His roses and chrysanthemums are all planted and doing nicely. In one rose house he has cemented the benches and is sub-irrigating. It is yet too early to note the results of this departure.

Fred. Schulze, on Lafond street, has purchased a new boiler for his plant.

C. Bussjaeger has completed his new houses and has them filled with roses. The steam fitters are now at work putting in pipes, etc. Out at Merriam Park A. S. Swanson has built one new house.

H. J. Puvogel, on Summit avenue, has bought a new boiler.

E. S. Lemke has his new store and office building nearly completed. This is in the rear of his retail store and is being fitted up as a wholesale department.

L. L. May & Co. have repainted all of their houses inside, putting in new benches in several and made many much needed changes in benches and heating. This week they have broken ground for a new cellar for potatoes and bulbs, to be built underneath their frame warehouse.

Our long drought was broken on Friday, the 5th, by a heavy rain which will prove of immense benefit to all outside stock.

The parks are looking very fine at this season. At Como the Victoria regia and Randi are showing a number of buds and blossoms, while the Zanzibar lily, water hyacinths and poppies are all in a blaze of glory. Cannas are displaying their gorgeous tints to best advantage and all nature seems putting forth one grand final effort before the autumn frosts rob it of its beauties.

Recent callers were Mr. Goppinger, representing Andre Leroy & Co., Nimes, France; Mr. Sluis & Son, of Eukhuizen; Mr. J. H. Roach, with J. B. Rice & Co.; Mr. H. Currie, who called for one moment; Mr. Suie, representing H. A. Drecr; Mr. Boas, of Edwards & Docker, and several others. FELIX.

COUNCIL BLUFFS, IA.—Frey & Kastner, successors to McPherson & Frey, have moved into new quarters at 4 Pearl street, have put in new fixtures and may claim a very handsome store. They are also building a considerable addition to their greenhouses.

ROSE HILL NURSERIES

Welcome!

We extend to **ALL** a cordial invitation to visit our Nurseries at New Rochelle, N. Y., either on your way to or from the Convention, **and at all times.** We may be able to furnish you just what you want. Our stock of

Palms, Ferns, Pandanus, Ficus,

Dracænas, Araucarias, &c.

has never been as fine as the present, and we believe it would be worth your while to see our stock and compare it with others before purchasing. Drop us a postal card, or telephone, and our carriage will meet you.

NOTICE! We shall not publish a Fall Catalogue or Price List. We would suggest and also advise, that any one in this line of business should **see the STOCK** before purchasing and compare same. Plants cannot be sold by yard or height. Height or size of pot never makes the plant. Catalogues and Price Lists we consider as the best method by which to keep your name before the public, but when stocking up for Fall and Winter trade, the best way is to see the stock, either by a **visit** or **sample.** Our stock is the finest today in America, and to sell by catalogue description would not be doing **JUSTICE** to the same, as it is cool grown, not drawn, and in fine shape, compact and bushy and well colored and will stand well wherever placed. We extend this invitation so you may be able to judge for yourselves.

New York to New Rochelle, 35 Minutes. **TIME TABLE** New Rochelle Depot to Nurseries 10 Minutes.

New York, New Haven & Hartford Railroad Trains leave from 42d Street for New Rochelle, N. Y.—7:00 8:00, 8:02, 9:02 10:03, 11:03, 12:06, 1:06 2:02, 3:06, 4:06, 5:03, 5:33.
Return to New York—8:38 9:04, 9:45 10:40, 11:40, 12:45, 2:13, 3:28, 4:25 5:13, 6:35.
Or, if you prefer to take a sail up Long Island Sound to Glen Island and visit one of the grandest Summer resorts in America Little Germany and Botanical Collection, our carriage will meet you at the wharf. Boats leave foot of Cortlandt Street, East 32d St., and Brooklyn.
Let us know which way you are coming and at what time.

Siebrecht & Son,

Helpful Reminders.

This is what we call our dull season, and it is a fine opportunity to get some new ideas.

The national meeting of florists is valuable, but there is one kind of information that cannot be obtained at conventions, and that is the knowledge of how successful your efforts have been in pleasing your customers. You can not do better work for two or three days than to drive around and examine the lawns and gardens of those for whom you have done work or supplied stock. Make a careful note of such things as are doing well and those which are not satisfactory. After going the rounds you will have many interesting matters to think of.

Where you had filled a few porch boxes or vases and find them becoming rootbound, send a package of sheep manure and bone meal mixed, with your compliments, with a note explaining that they are becoming impoverished and need fertilizing in order to maintain a vigorous growth for the balance of the season. Admonish others to keep the old flowers picked off and to give thorough waterings; say you noticed that a couple of geraniums were broken out of a certain bed, which you beg leave to repair; inform them that their coleus are in poor color, doubtless because the lawn sprinkler was allowed to wet the foliage frequently; it is best to let the water run from the hose quietly under the foliage. Note that you were pleased to see the clematis in good condition, but suggest that the trellis be extended so as to facilitate growth and make more display. Cover all the points and make particular note in your mind of any of your own short comings which may be in evidence. It will pay you to hire a stenographer to get these letters out for you in good shape. There is no better advertising, and, as for yourself, it keeps you thinking directly on the most essential points that concern the welfare of your business.

While the summer trade in flowers is quite limited, we must fill orders carefully, and a few flowers that are giving some of us satisfaction are valuable as a relief from roses and carnations which are not good now. The Japan lilies please almost every one and are adapted to many uses. The justicias are pink, a color much in demand, are easily grown and bloom continuously in summer. A person will look on a single plant with indifference but a good display will win admiration. The white jasmine is pleasing in a bunch of mixed flowers for a vase. Tritonias, old fashioned and little known, please immensely; the hypericums are most beautiful yellow-blooming shrubs at this time of the year and are very easily grown; torenias are pretty now and the Soupert roses and forget-me-nots keep blooming and are continually called for.

There is a good deal of poultry wire netting used nowadays for trellises for vines and florists are called upon to put it up. Hardware stores charge one and one half to two cents a square foot for it, but you can get it in whole pieces at thirty-seven cents per one hundred feet. It pays to get a roll and sell it as wanted.

Convention Headquarters

FOR THE SOCIETY OF AMERICAN FLORISTS WILL BE AT THE . . .

FIRE PROOF HOTEL DELLONE

COR. 14th and CAPITOL AVE.

Special rates have been secured: $1.00 European Plan. Engage rooms in advance. $2.00 American Plan.

Address W. W. COATES, Omaha.

CHICAGO TO OMAHA.

Take the Chicago, Milwaukee & St. Paul Railway. It is the best road and shortest line between the two cities. It has the most perfect track and the finest equipment. The sleeping cars are palaces, and the dining car service equal to the best hotels.

For the meeting of the Society of American Florists, the Chicago, Milwaukee & St. Paul Railway will sell tickets at one fare plus $2.00 ($14.75) Chicago to Omaha and return on August 14th and 15th. Tickets good to return to and including Aug. 25th.

A special solid Vestibuled Electric Lighted train will leave via Chicago, Milwaukee & St. Paul Railway from Union depot at 6:15 p. m. on Monday, August 15th, on arrival of trains from Philadelphia, New York, Boston, Buffalo, Pittsburg, Cleveland, Toledo, Detroit and Milwaukee, arriving Omaha 8:20 a. m. Tuesday.

In purchasing through tickets from East of Chicago, see that they read over the Chicago, Milwaukee & St. Paul Railway from Chicago to Omaha.

Reservations can be made in sleeping cars and tickets purchased on application to H. E. Laing, City Passenger Agent, 95 Adams Street, Chicago.

EXCURSION TO BOSTON.

The Nickel Plate Road will sell excursion tickets from Chicago to Boston and return for trains of September 16, 17 and 18, at rate of $19.00 for the round trip. Tickets will be valid returning until September 30, inclusive. On account of heavy travel at this particular time, those desiring sleeping car accommodations should apply early to J. Y. Calahan, General Agent, 111 Adams St., Chicago. Telephone Main 3389. (58)

MEETING SOVEREIGN GRAND LODGE, I. O. O. F., BOSTON, MASS, SEPT. 19-24.

For this occasion the Nickel Plate Road will sell tickets at rate of one fare for the round trip. Tickets on sale September 16th to 18th, inclusive, good returning until September 30th, inclusive. For particulars address J. Y. Calahan, General Agent, 111 Adams St., Chicago. Telephone Main 3389. (59)

NICKEL PLATE EXCURSION TO BOSTON.

Tickets on sale for trains leaving Chicago September 16th to 18th, incusive, at rate of $19.00 tor the round trip, and good returning until September 30th. Also cheap rates to all points East. FRED. BOERNER, Cape May City, N. J.
When writing mention the American Florist.

A trade directory...

is an essential to the wholesaler. He needs it every hour. Not only does it supply him with a complete list of all to whom he should mail his circulars or catalogues, but in a thousand little ways does it save him time and vexation worth many times the price of the handy volume.

This is true of any trade directory, but it is particularly true of the American Florist Company's Directory of the Florists, Seedsmen and Nurserymen of the United States and Canada.

In this trade interests are so diversified and specialized that a life long experience will not acquaint one with even a small part of the information which is here accessible. In the Directory is found not only the name of every dealer, classified by states and towns, with each one's branch of the trade, but all names arranged alphabetically.

Here, also, you find the name and address of every firm which issues a catalogue, 950 of them, with a key telling the general contents of each one's publication.

This and much other valuable information is obtainable in a well printed, closely bound volume of 351 pages which will be sent postpaid upon receipt of $2.

AMERICAN FLORIST CO.,
324 Dearborn Street, CHICAGO.

Milwaukee.

THE CREAM CITY HAS ITS SHARE OF THE DULL DAYS.—GOOD PROSPECTS FOR FALL FLOWERS.—PREPARATIONS FOR THE APPROACHING SEASON.—NOTES FROM HERE AND THERE.

In these days of military triumphs General Lassitude has invaded the flower markets and has assumed a dictatorship. There is very little trade and in most of the stores the young lady clerks require their fancy work to occupy their time. Most of the proprietors are, however, busy with plans for the season soon to open and of which we all anticipate a great deal. Everything indicates a good supply of the most desirable stock and work is being managed to conform to the requirements of the retail trade. There will be but the usual supply of roses, carnations and violets but there will be a considerable increase in the variety of flowers offered in this market. Small growers find this class of stock more profitable than competition with those who produce staple blooms by thousands.

Wm. Edlefsen is vacating his Seventh street place and is rebuilding upon ground further north, purchased some time ago. He is also building a show house at the rear of his store on Third street and has given up his drug store stand on Milwaukee avenue.

George Volk has severed his connection with Fox's flower department and will grow blooms for the wholesale market.

John M. Dunlop and Miss Belle Martin were married Tuesday evening, August 10. C. B. W.

EVANSVILLE, IND.—Levi Lockyear, of 1623 Upper Second street is very low with nervous prostration, with which he has suffered for eighteen months. He is 62 years of age.

SPECIAL TO SEPTEMBER.

Our **SMILAX** must be planted out or potted up right away. All orders received before Sept. 1st will be filled at the nominal price of 75c per 100; $5.00 per 1000. **Cash with order.** Bear in mind these are extra strong plants out of 2-in. pots which makes a great saving in freight compared to 2½ in. pots and are every way as good. Order at once and save money... **South Side Floral Co.,** Springfield, Ill.

CHOICE VIOLET PLANTS

Marie Louise.

Large field grown, healthy stock, $5.00 per 100; $40.00 per 1000.

J. W. DAVIS, Morrison, Ill.

Mention the AMERICAN FLORIST when corresponding with an advertiser.

Tacoma, Wash.

The annual sweet pea exhibition at McCoy's, surpassed anything of the kind ever given in this city or the northwest. The store was artistically decorated with palms, wild ferns and white ganze which served to show off the thousands of sweet peas most advantageously. The sixty-two different varieties shown were of the best and all grown to perfection. Most prominent among the new varieties were two handsome specimens grown by Mrs. Lena W. McCoy and which have not yet been sent abroad. The favorite of these two, very fittingly named Tacoma, is marvelous in its beauty and in coloring is not unlike the grand old mountain of the same name whose crest, covered with perpetual snows, takes on a delicate roseate tinge when kissed by the setting sun. The other home grown specimen is a dainty new pink, self colored. The visitors to the exhibit were requested to suggest a name but out of the great number given one has not yet been selected. Patriotic names seemed to take the lead. The invitation cards were in the national colors, white envelopes tied with red ribbon and sealed with blue wax.

M. B. P.

Wilmington, Del.

The florists here have had a fairly good season, although there was little profit in the bedding plant trade. The backward spring made all the growers fear that they could not sell out, and down went the prices.

W. H. Vance is building two new carnation houses, each 20x100, even span, and one general house 10x100. He is also putting in a new fifty-horse power boiler. Herman Wolff, Mr. Vance's capable foreman, is superintepding the improvements and is taking good care of about 17,000 carnation plants which are in the field. They are in fine condition, although the protracted hot dry spell was hard on all outdoor stock. A good rain last week saved a great deal of money for the growers, as it came when it was most needed. Daybreak, Victor and Portia are the best in the stock under Mr. Wolff's care.

Rollo & Son are soon to take the greenhouses recently vacated by De Voight & De Wilde.

GIANT PANSY SEED.

The finest of all the mammoth flowering varieties. No better grown; carefully selected; very large flowers, of perfect form and choice colors. All my florist customers praise this strain very highly. I should be pleased to have the florists of America give my home-grown Pansy seed a trial to prove its superiority over the so-called imported fancy seed. Grown only in mixture. Per trade pkt. of 3500 seeds $1.00; half pkt. 50c. A pkt. of the new Forget-me-not "Jewel" added to every order.

JOHN F. RUPP, Shiremanstown, Pa.

Des Moines, Ia.

Business has been very dull here for the past month, far duller than usual. No additional glass is being put up and the only activity is in the fields of carnations, which are looking well and promise unusually good plants for fall. W. L. Morris grows virtually all the roses and chrysanthemums which are sold here. He has an establishment of 30,000 feet of glass and feels that the prospects for fall trade are good, as business in general is excellent, and his stock has started unusually well this summer. Des Moines will be well represented at Omaha, as already a half dozen have announced their intention of attending the convention.

The second annual picnic of the Des Moines Florists' Club was held at Union Park July 28. Those who did not attend missed a fine picnic and grand feast. Various games were participated in by old and young. Twenty-four sat at the supper table and one ran around so with the lemonade that he was not counted.

Helena, Mont.

Chas. Horn is completing a new carnation house 16x100 and reports July business above the average.

Mrs. Wells has made a number of improvements in her premises. Her roses are in the "pink of condition" for winter.

Mrs. Mattie is improving the shining hours by laying in a supply of fuel for the coming winter.

T. E. Mills and family, of the State Nursery Company, spent a few days rusicating at Boulder Hot Springs.

W. Arthur Judges spent a month's vacation at Portland and Puget Sound points. While on his trip he visited a number of establishments in the Queen's country, at Victoria, B. C., where he found methods in vogue quite different from those employed in this part of the world, partly owing to nationality, and partly to natural and climatic conditions.

A. J.

UTICA, N. Y.—Forest Hill Cemetery is in splendid condition, the display of plants having never been excelled. One Sunday five persons were arrested for pilfering the blooms.

KRAFT'S PLANT TONIC

99% XX

It Kills the Harrisii Lily Mite

C. J. Stromback, of Lincoln Park, Chicago, says so.

It Kills Black and Other Aphides

The Cornell University Experiment Station authorities, Ithaca, N. Y., say so.

It Kills Mealy Bug & Prevents Carnation Rust

James Leake, gardener to B. Eldredge, Belvidere, Ill., says so.

It Kills Palm Scales...

August Jurgens, Herendon St., Chicago, says so.

It kills all insect enemies of plants, prevents disease in all its varieties and imparts vigor to the growth without risk of injury to the most delicate forms of vegetation.

This preparation is non-poisonous. We guarantee the above to be correct in every particular. A trial of a twenty-five cent bottle will convince you of the accuracy of all our claims for this remarkable insecticide, fungicide and tonic.

Kraft Plant Tonic Co.

ROCKFORD, ILL.

Steam Pipes in a Hot Water System.

ED. AM. FLORIST:—Having my greenhouses heated by steam, and being desirous of changing to a hot water system, I wish to know whether (1) I can safely use 1¼-inch pipes for the latter, and (2) how many additional 2-inch pipes will be needed to maintain the same temperature as under steam? (3) I wish also to know whether a 2-inch pipe connecting with the top of the boiler, and a 1¼-inch connecting with the bottom, will serve the purpose of flow and return respectively? (4) May gas pipes be used for the vents and how many will be necessary? W. R.

The data furnished is not sufficient for a definite answer. (1) With an elevated tank and flow pipe 1¼-inch pipes can be used with a hot water system, but they are not desirable in houses much over fifty feet long, unless the system is run under pressure. (2) If the present pipes are sufficient with low pressure steam, it will probably answer if one-half as many 2-inch pipes are added for hot water. (3) This question cannot be answered definitely without knowing the size of the house and the desired temperature, but the return is at most only large enough for 400 linear feet of 1¼-inch pipe and to carry that amount should be increased at the boiler to 2 inches. (4) Gas pipes will answer for the vents, but they should be carried above the level of the tank. There should be a vent at the highest point of each coil. L. R. TAFT.

Jadoo and Cocoanut Fibre.

ED. AM. FLORIST:—Seeing your comments on cocoanut fibre and jadoo I got some of both and like them. But, if the experience of others is like mine, there must be a reform in the methods of shipment, at least for the fibre. To begin with, as shipped the cocoanut fibre contains seventy-eight per cent of water, which dries out in a few days on exposure to the air in a dry place, This makes the freight five times as much as necessary. Mine was *marked* fertilizer but *billed* as wood fibre, taking a freight rate of $24.80 per ton. An express company's receipt for it was sent, causing a pleasing anticipation of express rates ($120 per ton) until it arrived. At present it is somewhat a luxury; if the water could be squeezed out of it, it might very well become a necessity. T. L. MEAD.
Florida.

EAST BROOKFIELD, IND.—J. H. Le Favour is erecting a new propagating house nearly 200 feet long. He made a great success of forcing cucumbers last winter, and will devote a great deal of his time to this crop hereafter.

Providence, R. I.

The responses to interrogations about business at this season are very monotonous, as, with the exception of a funeral order now and then, there is practically nothing doing. Many of the craft are taking advantage of the situation and making pilgrimages for recreation. Among others to leave their business in the hands of trusty subordinates is Walter S. Hogg, who is sojourning with his family at Saratoga.

The humidity of atmosphere has given vent and a deluge in two chapters has visited our city within a week; much damage being done by washouts, and causing carnations in low places to rot at the root.

A recent visit to the Rhode Island Greenhouses showed indications of a very promising crop of roses grown on budded stock. Mr. Miller has his carnations set and everything about the house has an air of cleanliness. They are about putting in two new tubular boilers in the place of two that were inadequate.

F. Macrae will head the list on chrysanthemums this year, judging from appearance of his stock at this writing. Chrysanthemum growing is no experiment with "Mac"; he manages to get the right hitch on varieties, as well as quality of flowers.

Good carnations are getting scarce. Asters are coming in small quantities and are not yet up to the standard.

There is a degree of uncertainty about a large delegation for the convention at Omaha from Providence. S. J. Reuter & Son, of Westerly, are the first to signify their intentions, but at the last call others will undoubtedly follow their good example. Rhode Island will surely be favorably represented. LITTLE RRODY.

Portland, Ore.

It is hot on the coast this summer. Ninety degrees in the shade is the regular thing here now and every now and then it goes up to 100°. Everybody is irrigating. It is either irrigate or dry up and blow away. This is to be expected for three months, and the other nine it rains as it did in the days of Noah. From forty-five to fifty inches is the average annual rainfall.

S. J. Lemmon is building a house 14x70 for smilax. This season he will plant 1000 calla bulbs, an equal number of Lilium longiflorum, 7 to 9, and about 3000 carnations, mostly Scott, McGowan, Albertina and Tidal Wave.

Trade here this summer has been discouraging; prices very low and small sales. Our city is too small for the amount of glass there is here. Martin & Forbes are our leading retail florists. Mr. Forbes is a "dandy." His face beams like the full moon and people will buy of him just to see his eyes sparkle. The The firm is talking of building some carnation houses at their place at Mt. Tabor.

P. Johnson wanted to sell his establishment when he thought that he was going to succeed W. G. Wallace as gardener at the city parks, but I think he is glad that he did not since Mr. Meyers picked the political plum.

Mr. Betts sold his stock, rented his place and went to Klondike. We hope he will come home a multi-millionaire.

A. Pfunder is our biggest and most successful florist. He has a very fine establishment.

Clark Bros. are wide-awake people and are making money. O. K.

Cypress
Greenhouse Material.

We are the pioneers in Clear Cypress Greenhouse Material. We discovered that Cypress is better than any other wood for greenhouses from top of posts up and we introduced it, and fought for it against many prejudices, and finally succeeded in bringing it into general use.

Others have attempted to follow where we lead, others are trying to reap what we sowed, but we have the experience and are recognized as experts in greenhouse construction.

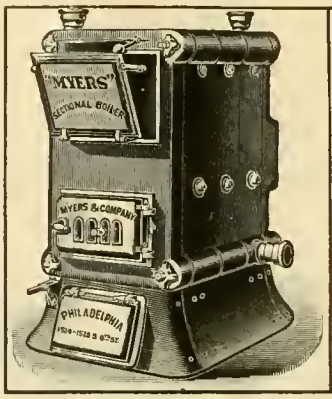
PHILADELPHIA. NEW YORK. CHICAGO.

Butte, Mont.

During the "slack" season the usual "getting ready" work proceeds with the Montana florists for the winter's business. The season for outdoor blooms is probably shorter in most parts of Montana than in any other state. While there are sections of the state where the altitude is much lower, and the outside season much longer, in most parts of Montana few roses are grown, or will successfully winter through outdoors. These natural conditions, however, have their good side in making the period of demand for inside grown stock extend virtually all through the year, and Butte, "the greatest mining camp on earth," has to ship flowers every day in the year.

Law Bros. & Day, who succeeded to the old established business of Mrs. Knox, report business very good. They frequently have days when such large orders come in that they are hardly able to take care of them satisfactorily. Their greenhouse stock is in good shape for the approaching winter.

The State Nursery Co. is doing its share of the business, and now have attained the enviable position of being able to supply nearly all their stock from their own plant at Helena, which with its increased capacity, is reaching out to nearly all parts of the state for business. A. J.



Springfield, Ill.

Business is rather slow at present and good flowers are scarce.

George Hansen has rented his greenhouses here and has gone to Pittsfield, where he has bought the establishment of Miss E. Graves.

Carl Rauth has built a new and thoroughly modern carnation house 18x75.

Bell Miller has just given the Herendeen Manufacturing Company the contract for a new steam heating plant to be installed in her greenhouses and dwelling.

PROFIT IS CERTAIN...

in the prudent and thorough heating of a greenhouse as much as in large sales of stock. If a florist is burdened by an unnecessary annual tax of from

$50 TO $100

for fuel and extra labor he must work much harder in order to make up this unnecessary tax out of the profits of his business. We know from our past experience that there is no unnecessary tax for fuel and labor when our boilers are used, because they are made after careful examination of the reasons why other boilers have failed and their construction avoids the defects shown. No one has bought

OUR BOILERS

that ever regretted it and thousands have bought and look back at the cost as the best investment they ever made.

SEE WHAT

these florists say:

S. L. BRONSON, New Haven, Conn., Jan. 4th, 1898, says: I have in my greenhouse one of your No 60 Standard Sectional Hot Water Boilers, bought June 28th, 1897. I find that its work is truly excellent and think it is the best heater I ever had. I can find no fault with it in any particular.

GEORGE BOYCE, Florist, Utica, N. Y., Jan. 31st, 1898, says: I have thoroughly tested the No 50 Standard Sectional Hot Water Boiler, bought of you last fall, and it is a pronounced success. It is very easy to raise the water to a high temperature and keep it so. The boiler is easy to operate and I can arrange the fire at 10 o'clock at night and find it in good condition at 7 o'clock in the morning, and by the use of drafts quickly obtain a new, bright fire for the day. The arrangements for cleaning are admirable, as every part of the boiler is accessible to the light and cleaning brush. You have certainly secured the right construction for a first-class greenhouse heater, and I can heartily recommend it to all florists.

OUR GREENHOUSE CATALOGUE

is free, and we are in business to give information about our boilers and heating greenhouses, and solicit correspondence.

WE CAN MAKE

prices delivered at any station, so that a florist knows exactly what the cost will be of a boiler selected.

THE OMAHA CONVENTION.

The fourteenth annual convention of the Society of American Florist opened at Omaha on Tuesday morning, August 16, 1898, with an attendance larger than was anticipated. The delegations from western sections were more numerous than early correspondence had led the committees to expect. The east did not turn out as in former years, but was, nevertheless, well represented. There were many women present.

A. Donaghue, Sr., president of the Nebraska and Iowa Florists' club called the convention to order and introduced Rev. Thomas J. Mackey, of All Saints church, who, in his invocation, prayed that those who improve the beautiful plants and flowers of God's creation may themselves improve and grow to the stature of perfect men.

Mayor Frank E. Moore, of Omaha, then welcomed the convention in a ringing address. He said in part:

Mayor Moore's Address.

GENTLEMEN OF THE SOCIETY OF AMERICAN FLORISTS:—It gives me pleasure as the representative of the citizens of Omaha to extend to you a cordial welcome to our city. As I look into the faces of the delegates here present I can readily believe that the very flower of your organization represents your society to-day. It has been said that "in eastern lands they talk in flowers," and if I but knew that mystic language I would express my sentiments on this occasion by presenting to the Society of American Florists a garland which would be redolent with the sweet perfume of hospitality.

We have had numerous societies and conventions meet with us this summer. Some have sought to develop a stronger physical manhood and womanhood, others have met to devise fresh advances in educational methods, others have discussed the possibilities of future development along technical lines, while still others have met in the cause of sweet charity. The Society of American Florists differs from all these in that it seeks to promote and enhance those beauties of nature which appeal through the eye to the æsthetic sense.

Gentlemen, I congratulate you upon the work which your society has accomplished. Let it be your object to aid nature, not to subvert it. The grace and symmetry of nature is better than the stiffness and heaviness of what is sometimes called art. The highest art in floriculture and horticulture is that which makes the most of nature. I have been pained occasionally when I have seen the stiffness, precision and exactness which have characterized the methods pursued in arranging the trees, shrubbery and flowers in some parks. Such parks are no parks at all. I believe that the influence of nature as expressed through the trees, the flowers and the green grass, has saved our cities more money in jails, reformatories and almshouses twice over than they cost. The person who delights to frequent the shady park and see Mother Nature face to face is no miser, for nature floods his heart with feelings of humanity.

We are very glad to welcome the members of the Society of American Florists because of what they are doing in their respective localities to comfort the bereaved, to cheer the sick, to give hope to the disheartened and to bring joy and contentment into the lives of rich and poor alike.

And now, gentlemen, to better express the welcome we would extend to you I present you with these golden keys of the city. Use them early and often and if they wear out I will furnish you with another pair.

I bid you welcome.

E. M. Wood's Response to the Mayor.

THAT IT MAY PLEASE YOUR HONOR:—The hearty kindness of your welcome, and the gracious terms in which it is expressed, sink deep into our hearts. Permit me to say, in the words of Hamlet, "Beggar that I am, I am even poor in thanks; but I thank you."

We are here today, sir, pilgrims from almost every state in the Union, and from cities of the bordering Dominion of Canada, who are proud to pay our annual tribute upon the altar of our patron Goddess, Flora, and to deliberate upon the welfare of the association which we have so much at heart. And I may perhaps be permitted to say, sir, that we have another claim upon your kindness, inasmuch as we represent, and this in itself is a proud distinction, the premier body of gentlemen, for which we have no less an authority than the immortal Shakespeare,

who said, "There is no ancient gentlemen but gardeners; they hold up Adam's profession, for he was the first that ever bore arms."

But, sir, in speaking of and for my professional associates, I would indeed prove ungallant were I to make no mention of the ladies who accompany us, who are a part and parcel of us, and who, in themselves, are the most enthusiastic, as well as the greatest lovers of all that is beautiful. Ah, sir, what could we do, and how could we get along without them?

It was a happy thought, as well as a wise and far-seeing provision, which induced us to make at the present time our sojourn in your famed, your hospitable, and your beautiful city, and we find ourselves more than delighted at being here present with you today. Why, sir, it seems but yesterday since you were a village, almost unknown, while today you are a thriving community, with untold wealth, and with a fame and a name which is carried to the uttermost parts of the world.

Your efforts to organize a Trans-Mississippi Exposition and its phenomenal success has filled us with admiration. To have made the attempt and to have succeeded after the great Chicago exposition required not only courage and energy but a confidence in your ability to accomplish so stupendous a work. It is a marvel.

I have said, sir, that nature has done much for you. Will you permit me to say, without egotism, that we are doing much for nature, inasmuch as we profess an art which aids as well as improves nature.

We are here, not alone for the purpose of carrying on the affairs of our association, but at the same time to show the glory of our art and to display, as we do from year to year, the strides we are continually making in the art of floral culture. It is a work worthy of all consideration, of all commendation and of all encouragement, and we beg for it the kindly countenance of all lovers of the beautiful, with the assurance that the aim will ever be to make the "thing of beauty a joy forever."

I am sure, sir, that for the brief time we shall be with you, our lines shall lie in pleasant places. For yourself, and the noble city, of which you are the executive, I beg you once again to accept our most profound thanks, and to rest assured that you and yours shall have an abiding place in our memories up to that supreme moment when for us time shall be no more.

President Gude's Address.

LADIES AND GENTLEMEN, MEMBERS OF THE SOCIETY OF AMERICAN FLORISTS:—Goethe, whose poetical imagination permitted him to strew "Flowers of Rhetoric" around and about him, as well as probe into the mystery of the metamorphosis of plants and flowers, and observe closely the evolution of shape, color, and function, is well entitled to his prerogative of such figurative generosity, but it never should be expected that "Flowers of Rhetoric" could ever be conceived, cultured, and culled by the president of the Society of American Florists and Ornamental Horticulturists, organized to deal with substance, not shadows, with real earth, and not with ethereal elements of poetry. And yet, who has more beautifully entered into the subject, in presenting an annual address to you, than our worthy and much loved president of a few years ago, brother W. R. Smith, and my immediate predecessor, Adam Graham, of Cleveland.

Therefore, in presenting to you this address, as a practical man fully imbued with all of the interests of our society, filled with the sense of realization as to its great importance now and in the future, I come with my greetings to you in practical words expressing practical thoughts.

First, I congratulate you upon the choice that you have made in your meeting place, enjoying, as you are, the generosity, kindness, and whole-souled hospitality of this growing city of the middle west, which, in comparison to its population, has demonstrated since it has been recognized as a city more "push" and enterprise than any other city in our country. It has opened its doors to assemblages of all kinds and natures, and entertained at its boards conventions, conferences, expositions, fraternities, and shrine caravans, which have made the name of Omaha known not only in our own country but throughout the civilized world. So to-day we must feel somewhat the pride of being the guests of not only those who are members of our society, but all who are interested in floriculture and in the progress and prosperity of this city, and it must be a gratifying fact for you all to realize that from every section of our country representatives have come in such large numbers to enjoy this reunion and the pleasure of being at Omaha.

The organization has been well favored this year in having a most efficient Executive Committee, which in the interim since the last meeting has been not only the deliberative, but likewise the legal body of our society.

It is usual that the Executive Committee shall hold its preparatory meeting prior to the annual assemblage of the society in the city in which the session is contemplated. For many reasons this custom was not followed and the meeting was held at the National Capital, with the hope that the presence of our representatives would have some influence upon Congress in securing action upon the national charter, which has been so long anticipated, and to which my predecessors have referred with a great deal of feeling and in terms of considerable eloquence. But legislation on this bill had to give way to war appropriations, "Free Cuba" speeches, and annexation treaties, so we submissively allow our matter, in sense of duty to our country, to go over until Congress meets again, when we are assured that it will be a fact and become a law.

I need not assure you of your many friends in Congress, both in the House and in the Senate, and that the object of chartering an organization such as ours has, to its great credit, become that of national consideration because it is of national interest. The sentiment, too, has found its way into the executive circle, and among the advisors of the president in his cabinet we have there also our champions. No greater friend, however, has ever been in public life than the present Secretary of Agriculture, James Wilson, who in response to the Hon. Redfield Proctor, of the U. S. Senate, addressed a letter which I cannot refrain from embodying here in full, because it expresses, in stronger language than I could possibly command, ideas and purposes which are clear in statement and convincing in reasoning, and I feel sure that you will certainly appreciate my reading it to you, coming as it does from one as able and as distinguised as Secretary Wilson.

April 28, 1898.

HON. REDFIELD PROCTOR,
United States Senate.

MY DEAR SIR:—Your favor of April 20th, enclosing a copy of Senate File 4415, "An Act to Incorporate the Society of American Florists and Ornamental Horticulturists," is received.

The object of the bill is to create a body corporate and politic in the District of Columbia, by the name of the Society of American Florists and Ornamental Horticulturists, for the elevation and advancement of horticulture in all its branches, and increase and diffuse the knowledge thereof; and the said Association proposes to report from time to time to the Secretary of Agriculture, so that their proceedings may be communicated to Congress.

I believe this is a useful and valuable act. The last Congress thought so; President Cleveland did not. This Association will operate along the whole line of elevating the taste of our people. I believe their work is a means of grace. It is healthful to people to ornament their homes, their lawns and their surroundings generally. A love of the beautiful was implanted in the hearts of all of us by the Master, who, when he was on earth, called our attention to the lilies and asked us to consider them. This Association proposes to cultivate that sentiment.

I am endeavoring to introduce new flowers into different latitudes of the United States, from wherever I can find them in the old world. The work of this Association will be helpful to the department, I have no doubt. We pay a great deal of money to foreign countries for bulbs, seeds, etc., because we love the beautiful. My work here is entirely utilitarian. I desire to have, and will have, through the wise appropriation of Congress, bulbs, seeds, etc., brought here from foreign countries and produced here, so as to save our people very large sums of money now being sent abroad for these things. I consult with certain of the gentlemen named in this act, with regard to these importations, and get much useful knowledge from them. The people will gratify their love for the beautiful in flowers and shrubbery, and I desire that these things be grown in the United States. The Bermuda lily is an illustration. We pay a very large sum of money to foreign countries for the bulbs of that lily. I have set technical scientific divisions of the department at work studying the diseases of that plant, and to get information for the people regarding the localities that may produce it at home, and save the money now paid out for it. While my main objects are the saving of money to the American people, and the procuring of information for our producers all along the line, so that they may produce more economically, I recognize the great assistance the department will get from these gentlemen, who study decorative plants, and so I would be greatly pleased to see you push this bill and encourage this Association by giving them a name and a place in our statutes and recognition by the United States. Very truly yours,

JAMES WILSON, Secretary.

This is not a matter of sentiment from this gentleman to gain favor of you and yours, nor is his interest measured by any glorification whatever that he might possibly get out of it, for he has demonstrated by his great practical work, his interest in agriculture, in horticulture and in floriculture, as through his instrumentality and his influence, and his practical work and encouragement, has the Ames Agricultural Institute at Ames, Iowa, his home, become the standard agricultural institution in our whole country. I say all glory to this worthy inspirer of thought and encourager of action in all that pertains to the subjects in which we are so heartily interested.

Never has there assembled anywhere to consider any matter a more intelligent, painstaking and interested company of gentlemen than those composing your Executive Committee that held its meeting in Washington. Every subject of interest to the society was considered, and many practical suggestions are the result of this conference. Among them is the suggestion, presented to you as the sentiment of the Executive Committee, to have certain new departments under the supervision of the society, which I take pleasure in submitting for your consideration.

The Department of Credit Information, the duty of which shall be to ascertain the financial standing and credit of persons in the trade, should be under the

WILLIS N. RUDD, PRESIDENT-ELECT OF THE SOCIETY OF AMERICAN FLORISTS.

control of a committee of three appointed by the president with the approval of the Executive Committee. This subject, to my mind, has its advantages and disadvantages. It may redownd to the credit of the organization to endeavor to keep within the great active working body of its members throughout the country a certain *esprit de corps*, with regard to honesty and fair dealing. Oftentimes, by reason of misrepresentation, much embarrassment and loss is caused to our members, and, indeed, to the outside world, all of which reflects in part upon the association at large. Integrity first in all things should be our motto, and that would cause all dealings of every nature and kind, and with every person, to be had with a due regard for honor. On the other hand, we might say that all who are members of our society possess sterling integrity and in the highest sense, and that for a moment to question financial standing and business intercourse is an undue and untimely interference in the affairs of private individuals. Such is the position that I should love to take upon this subject, but none of us are infallible, none of us are stronger than our weakest part. Temptation is a wily, seductive member of the cabinet of his satanic majesty, and who can gainsay his mysterious power and winning faculties when visited with full force upon some of our non-suspecting and susceptible members?

But especially do I commend to your favor the Department of Co-operative Purchase, the object of which is made manifest, as it will secure for the members of the society reduced prices upon greenhouse supplies, which can be afforded by the co-operative purchase in large quantities. This would be under the supervision of a special committee, but would put no responsibility whatever upon it in the matter, except in obtaining from the furnishers prices upon large quantities, and then to impart such information received to the members of the association who would enjoy such advantage as would arise therefrom.

There is also suggested a Legislative Department, which would have charge of all legislation, state and national, concerning the departments represented by our organization. A general committee could have sub-committees in every state in the union, which would be constantly on the alert for the advancement of our interests and present the same to the various legislatures. This would have an effect not only upon floriculture and tree-growing, but it would also have its influence in effecting the exportation rates to growers upon the various common carriers in our country.

Also, an Arbitration Department, which, as the name implies, would be for the amicable adjustment of controversies between members, saving oftentimes long litigation at court, and much notoriety of an unpleasant nature which would reflect not at all well upon the credit of the individuals engaged. This would be productive of peace and good feeling, and a committee appointed from your own members would have the interest of the individuals at heart and would settle all differences, whether financial or otherwise, with a due regard both to law and equity; and lastly, a Claim Department. This would have among its duties the adjustment of claims against transportation companies, which, to some of our members, would be a subject of considerable import. While in some sections the fairest treatment has been meted out by these companies to our organization, yet in other sections it has been simply a continuation of oppressive rates, surrounded by all the disadvantages of delay that can possibly come through incompetent service. It is a surprise to you, and was a surprise to the Department of Labor, when approximating the statistics of the amounts paid by florists for transportation, to find that it reached up into the great lines of figures that expressed many hundreds of thousands of dollars. So, therefore, a florist, while estimating the cost of the simplest flower produced by himself, is obliged to add oftentimes as much as twenty-five per cent to the cost in the item of transportation in sending it to his customer.

"Honor to whom honor is due" should be the motto in all honest emulation. The more difficult the prize, in the attainment of it the greater the reward; the stronger the foe, the greater the victory.

It has been suggested that our system of awarding certificates of merit and honorable mention is a little too lax, and awards have been made too freely and without that close scrutiny and just determination which should be devoted to the subject of awards. When the certificates are issued by this organization they should mean something, and the more difficult they are to obtain the more they will be appreciated by the holder and the more they will mean to the outer world. This may be regarded by you as a suggestion which, if it meets your favor, might at this session bring forth some definite action which may govern this matter.

While the general subject of floriculture is constantly before us, individually and collectively, I am of opinion that especial attention should be given to the bulb culture in this country, a business feature that would keep many thousands of dollars within our own domain and add greatly to one of the most lucrative and comprehensive products of our industry. The Roman hyacinth especially is commended to your consideration for personal devotion at home.

In the southwest we have a great state, Texas, as large as an empire (it is called the "Lone Star State"), sending forth at the proper season its sweet perfume of Cape jasmine, which, could it reach far enough, would waft its delightful odor over its sister states. Its climate and its soil are such that if a great Chinese wall or a mountain barrier shut off this state from the rest of our country, it could successfully grow almost everything that the earth produces. It is in about the same latitude as the islands of the sea around which now war's alarms are sounding, and its rich lands, widespread as they are, offer a welcome to our profession.

The tuberoses and the gladioli once were upon the import list, but now, as you well know, they are exported in great quantities to various countries, and bring the revenue therefrom this way instead of leaving it abroad. The crocuses, polyanthuses, and the narcissi are candidates for your kind solicitation and tender care.

The calla lily, which once knew only the confines of the narrow space of their pottery homes, now is reckoned as a free-earth, open-air California product, side by side with the freesias, which, under basking Pacific suns and fanned by the Pacific air, is successfully developed and grown. The Lilium longiflorum and L. Harrisii should also be sent from this country abroad, instead of having them seek their way to our shores. We will have, in the near future, araucaria factories, as we already have various rubber factories, not for rubber shoes nor mackintoshes, but the beautiful ficus, which is marvelously well grown by our well-known "Deacon" Harris, of Philadelphia, who was the first life member of our society. Forty years ago there were only eight Latania Borbonica palms in the United States; to-day there are upwards of three million as potted plants. It is said that only two of these palms have borne seed, one belonging to the Federal Government and the other to the Corcoran estate, both of them in Washington, District of Columbia, and from these two plants no less than sixty thousand young palms and seeds have been distributed throughout the cities and territories, which coming from the United States Botanical Garden may really be attributed to the one seeding plant rather than to the two.

I think also that generosity should be one of the virtues of the florist; that is, he should not be too narrow and selfish in the matter of discoveries. Being united for our common good, should entitle the widespread distribution of thoughts and ideas concerning plants and flowers in every particular, so that a new and rare plant in one section should give the benefit of its beauty and of its rarity to all interested in the art throughout the whole country.

The time will come when the flower that is "born to blush unseen" will be receiving the adulation of countless thousands of our people. The evolution of the field daisy, once a common weed, and the chrysanthemum, with its hundreds of varieties of gorgeous development, are probably two of the most wonderful exemplifications of what may be done by concentration of thought and by experiment. Who knows but that the microscopic flowering plants of the prairie may in coming years become the glad adornment of the richest feasts? Who knows but that the tiny forget-me-not, with its sweet delicate shade of heaven-reflected blue, may become a giant flower in company with those representing the hardiness and strength and the beauty of some of the greatest botanical specimens?

Referring to strong flowers, color to the eye is the indication of force and strength; therefore red flowers should be more in evidence—the rose, "Queen of flowers," the red poppy, the red dahlia and red carnations. Then also, as the coming flower, the orchid, marvellously mysterious in its growth, most delicate in its formation, and most exquisite in its tinting, should receive more general study in its cultivation. Hydrangeas, in their numberless varieties, for outdoor ornamentation, and hardy-blooming plants for out-of-doors, form one of the grandest opportunities for a profitable field of labor in the future.

It is useless, however, for me to take up your time with these suggestions, as who among you is not familiar with the subject we so dearly love and of which we are so great a part? Individual interest and advancement mean our united progress. With genuine interest each should enter into the knowledge, by any one of our members, of any discovery or any advance in the development of floriculture that may be made by him.

Our art has become one of the great bread-winners in the country and for the country, and its increase naturally becomes a matter of national interest and national pride. It is your duty to encourage the taste that is being manifested everywhere for the love of flowers and for the use of them. Show me one who cultivates flowers and beautifies the domestic hearth-stool, and I will show you a home in which love prevails. Show me devotion to the growing plant and the budding rose, and I will show you maternal and paternal devotion in the rearing of the children of the home. Show me flowers without, and I will show you the presence of education and the taste and culture that belong to them within.

There is no more potent antidote to evil thoughts, corrupt natures and low sensuality than the adoration of the beautiful; and what can lay greater claim to all that is expressed by the word "beautiful" than flowers? They are present in our midst upon almost every occasion, be it joyous or sad. The wedding bells ring out their glad sounds of greeting; all around and about the bridal pair are the ornamentations of loveliness and floral beauty. The muffled tolling of the solemn bells in mournful strains, indicating the passing away of a soul—and there, too, we find the tributes of love, affection, and respect, and tokens of sentiment expressed in flowers. Come to the happy feast, where the songs are sung and the wine goes round, and there, too, shedding forth the lustre of their beauty and speaking words of welcome and hospitality, are the sweet products of our art.

Increase the love of flowers, develop the taste, and in that proportion is the demand greater. The business grows necessarily with the demand; therefore it behooves you to strive that this end may be attained. There is no better place to set a good example than in and around and about your own homes and gardens. A shoemaker, it is said, keeps the poorest shoes upon his own wife's feet. Such reputation as that should never be attributed to the floriculturist. Become a part benefactor on your own premises, as he who plants a tree or flower, or cultivates a spot of ground, is a benefactor, because the result being a delight to the eye contributes to the pleasure of mankind. Don't fear the criticism of advertising the business, as there is no occupation that could possibly be purer, more benevolent or more god-like than our own. Therefore it is not with shame but pride that all of you, at this occasion, at every place and in every section, and among all people, say "I am a florist."

You should "let your light so shine before men that they may see your good works." If London can produce monthly a great flower exhibition, surely there is no reason why America could not have annually, at some great metropolis a flower exposition, wherein the whole country could join; and before concluding, I trespass this suggestion upon you that steps will be taken here at this meeting looking to carry out this idea.

In conclusion, while not endeavoring to enter into sentimentality, I may be pardoned if I trespass a little into the poetry of our art, and speak in the language of the flowers the sentiment of the hour.

First, to woman. Our devotion to her should be next to that to our Creator, but I cannot pay more pleasing compliment to her than to spread at her feet "the Austrian Rose," which silently expresses this sentiment, "Thou art all that's lovely!" Woman!—our mothers, our wives, our sisters, and our sweethearts—how grandly glorious thy mission!

"To give to society its highest taste—
Well ordered home, man's best delight to make—
And by submissive wisdom, modest skill,
With every additional care, deluding art—

To raise the virtue; animate the bliss,
And sweeten all the toils of human life:—
This be the female dignity and praise."

Next in adoration, Our Country. The sound of strife is never welcome, but the call to duty fell not upon deaf ears in the brief arbitrament of arms through which we have just passed (and I beg to indulge the hope completely and entirely passed), as alike to the victorious and to the vanquished, it has about it much of sorrow, hardship and tears, for the booming of cannon and the rattle of musketry is always followed by the sound of muffled drums and the music of funeral dirges.

We express the return of peace with the Olive, which has mythologically been sacred to Minerva, and always the emblem of peace since before the Ark rested on Mount Ararat. Many of our flowers have mythological creations with most beautiful legends. In the dispute between Minerva and Neptune it was decided by the gods that whichever of the two should give to the inhabitants of the earth the most useful present, great should be the reward. The olive was brought by Minerva, being the emblem of peace, which was decided to be far superior to Neptune's horse, the symbol of war and bloodshed. The olive, then, to-day be with you, and could I stand and figuratively throw out the emblem to all parts of the country and to the whole world, I would now waft myriads of leaves and let the winds carry them to the uttermost parts of the earth.

And now, once more; to those who have fought the nation's battles, and who are returning again to their firesides to transpose the weapons of war into the ploughshare and pruning hook, we offer the nasturtium, which is "a warlike trophy." And so, with the bard—

"We bring flowers to strew in the conqueror's path:
He hath shaken thrones with his stormy wrath.
He comes with the spoils of Nations back;
The vines lie crushed in his chariot's track;
The turf looks red where he won the day;
Bring flowers to strew in the conqueror's way."

Finally as peace hath its victories as well as war, go on with your honest emulation in endeavoring to inspire a greater zeal and interest in your organization, a more widespread knowledge of our art, and wherever it is possible to cultivate a love of it among the enlightened and progressive people of this our glorious country.

Secretary's Report.

MR. PRESIDENT AND MEMBERS:—I am glad to be able to report a prosperous year for our society, in which we have not only held our ground, but made, also, a slight gain over the record of the two preceeding years. The new method of assessing and collecting annual dues which went into operation with the beginning of the present year, simplifies the work of collection and the discontinuance of the cumbersome delinquent list removes a prolific cause of friction. As

HORTICULTURAL HALL, TRANS-MISSISSIPPI EXPOSITION.

to the effect of the new system on our treasury, it is yet too early to say and in the present transition period practical and useful comparisons of past and present conditions as to finances or active membership cannot be made.

One hundred and thirty-five persons who paid in 1896, had, up to August 10, 1898, neglected to respond for 1897 assessment.

The number of assessments collected for 1897 was 504, of which 108 were from new accessions and twenty-five were renewals of membership by former delinquents, each of the latter paying $2 extra for the privilege.

The additions were credited to the different states as follows: One each from District of Columbia, Georgia, Illinois, Indiana, Minnesota, New Hampshire, Nebraska, Virginia. Two each from California, Maine, Wisconsin. Three from New Jersey. Four from Ohio. Five from Connecticut. Seven from Rhode Island. Twelve each from Pennsylvania and New York. Fifty-one from Massachusetts.

Four deaths have been reported since we last met: Morris A. Hill, Ansonia, Conn., died on May 27.

Thomas Cartledge, Philadelphia, Pa., May 17.

H. Karlson, Exeter, N. H., July 4.

Philip Wieland, Boston, Mass., July 8.

The Providence convention was a memorable one, creditable alike to the society and to the local florists and gardeners of Providence and Newport. Its history has been fully told in the annual report of our society and nothing in connection with it requires special mention at this time, except that some of our members were once more made victims of an untrustworthy photographer who collected money for pictures that were only delivered months afterwards and under pressure exerted through the secretary's office.

The trade exhibition at Providence was a large and comprehensive one and managed with great ability. The competition for the society's medals brought out some exhibits of the highest educational interest, notably that of home grown rhododendrons and azaleas. The visit to Newport's lovely gardens was equally valuable as an object lesson.

The printed list of new plants introduced to the American trade in 1897, as ordered by the society, required much labor in compilation but appears to have been a good move, and the lists of succeeding years will be more easily done and also more complete. There is a strong demand for a system of official registration of names given to new varieties of plants on lines similar to the plan adopted by the American Carnation Society. Your secretary believes that something of this kind should be provided for at this meeting.

Our life membership fund has been subscribed to by fourteen members. It was hoped that this list would have reached larger proportions by this time—forty or fifty at least—so that we might start off with a substantial permanent fund.

Railroad transportation has been a most annoying and tedious problem this year. The railroads have moved cautiously because of the entanglements that would follow rate cutting to the exposition and the concessions which were finally granted us, although very satisfactory otherwise, came too late to materially effect our attendance from distant points.

Rarely since the formation of this society have we seen so much interest manifested as was shown by those present at the executive committee meeting at Washington last spring. The holding of the general session of the committee at a place other than the location of the next convention, for financial reasons which the committee well understood, and the reference of local convention arrangements at Omaha to the president, vice-president and secretary, although productive of some unfavorable comment at the time, is now generally conceded to have been a wise course under existing circumstances and the question arises whether this plan or a modification of it might not with advantage be followed regularly hereafter.

On the most important result of the committee's deliberations, the proposed new special departments of purchase, credit information arbitration, claims and legislation, our programme calls for action at tomorrow's session. The importance of careful deliberation in deciding whether the society should strike out into these new fields of endeavor, must be apparent to all and it is greatly to be desired that every member in attendance should be present at this and every other business session and do his part toward shaping wisely the future policy of the organization.

The special field in which the society labored so well in its young days is now pretty well covered by our enterprising trade journals and we are called upon to move on to live issues. Just in proportion as we keep in close touch with the practical business problems and present needs of the florists of America so will the shifting character of our support and membership be removed, we shall be strong where we are now weak, and we

shall obtain the desired permanence and stability.

We meet this time in a locality far remote from the scenes of our past activity and the wisdom of this new departure has naturally been the theme of some discussion. Upon what we do here, we shall be judged. Let it not be said that we are triflers. We are here to do something useful, let us all attend to that first, earnestly and in order. The Midway will still be in the same place when we get through and we can enjoy it all the more in the consciousness of having shown due courtesy to one another and performed our duty to the society, and to our fellows throughout the country for whose interests we profess to work. If, as has been said, "The S. A. F. is heard from but once a year," let that once be loud and strong this time. Whether the Executive Committee, in its recommendations, has struck the right chord, is for you to determine. If their views as to the society's scope and its power for good do not appeal to your sound judgment, give us something that does, and let us not think of adjournment until something practical has been accomplished and the long sought key to the united support and sympathy of our profession throughout the land has been found.

And, gentlemen of the west, do not forget that to the secretary's eyes the best evidence of prosperity is found within the covers of the roll book. A steady decrease in the membership means that something is wrong. We want you, not only to join us, but we want you to stay. You have the opportunity to set a good example and let the country realize that so far as your influence goes, the society is no longer forced to depend for sustenance upon the temporary affiliation of the man in whose neighborhood the organization may happen to convene.

Should our visit to Omaha help to win for us your enthusiastic loyal support and active co-operation and at the same time infuse us with a little of the courageous, resourceful spirit which dominates the hustling pioneers of our business in the vast, undeveloped Trans-Mississippi country and of which we, as a society, stand so greatly in need, then, indeed, shall we have reason to applaud the good judgment and foresight that selected this as our meeting place, and the convention of 1898, in the record of the good work accomplished, will stand pre-eminent in the annals of our beloved society.

Treasurer's Report.

H. B. Beatty presented the following statement of the finances of the society:

Cash on hand Jan. 1, 1897	$1021.19
Receipts	2035.00
Total	3056.19
Disbursements	1899.30
Balance	1156.89

State Vice-Presidents' Reports.

ALEX. WALLACE, New York:—Perhaps the surest indication of material progress is the amount of greenhouse building now doing in my state. As to the outlook I will quote C. W. Ward, of the Cottage Gardens, who says: "Regarding immediate prospects for general business, they seem to be pre-eminently favorable. The balance of trade is phenomenally in our favor. Our visible crops are usually large. A great proportion of our wealthy traveling population have remained at home, and as a consequence will purchase much at home that they have heretofore purchased abroad. Foreign consumers will need our products at a fair price. New markets will unquestionably be opened as a sequence of the war, and our older foreign markets will be amplified in some countries. Weighing the favorable and unfavorable conditions against each other, the favorable seem so strongly in the ascendency that it seems safe to prophesy a highly prosperous business era commencing with the usual fall opening of business, and I see no reason why the florist trade should be denied its full share of this prosperity." Of prime importance to the trade was the success which attended P. O'Mara and Messrs. May and Allen in their efforts to have a clause inserted in both federal and state statutes exempting florists' stock from the provisions of laws designed to prevent the spread of disease in trees and plants.

W. F. KASTING, Western New York.—I find an increase in the use of plants for dwelling houses, but see a demoralization of business in bulbous stock. I think that many wholesale growers would find a remedy for poor prices by growing plants and flowers in diminished quantities. I also suggest a more central location than that of the present year for the annual meeting, and commend efforts in behalf of the Fire Association and deprecate the department store evil.

S. D. DYSINGER, Minnesota.—There is an era of good prices and greater demand. We have had a mild winter and a splendid growing season. Prosperity is at hand. I regret a decline in interest in our state floricultural society and desire to testify my appreciation of the value of the S. A. F.

Other reports were made by Wm. Gammage, of London, Ontario; J. V. Merrion, of Illinois; Jos. Heacock, of eastern Pennsylvania; Alex. Galt Robinson, of Kentucky; D. McGillivray, of Vermont; A. Herrington, of New Jersey; Thomas Gunson, of Michigan; Mrs. H. E. Charter, of Connecticut, and Gustave Ludwig, of western Pennsylvania.

Sympathy for Mr. Smith.

President Gude spoke in kindly and sympathetic terms of the recent serious illness of Wm. R. Smith, of Washington, D. C., who had invariably attended the annual meetings. He also conveyed the welcome intelligence of that gentleman's reported convalescence. On motion of Robert Craig, of Philadelphia, resolutions of sympathy with and encouragement to Mr. Smith were unanimously voted and ordered to be wired to him.

Report of Nomenclature Committee.

TO THE SOCIETY OF AMERICAN FLORISTS.—Your nomenclature committee for 1898 respectfully submits the following report:

Early in the season the chairman of the committee sent to the principal trade journals a note requesting that cases of misnaming, double naming and the like, or other matters properly coming before this committee, might be promptly reported to its chairman, and some weeks since a similar request was mailed to each member of the committee. In response to the requests the appended letters have been received and they are hereby made a part of this report, in which their substance is incorporated.

Botanical nomenclature unfortunately is in a transition state at present and no little difference is observable in the usage of writers on plants, so that it is not at all surprising that the same species or natural variety should frequently occur in the catalogues of dealers under two or more of the names by which it is known to botanists. In 1893 it was made the rule of the Society of American Florists, on the advice of the nomenclature committee for that year, that in such matters the Gardeners' Dictionary of Nicholson, or, on its completion, the compendious Index Kewensis, should be followed in the acceptance of strictly botanical names, so far as practicable. At that time it was also decided by the society to prepare and publish a full catalogue of the decorative plants handled by the American trade compiled on this basis, so that the trade catalogues might more readily be brought into line; but unfortunately for this purpose, in view of the expense involved, it was decided by the Executive Committee at the Pittsburg convention that it would be impracticable to publish the catalogue, the clerical work for which had largely been completed by that time. As a result uniformity in the use of Latinized plant names by the trade is still as far from being an accomplished fact as it was before the society's rule was adopted, though it is believed that more care is taken in this respect than formerly.

It is a matter for congratulation that such difference of usage as is observable in the catalogues of the country is apparently attributable to the prevalent diverse custom of botanists rather than to an effort by dealers to make an old and familiar plant appear as a novelty by offering it under an unfamiliar name.

So far as your committee are informed, no reprehensible misnaming or double naming of florists' varieties requires presentation to the society at this time. The few cases noted in this report are rather the result of accident or perhaps of over enthusiastic zeal to distinguish favorite seedlings which, while they may be separable by skilled specialists, are scarcely to be regarded as distinct from other and earlier varieties, so far as the practical needs of the trade are concerned. In the following the first mentioned is recognized as the proper name:

Chrysanthemums—Jeannie Falconer or Peter Kay, Miss Agnes L. Dalskov or Ivoiry Rose.

Fuchsias—Gracieux or Little Beauty.

Roses—Climbing Kaiserin or Mrs. Robert Peary.

Considerable uncertainty is reported to exist with respect to the ready separability of some of the recent yellow and bronze sports of the chrysanthemum Mrs. Jerome Jones, and some contest may result as to the names which are entitled to recognition; but as this matter is at present in the hands of the Chrysanthemum Society of America for examination your committee is not now prepared to report further on it.

In conclusion, your committee wish to suggest to propagators the desirability of promptly registering with the proper committee of the society, or with the appropriate auxiliary society, any new varieties they may decide to offer to the trade, thus avoiding possible contest subsequently. And they would also call the attention of originators of new varieties to the confusion which is caused to the cut flower trade by the too common adoption of the same name for, say a rose, a carnation, a chrysanthemum, etc.

Judges of the Exhibits.

President Gude announced the following list of judges to pass upon the displays in the trade exhibit:

Class A, plants—Edgar Sanders, Philip Gauges, W. E. Kemble.

Class B, cut blooms—D. B. Long, A. S. Swanson, William Miller.

Class C, boilers—E. Weinhoeber, W. H. Elliott, John Wunder.

Class D, greenhouse appliances, etc.—George L. Miller, George M. Kellogg, Robert George.

Class E, florists supplies, etc.—J. T. Temple, C. G. Anderson, Jacob Schultz.

Class F, bulbs and seeds—Emil Schray, William Clark, C. G. Weeber.

Class G, miscellaneous—Edgar Sanders, Emil Schray, E. Weinhoeber, J. T. Temple, D. B. Long, George L. Miller.

Committee on medal awards—E. G. Hill, Robert Craig, William Scott.

Reception at Lininger Art Gallery.

Tuesday afternoon was the occasion of a largely attended reception at the Lininger Art Gallery. The remarkable collection of paintings and statuary, said to be worth nearly a half million dollars, was greatly admired. Mr. Lininger's daughter, assisted by several Omaha ladies received the guests. Lunch was served and cigars.

President's Reception.

President Gude's reception to the delegates and their ladies on Tuesday evening was followed by a lecture on "Russia" by Professor F. W. Taylor, Superintendent of the Horticultural Department of the Trans-Mississippi Exhibition. Speaking from actual observations made in 1892 and 1896 in trips from St. Petersburg to the Black Sea and from the Polish frontier to the Ural Mountains, the lecturer corrected some popular misapprehensions as to the severity of the climate and the hardships of Siberian exiles. He said he did not see a single convict in all his travels. Good crops and splendid fruits were produced in a more northern latitude than our own. The people, though in the main illiterate, were contented and loyal. The public buildings, kremlins, universities and churches, surpassed in architectural beauty and size those of any other country. The primitive modes of travel by rail and along the Volga, the populous cities of Novgsrod and Moscow with their market scenes, and the characteristics of the Russian peasant, were also depicted. An idea was given of the vast extent of the empire in Europe and Asia and finally an interesting description of the sage and sociologist, the world-famed Count Tolstoi.

The Fifteenth Convention.

The invitation of the Detroit Florists' Club met with a hearty welcome and the Society of American Florists voted to hold its meeting of 1899 in the metropolis of Michigan.

Fire Insurance Association.

The committee on the Florists' Fire Insurance Association reported that the organization had not received sufficient support and that the efforts made to give the trade insurance at first cost were threatened with failure. John G. Esler, president of the association, said it seemed to be a question whether the florists of the country were disposed to stand by themselves or help each other. He declared that if this lack of interest in the movement was to continue the association would be disbanded and the dues returned by the 1st of next January. Messrs. E. H. Michel, H. A. Siebrecht and W. J. Vesey strenuously urged the claims of the fire insurance organization. On motion of Mr. Siebrecht, a resolution was adopted pledging every member of the convention to carefully inquire into the matter during the present year with a view to giving it support and encouragement. The committee having concluded their labors, were discharged with thanks for their untiring and unselfish efforts.

Amendment to By-Laws.

A discussion followed upon the proposed amendment to the by-laws preventing the listing upon the official ballot of any candidate who had received less than ten per cent of the votes cast in the nomination, and upon vote the amendment was rejected.

Executive Committee Recommendations.

The convention then took up the recommendations of the Executive Committee for the establishment of new special departments, under the supervision of the society. The first was a Department of Credit Information, to furnish information concerning the business standing of persons in the trade. This was voted down.

The next recommendation was to establish a Department of Co-operative Purchase, to be managed by a committee of three, to be appointed by the President, subject to the approval of the Executive Committee. After remarks in its favor by Messrs. E. M. Wood, J. G. Esler, E. H. Giesy and W. W. Coles, and by Messrs. C C. Sanders and J. L. Dillon in opposition to it, the recommendation was adopted.

The remaining recommendations were adopted without discussion and the several committees in charge were continued for the year. They established a Legislative Department to discourage adverse legislation, state or national, and encourage legislation favorable to the trade; an Arbitration Department, to promote the amicable adjustment of controversies between members, when requested by parties interested to do so. Upon motion of Sec'y Stewart, the last named department was placed in charge of the special committee of the New York Florists' Club, headed by Mr. Patrick O'Mara. A Claim Department was also established to look after the adjustment of claims of members against transportation companies.

Report of Exhibition Judges.

Class A: Your committee finds five entries confined, to such ornamental plants as are suitable and may be required by retail florists in their business. H. A. Siebrecht has a very fine exhibit of palms in variety and size; arecas in variety, including some extremely well grown; also a quantity of small ferns suitable for filling ferneries, vases, etc.; and young plants very useful for small decorating. The St. Louis Cut Flower Co., a group of finely grown ferns, some of the large size Ficus elastica and a number of smaller miscellaneous plants. Siebrecht & Sons, a fine group of palms, ferns, pandanus and arecas; very fine plants. Wm. J. Hesser, of Plattsmouth, Neb., a group of palms, ferns, some cacti and also succulent plants.

Class B: Sunset Seed and Plant Co., of California, exhibit of upwards of ninety vases of sweet peas; a large assortment, including many new and distinct. A lack of substantial labeling prevented a careful judging of the individual varieties. Cushman Gladiolus Co., meritorious display of gladioli in great variety. Wm. H. Elliott, strings of Asparagus plumosus, including several more than twenty feet in length, the quality of which is highly commended. B. Haas, of Omaha, vase of gladioli. An exhibit of roses of seven varieties in vases was shown by J. F. Wilcox. (Mr. Long who passed upon this exhibit, states that many of the varieties were meritorious considering the time of year).

Class C: Boilers, none on exhibition.

Class E: Florists' supplies, etc.; the judges make mention of Mr. A. Herrmann's supply, also a display of florists' metal designs. Ellis & Pollworth have a creditable display of florists' supplies; cut flower boxes deserve special mention. D. B. Long, an exhibit of florists' photographic calendars, etc.; very fine.

Class F: J. C. Vaughan's Seed Store shows a very fine display of florists' bulbs.

Class G: Daniel B. Long, an assortment of stationery including a series of designs in various colors; altogether a novelty of merit as compared with previous exhibits. Dayton Paper Box Novelty Co., an exhibit of florists' paper boxes in various sizes. Boston Florists' Letter Co., an exhibit of samples of their designs in letters.

The report of the committee to award medals was submitted as follows: An exhibit of bulbs raised by Geo. Gibbs, in Orcas, State of Washington. It includes three varieties of narcissi, two varieties of iris, three of Dutch hyacinths and six of Roman hyacinths, crocus, yellow and white, tulips and four bulbs of Lilium candidum. The bulbs are all of very fine quality, being solid, heavy, well ripened, and in size comparing favorably with first-class Holland grown stock. The Lilium candidum deserve special mention as they are the largest and finest ever seen by your committee. The whole exhibit is extremely interesting and valuable as indicating the possibilities of bulb culture in some sections of America; awarded a silver medal.

Photographic business: Mr. D. B. Long makes an exhibit of various designs suitable for catalogue colors and other commercial purposes. The majority of the exhibits are of unique and original construction, and have, we believe, a decided commercial value, deserving the award of the society's silver medal.

Chrysanthemum Society of America.

Secretary Elmer D. Smith presented the following report at the session Wednesday afternoon, naming new chrysanthemums disseminated during 1898 as follows:

By John N. May, Summit, N. J.: Alice F. Carey, Chempwee, Dolores, Minnewaska, Miss Gladys Vanderbilt, Robert G. Carey, Spotswood.

By E. G. Hill & Co., Richmond, Ind.: Autumn Glory, Black Hawk, H. W. Longfellow, Solar Queen, Quito, Christmas Gift, Boundless Snow.

By Hugh Graham, Philadelphia, Pa.: Pennsylvania.

By F. Dorner & Sons Co., Lafayette, Ind.: Mrs. C H. Pierce, Snow Queen, Merry Christmas.

By Theo. Bock, Hamilton, O.: Mrs. Wm. B. Brown.

By G. P. Rawson, Elmira, N. Y.: Wm. H. Chadwick, The Yellow Fellow, Madeline Pratt.

By C. W. Ward, Queens, N. Y.: T. H. Spaulding.

By A. Herrington, Madison, N. J.: Frank Hardy.

By J. C. Vaughan, Chicago, Ill.: Yellow Mrs. J. Jones.

By F. R. Pierson Co., Tarrytown-on-Hudson, N. Y.: Mrs. O. P. Bassett.

By Theodosia B. Shepherd, Ventura, Cal.: Susan B. Anthony, Victoria, Theo. B. Shepherd, Viola, Miramar, White Wings, Dazzling, Fly-Away, Darling, Madonna, Firefly.

By McDonald & Steele, Crawfordsville, Ind.: Mrs. A. F. Wienold.

By E. J. Paddock, Cleveland, O.: Adam Graham.

By N. Smith & Son, Adrian, Mich.: Arline, Thornden, Merza, Rustique.

By W. N. Rudd, Mt. Greenwood, Ill.: Mrs. A. J. Caton.

Of the fifty-two seedlings exhibited before the committee, twenty-five scored eighty-five points or more and have been awarded certificates. The varieties are as follows:

Mrs. Arthur J. Caton, Boundless Snow, Solar Queen, H. W. Longfellow, Australian Gold, Bessie Hollis, Autumn Glory, Black Hawk, Pennsylvania, Mrs. O. P. Bassett, Frank Hardy, Chas. W. Crouch, Mrs. Sam'l Higdon, Snow Queen, Mrs. C. H. Peirce, Alice F. Carey, Robt. G. Carey, Spottswood, Miss Gladys Vanderbilt, Arline, Thornden, Rustique, Merza, Our Dear Friend, W. N. Chadwick.

Trade Exhibitions: Their Value to the Florist Business.

BY E. H. CUSHMAN, EUCLID, O.

[*Read before the Omaha Convention of the Society of American Florists.*]

The subject of trade exhibitions is of vital importance to every one of us who has anything to sell. They furnish a good opportunity for every plantsman and dealer, who would make a business success. They are a gathering of the same lines of business under one roof, for the purpose of showing what we have to sell, and giving an opportunity for comparison and the extension of business acquaintance, not otherwise possible.

These gatherings of commercial men with samples of their goods, in conjunction with a large gathering of consumers of those goods, is one of the very best advertisements possible. The wide awake and practical soon get the rough corners worn off at these shows, and usually the conceit taken out of them, if they have any. There are so many good things in connection with these trade gatherings, I am sure it is a poor man who does not get value received for exhibiting or attending our conventions.

Just cast your eyes about in the Trade Hall, and see what a busy place it is. What introductions these exhibits give. Men who never would find each other, do so when they see the trade sign out, or they are interested in the same line, and fall to conversing about it. In this way many pleasant business and other relations are formed, which terminate only when the mortal part is put to rest.

Gentlemen, I do not wish to be cranky on this subject, but our trade shows have done so much for me, and I see such possibilities in them for others and the trade at large, that I wish as far as possible to create greater interest in this vital organ of the S. A. F. I ask you, gentlemen, to throw your efforts for the building up and improving of this branch of our work. What the eye sees is retained longer than evidence taken in through any other of the senses. Show the best, that customers will know when they are getting the best, and you will make it more difficult for poor stock to be palmed off on purchasers. Exhibitors at our conventions are doing more than just selfish work. These exhibitors are keeping up an education among florists themselves, of incalculable benefit. Brother exhibitors and florists, I ask of you to do all you can for this feature of the convention. If you see points that are weak, seek in a wise way to strengthen them. If we tear down let us have something better to put in its place. The discussion that will follow this, I hope will bring out many valuable thoughts and indicate lines of improvement.

I had thought to give you a few of the requirements of a successful exhibition, but I fear that would only be a "drug on the market" as you all know how to "get there," as well as I do. If I could tell you how to conjure impossible conditions so as to bring a harmonious combination, Oh, my, what shows we would have! No ill feelings, no debt to wipe out and everyone with first. There are great opportunities for the trade to develop through exhibitions and shows. It behooves us, as wide awake S. A. F.'s, to endeavor to take advanced steps in exhibitions. We must have national exhibitions in keeping with our national progress; they will be trade promoters, and we must watch and work with our government and the management of future great expositions, and see that our interests are second to none. I believe our Trade Exhibition is the most important feature of our meetings. See to it then, that it receives due consideration in the future. It is worthy of the best hall and management this organization can command.

There is another sort of a trade exhibition which it might be well to call to mind. The efforts individuals may and do make at home in their every day business. The chief end of a display is to create a desire, and offer an opportunity for comparison. No honest dealer can begin to convey, by a description in type, what he has to sell, as he can by placing the thing itself before the would-be purchaser. This being fully realized, the up-to-date florist, or dealer, is always ready and anxious to show his skill at every opportunity. This applies to the local florist of a small town, as to the leading city establishment, to our county fair, as to our grand expositions and trade displays. If you are a market florist, it stands you in hand to study your display, so as to make it catch the eye, and cash as well, as to study how to produce. Only the smartest are capable of running the retail end of a florist business, and at the same time conduct the growing successfully. I am sure increased business will come to many who will give these sales exhibits more attention. Get out of the ruts, be different, so a fellow will know just when he has come to Smith's stand by its style and make up. Give it an individuality in some way, so you will be known from the half dozen neighbors near by.

Trade requires you to show the newest and best you have. You must fulfill this requirement, or lose custom. Show your goods is a law of trade, as essential to us as to any other line. Business men fully realized this, hence the great combinations spending millions of dollars and resulting in our great expositions. Go into our cities and see the quantities of valuable goods placed attractively in large show windows, placed with all the skill and art that trained help and costly fittings can command, and you can form some idea of the value placed on trade displays in other lines of business. Our retail flower stores are not behind in this grand effort at display, for they, too, are abreast of the times in showing their beauties, with all the accessories of glass, gilt and electric lighting.

Trade displays, yes these are the very essence of trade displays. It is not possible for me to approximate the value of these displays to the business itself. I know a prominent florist who estimates the actual value of his window display at not less than fifty dollars per day. What its direct value to him is, I cannot say, but that this one window has been of great indirect value to the balance of the city's flower trade, I have but little doubt. Through blistering summer and frosty winter, that grand, beautiful live flower picture is feeding the hungry, who cannot possess, and drawing the dollars from the rich who see only to possess. In the language of the proprietor of this store, "they walk right in and buy." Truly I believe this display is richer than the eye can see, and he who makes it is a benefactor of his race, be he the individual taken as an illustration, or any one of the hundreds making the same efforts.

Florists should be strong supporters of every effort to beautify public grounds, for they bring to the public eye the uses and beauties of our goods, and in a measure are trade exhibits. A beautiful plant, flower or combination of both, seen for the first time at some park, or exposition, stamps itself on the memory, awakens a new interest and desire which at the first opportunity will be gratified, and some tradesman will have made a sale and be benefited.

Realizing the value of showing our goods, it behooves us as a society and as individuals to let no opportunity pass that we can utilize for the purpose of these displays. Many local clubs and individuals are and can do much to increase trade by making these displays. We can greatly increase the love for flowers by showing the people what to have, and how to have it, and when they have it at its best. I hope to see this trade feature extended, improved and worked up to the highest degree of effectiveness.

Trip to Hanscom Park.

On Wednesday afternoon the ladies who were in attendance at the convention were treated to a carriage ride about the city and to Hanscom Park, where refreshments were served. The Omaha ladies who acted as hostesses upon this occasion were Mesdames A. Donaghue, Sr., Swoboda, J. F. Wilcox, L. A. Kasper and S. B. Stewart.

The Florists' Hail Association.

At the annual meeting of this association, Wednesday afternoon, Messrs. Wm. Scott, of Buffalo, and John T. Temple, of Davenport, Ia, were elected directors. Amendments to the by-laws were adopted providing that, for each million square feet of glass insured, the officers shall receive annual salaries as follows: The secretary, $50; the treasurer, $20; and the president, $7.50. The reports of Sec'y J. G. Esler and Treasurer A. M. Herr were considered and accepted.

At the meeting of the directors Messrs. E. G. Hill, J. T. Temple, Wm. F. Dreer and J. C. Vaughan were present. The following were elected: President, J. C. Vaughan, Chicago; Vice-President, E. G. Hill, Richmond, Ind; Secretary, John G. Esler,

Saddle River, N. J.; Treasurer, Albert M. Herr, Lancaster, Pa. Messrs. Vaughan and Hill, who resigned as directors, were succeeded by E. Weinhoeber, Chicago, and H. M. Kellogg, Pleasant Hills, Mo.

The Bowling Tournament.

Six teams participated in the contest for the Evans Challenge Trophy. Buffalo made the highest score but, not being able to muster a full team, was admitted to the competion with outside players only upon the condition that she should not claim a win if successful. Wm. Scott made the highest individual score and won a gold medal, with an average of 179. The contest lasted eleven hours. St. Louis was awarded the trophy. Following is the complete score:

The Election.

Willis N. Rudd, president-elect of the Society of American Florists' is a young, energetic, progressive Chicagoan. He is enthusiastic, yet conservative, and is always to be found in the front rank of the army of workers in the cause of good floriculture. As president of the American Carnation Society he gained an enviable reputation for his wise and conscientious policies and under his guidance the S. A. F. will not fail of material advancement along the lines of its greatest usefulness.

In accordance with custom the vice-president was chosen among the members from the city selected for the next convention and the choice fell upon Philip Breitmeyer, of the firm of J. Breitmeyer & Sons, Detroit's largest growers. Mr. Breitmeyer is president of the Detroit Florists' Club. Secretary William J. Stewart, of Boston, and Treasurer H. B. Beatty, of Oil City, Pa., need no introduction to our readers.

Bulb Growing in America.

A paper not on the programme was upon "Bulb Growing in America," by Prof. W. F. Massey, of the North Carolina Experiment Station. It was particularly timely and was listened to with attention, as it contained much of practical value.

A Few Remarks on the Dahlia.

BY LAWRENCE K. PEACOCK, ATCO, N. J.

[Read before the Society of American Florists at the Omaha Convention.]

With the revived popularity of dahlias comes a renewed interest in anything pertaining to their development and culture. I regret recent ill health prevented my presence with a more exhaustive article but I will be pleased to give any further information in my power, or answer questions in any of the trade papers.

During the present year there was an increase of fully fifty per cent in the sale of dahlia plants and bulbs and during the past six years over fifty per cent or an average of nearly ten per cent for each year since 1892. In reference to the different classes I am compelled to say that the cactus type has been a source of great disappointment in many ways. First, they are not so free in blooming as the other classes; second, they will not keep so long after cutting; third, except in a few cases they have very short stems unless disbudded; fourth, they are the latest of all dahlias to bloom.

There are, of course, some exceptions. That is, some of the true cactus dahlias do not have all of the above failings. For instance, the cactus dahlia, Henry F. Michell, is an immense flower of perfect form and an early continuous bloomer, but, like other cactus varieties, will not stand up well after being cut.

Of their form, however, it can be said that their beautiful forms and exquisite blending of colors make them the most delicate and graceful of all dahlias.

Of the cactus dahlias, Delicata, Perle de la tete d'Or, Lady Penzance, Gloriosa and Countess of Pembroke, if it can be called a cactus, are the most valuable. Showy and fancy dahlias still seem to be the favorites, judging from the bulk of sales, but they are closely followed by the decorative class, or, as they are sometimes called, semi-cactus, decorative cactus, etc.

This is perhaps the most valuable type of dahlias for florists' use; they are strong, vigorous growers, free bloomers, full range of colors and have long stems. The most valuable of this class are Clifford W. Bruton, Wm. Agnew, Grand Duke of Alexis, Mrs. E. C. Monroe, Henry Patrick, Maid of Kent, Nymphæa and Black Prince.

Another fine variety is the weeping dahlia, Lemon Giant. It is of a pale yellow color, five to six inches in diameter, deep and full. They are borne on long drooping stems and from a distance resemble large fluffy balls.

The pompon dahlia seems to be holding its own in the race and with such beautiful varieties as Eleganta, Snowclad, Rosalia, Daybreak, Fairy Queen, Little Beatrice, Little Prince, Little Diavolo, and a score more of equal merit, it is not surprising. Little Beauty is the name of a new delicate pink variety to be introduced in 1898. The petals are perfectly quilled and it is a valuable acquisition.

In single dahlias great advance has been made with a corresponding increase in popularity. The greatest objection to Paragon, Nance, Cloth of Gold, and other old favorite single dahlias was their great height and lateness of bloom. We now have single dahlias of larger size and same length of stem on plants eighteen inches to two feet high.

Of these varieties St. George leads them all; color pure yellow; height two and one-half feet, size four to five inches in diameter; a strong sturdy grower, free, early and continuous bloomer. Ada, Edina, Irene, Luxury, Vernie, Little Dorothy, Corrine and others, including Novelty, the new fragrant dahlia, combine in making the new dwarf, large, early flowering, long stem, single dahlias one of the most valuable sections of the entire dahlia family.

I had not intended to say anything regarding our single stem branching system, but after the past heavy storm I must mention it even at my own expense. During April and May we had rain almost every day for six weeks which prevented early planting. This was followed by a severe drought, broken only two weeks ago with thunder storms and very heavy winds. Now, as we were late and very busy, we concluded that our dahlias, thirty-one acres, would bloom earlier if not pinched back. This was a big item as we had a large number engaged as soon as ready. We were perhaps two weeks ahead by not pinching, but had taller plants by one-third and shorter stems by one-half.

On Thursday evening, August 4, we had an acre and a half of Clifford W. Bruton coming into full bloom standing about five feet high. During the night we had a heavy storm, with wind blowing a gale. On Friday morning, August 5, our block of Bruton dahlias were flat and it took six men a half day to stand them up.

A friend of mine, Mr. C. E. Varnum, had two rows of specimen blooms grown to the single stem branching system. Out of three hundred plants exposed to the gale one plant was blown over and two or three leaned a little; the balance were standing as erect as ever.

In conclusion I would like to call attention to the possibilities of the dahlia as a florists' cut flower, both for bouquets and for decorations. Varieties like Countess Pembroke, Nymphæa and Clifford W. Bruton, have size, color and length of stem, all that can be desired; also the possibilities of the dahlia as an exhibition flower. The exhibitions of the past two years, both in Philadelphia and Madison Square Garden, in New York, have demonstrated their value better than I can express.

I sincerely trust that at the next meeting of this society, the American Dahlia Society will be officially represented and I think it would be a good thing if it could work in conjunction with the Society of American Florists.

Trip to Council Bluffs.

Thursday afternoon was devoted to a trolley ride over the splendid inter-urban electric line to Council Bluffs and the

home of J. F. Wilcox. Special cars were provided and the party, numbering into the hundreds, left the Paxton hotel at 1:30. Mr. Wilcox served luncheon at his home and the return was made in season for the evening session after one of the most enjoyable outings which has fallen to the lot of the S. A. F.

Grafting Roses for Forcing Under Glass.

BY ROBERT CRAIG, OF PHILADELPHIA.

[*Read before the Society of American Florists at the Omaha Convention.*]

This is a subject which is exciting very great interest in the minds of many rose growers of America at the present time. The business of forcing roses for cut flowers has assumed vast proportions, the competition is so keen, and the supply frequently so large, that the markets are often glutted, so that only the very finest blooms command remunerative prices, except in the now very rare occasions when there is a scarcity in the market. Any method, therefore, which gives promise of better results is eagerly discussed, and the most progressive are ready to to adopt it as soon as it is shown to be of value.

Grafting of fruiting, flowering and ornamental plants is a very old art and has been practiced for thousands of years; but it is only recently (within the past ten years) that any extensive experiments have been carried on in houses used for forcing roses for cut flowers. In this country as early as 1887 the subject was discussed in the columns of the AMERICAN FLORIST by several prominent growers, some of whom were of the opinion that grafted roses gave better results than those on their own roots; and others just as prominent, maintained the contrary opinion. Now, after all these years, the fact that a few of our most successful growers, catering to the severely critical markets of New York, Boston and Philadelphia, have, for the past three years, been gradually and greatly increasing the quantity of certain varieties grown in this way, is, in itself, sufficient reason for inquiring into the subject. I will endeavor briefly to give you the results of my own experiments and observations, in the hope that the matter may be further discussed by the growers present at this meeting.

I think it may be safely said that certain varieties, in a great majority of instances, show decidedly better results when grafted than when grown on their own roots. This is most noticeable in three very important roses, Bride, Bridesmaid and Kaiserin Augusta Victoria. The advantages are in the increased vigor of growth, resulting in the production of better blooms, on longer stems, and a greater quantity of them. I have also seen Mme. Hoste and Souvenir de Wootton do remarkably well, also Mme. Caroline Testout and President Carnot when grown for summer bloom. I now have two houses of grafted Kaiserin, each 130 feet long by twenty-two feet wide, planted on benches, from 3-inch pots on April 20, and the plants have been paying well for the past two months. This is the best white rose for summer and therefore fills an important place. I must say I never saw young plants do so well as these have done and are now doing. The plants average three and one-half feet high and have been continually producing an abundance of good blooms. I have noticed this variety, grafted, doing particularly well in other places. I may say here that I last winter examined a house of Brides planted on benches, one-half of which were grafted and the other half on own roots. There was in this case very little difference in the growth of the two lots, both doing exceptionally well, the grower, a very prominent one, remarking that he could "see no advantage in grafted plants." In all the other lots I examined in different sections of the country, the grafted roses showed notable superiority. In the cases of Mme. de Watteville, Mme. Cusin, Mrs. Pierpont Morgan and Meteor no difference could be observed between those grafted and those on own roots. In the case of Perle and Sunset those grafted on Manetti were inferior to those on own roots; a good stock for these varieties and for others which do not thrive on Manetti may yet be found.

In 1880 Mr. Peter Ball, of Malden, Mass., had a house of Perle grafted on Yellow Banksia which did remarkably well. I am of the opinion that no advantage is to be gained by grafting American Beauty, as that variety usually makes wood fast enough on its own roots. It may, however, be worth a trial by those who cannot grow Beauty successfully on own roots. I have noticed experiments with roses grafted on Rosa Carolina, R. multiflora Japonica, La Grifferaie, Polyantha, Banksia, Rosa canina (used largely in Europe as a stock for teas), Carmine Pillar and Climbing Wootton. In the case of Bride, Bridesmaid, Kaiserin and Wootton, Manetti has proven decidedly the best; it is not affected by eel worms and is so vigorous that it will stand very rich feeding. As to other varieties a suitable stock may yet be found. The Cherokee rose might be a good one as it is extremely vigorous and an evergreen variety. The stocks may be readily grown here but it is much cheaper to obtain them from Europe; they should be ordered of as nearly uniform size as possible, and not exceeding five-sixteenths of an inch in diameter. When they arrive in the fall they should be heeled-in in a cool place but one where they will get no frost, which frequently injures them, until the time for putting them into 2½-inch pots arrives.

After the stocks have been potted and put in a temperature of 45° to 50° (it is better to start them in this low temperature until they are well rooted), they are ready to graft. After the sap has started in the stocks they should be kept from freezing, or failure will be the result. The best method is what is known as "splice grafting," *i. e.*, the stock should be severed by a long diagonal cut and the scion cut of corresponding shape to fit as nicely as possible. The important point is to form a direct contact between the layers of inner bark, as the pithy part in the center never unites. It is well to have the scion and the stock as nearly of a size as possible, and the union should be made as soon as possible after the scion is taken from the parent plant. The scion should not be kept for any length of time in water, the absorbtion of which prevents a good union being made. The wood used for grafting may be kept in a box with damp moss, or covered by damp paper; the scions may be tied with either string or raffia; the latter is preferable, as string is apt to cut into and injure the graft. The operation should be carefully done, and the more nearly perfect the union, the better for the future welfare of the plant.

The best time to graft roses is during January, February and March; after the latter month the sun gets strong and the top heat is likely to be too great. After the plants are grafted, they should be put in a tight case in the greenhouse, with strong bottom heat, which can be had by inclosing steam or hot water pipes under the case. For a case five feet wide, six 1¼-inch steam pipes, regulated with valves, will be ample. First whitewash the inside of the case thoroughly with lime and sulphur as a preventive of fungus; this should be repeated every time a crop is taken out. There should be put in the bottom of the case an inch of coarse cinders or other rough material as drainage; this should be covered by two inches of sand in which to plunge the pots and should be well soaked with water before the plants are put in, which will obviate the necessity of watering for several days. In placing the plants in the case it is well to leave an inch space between the outer row of plants and the side of the case, as fungus, the greatest obstacle to success, frequently starts on the woodwork. If fungus should appear, it may be washed off with clear cold water. After the plants are put in the case a steady temper of 80° to 85° should be maintained until the grafts have "taken," which will be in from two to three weeks. No air should be given for the first three or four days; after that, the sash may be raised an inch or so. As soon as the grafts have "taken" they may be removed from the case into a greenhouse of the temperature of 60°, and started up with light stakes to prevent the grafts from breaking off. It is well to shift them into 3-inch pots and establish them before planting on the benches.

Improvement in Varieties and Cultural Methods.

BY E. G. HILL, RICHMOND, IND.

[*Read before the Society of American Florists and Ornamental Horticulturists at the Omaha Convention.*]

The subject assigned me is one involving questions that lie at the root of all real progress in our profession.

The pessimist declares that there has been no real progress either in the production of new varieties or in the origination of better methods; that old things are the best things.

That there are numbers of florists, good men and fair growers, who hold this view, is unquestionably true. It is unfortunate that such an opinion should hold sway over any considerable number of gardeners and plantsmen, but one has only to look about with his eyes and listen with his ears to be convinced that such a condition of mind exists among a great many florists both east and west, and the position taken by them, and their utterances of such views, have a retarding and clogging influence upon our trade life, much as we dislike to acknowledge it.

The point of view may make a great difference with our conception of the relative progress or lack of progress of our craft.

The indifferent florist, the florist lacking in energy, the florist only partially interested in his work, these are the men who measure the efforts of their fellow craftsmen by their own short yardstick and defective scales.

Notwithstanding their assertions, we claim that there has been progress in the production of new varieties of plants and this can be proven by a reference to the revised lists. Take the carnation; note what advance has been made since American growers have taken hold of this winter flowering plant. Yet, palpable as has been the gain, there are still grumblers who claim that we have only added size and at the expense of quan-

tity, and the gain is only superficial—nothing that can be computed in dollars and cents.

This line of argument can be refuted by the reply that second and third quality flowers remain unsold, while flowers of large size and perfect form find a ready market.

It is true that the production of new varieties and the improved culture of plants must go hand in hand, and we make the claim that they have very nearly kept pace together, although there are certain lines of plants of which this cannot yet be asserted; but take the rose; this is the flower upon the production and sale of which the florist is, perhaps, most dependent. It can hardly be asserted that the origination of new varieties has kept pace with the improved culture as exemplified by a large number of our best growers both east and west. We can count on the fingers of one hand the varieties of forcing roses which are necessary for the trade of the present day: Bridesmaid, Bride, American Beauty, Meteor and Kaiserin Augusta Victoria, Perle, Sunset, Mme. Cusin, La France, Testout, Gontier, Mrs. Pierpont Morgan, have all declined in favor, as did Bon Silene, Isabella Sprunt, Safrano, and Cornelia Cook in a former decade; we have not been favored with new sorts that can take the place of those named above. Kaiserin is the only late addition, and this is not as productive as could be desired in mid-winter under our present conditions of rose forcing.

Dame Fashion desires and insists upon having novelty and change in bonnet and gown, in house and furniture, in nearly everything which ministers to our sense of pleasure.

A city lady speaking recently of her floral decorations said: "I am very tired of seeing on my table Scott carnations and Bridesmaid roses, flowers which have become so common that they are flaunted in one's face at every street corner and ferry crossing; yet often there is little else to choose in this color."

One reason for the complaint of the lack of profit in rose growing heard at many of the large rose growing centers, comes from the fact that there is not variety enough in our roses, hence the increased sale of other kinds of cut flowers, and the greatly increased demand for fine plants. If the proportion of cut roses is to keep up to the volume sold in previous years, it is manifestly evident that new varieties amenable to our present growing conditions must be forthcoming; roses for blooming in pots, for home and garden adornment, have been produced and have proven very popular as will be noted further in this paper.

The efforts of Mr. Jackson Dawson and of Mr. W. A. Manda are to be commended, for, if they continue in their line of improvements, we shall soon possess garden and climbing roses which shall combine fine decorative qualities with hardiness to withstand our severe winters and trying spring weather.

To revert again to carnations; from the best attainable data, it is fair to conclude that the art of producing fine flowers has kept pace, in measure at least, with the finer varieties of carnations introduced in recent years. The time of lifting the plants from the field, benching, preparation of the soil, feeding, staking, watering, and other details carefully looked after, have to a great extent revolutionized the methods in vogue but a few years ago. If one wishes to be convinced that superior methods of culture prevail, and that the new varieties are finer in size and form, with better stems, and more variety in color, he has only to attend the annual exhibition of the American Carnation Society. This society is doing a commendable work in diffusing knowledge tending toward better culture and especially is its work valuable for the wise, fair, and cautious methods of bestowing certificates and honorable mention upon new varieties. It is only fair to say that the greatest advance has been made in carnations as compared with other flowers, and that the equality between the improved methods of culture, and the improvement in varieties is very marked.

In chrysanthemums, the production of new varieties and the steady improvement in the form and finish of the cut blooms has been marked each year, despite the high grade flowers produced and exhibited the year of the World's Fair. Among the newer sorts are varieties more suitable for handling as cut flowers, varieties that bloom earlier, choicer sorts for very late growth, together with new colors.

The general production of finer flowers both for sale and exhibition as well as for decorative purposes, has been very marked.

In orchids, great strides have been made in cultural methods; the old coddling process has given way to a common-sense and economical system of management. This genus of plants will grow in favor with the public as people become better acquainted with its charming colors, unique forms, and simple requirements. Prediction is made that they will become an important factor in the cut flower market as soon as the new methods of culture are more generally known and practiced.

To decorative and bedding plants there are constant additions of valuable varieties; some of the notable things are to be found among the new Brazilian caladiums; these are marvels of color combination.

Among newer crotons are many brilliant and valuable additions to standard sorts; crotons grown under the new conditions prevailing, with artificial heat in summer, and suitable soil, are destined to perform an important part in all decorative plant work.

Asparagus Sprengerii will prove one of the most valuable plants of recent introduction when once its diversified usefulness becomes known.

Everything indicates a marked improvement in all cultural methods as applied to the development of plants for the production of cut flowers; progress is the watchword; every wide-awake florist questions, "Is there a better way than the method I am using?"

Plants and their requirements are being studied and understood as never before, and we in America are standing on the threshold of a new era in their growth and production. Let us be fully alive to the possibilities that lie before us in Flora's grand domain, and like our gallant tars and brave soldiers, not be content to simply keep abreast of the general line, but, like the true American, show that there is a "man behind the gun" who can and who does hit the mark.

In our endeavors to create new forms in plant life let us bear in mind the wants of the American people. We want new roses that shall supplement our too meagre list of really suitable varieties for cut flower production. Let us seek a tea rose of the shape, form, and productiveness of Bridesmaid with the color of a Jacqueminot; we also need a yellow Mermet. If the rose growers would seek as persistently as have the carnation men to produce choice seedlings, these two forms and tints would soon fill our eyes with gladness and our hearts with joy. Let no American rose grower use the names Admiral Dewey or Commodore Schley until he has a scarlet Bridesmaid or a yellow Mermet with which to honor and adorn the names of these two gallant Americans!

Noteworthy evidence of recent advancement.

(1) The houses of grafted roses at the Waban Conservatories, at Natick; results showed stouter canes than under similar conditions on own roots, and thirty per cent more of A1 blooms.

(2) A house of Crimson Rambler rose at Robt. Craig & Son's, Philadelphia, flowered in pots for Easter sales; those grown in pots for two years gave even better results than those potted from the field the preceding autumn.

(3) Dracæna Sanderiana, as grown by W. K. Harris, Philadelphia, is one of the choice things for the center of jardinieres and fern pans.

(4) A bunch of Mrs. Lawson carnations as grown by Mr. Peter Fisher, of Ellis, Mass., observed early in February, showed extraordinary good cultural results; the bed shaded by cheese cloth in the middle of the day.

(5) Bench of Hector carnations as done by Dailledouze Bros., Flatbush, N. Y.; under their method of culture very prolific in bloom with good large flowers.

(6) Growth and bloom of American Beauty and other roses as grown on common drain tile benches by Bassett & Washburn. The perfect drainage produced by the tile is certainly an important factor in cultural conditions.

(7) The exhibit of carnations by W. N. Rudd at the Chicago meeting of the American Carnation Society, varieties Mayor Pingree, Mrs. McBurney, Jubilee and Flora Hill.

(9) The bench of bedded dracænas at Mr. Dressel's, Weehawken, N. J., indicates the possibility of growing this class of plants at a minimum of cost and in a most expeditious manner.

(9) The geraniums grown in pots by C. W. Johnson, gardener for W. N. Rudd, and exhibited in bloom at the Chicago chrysanthemum exhibition in November last. Their development showed what could be done with geraniums at our autumn exhibits.

(10) Chrysanthemum blooms grown by Alex. Montgomery, Waban Conservatories, and shown at the autumn exhibit of the Pennsylvania Horticultural Society. These were especially noteworthy on account of their fine finish and perfect contour.

(11) Bougainvillea glabra, as propagated, grown and flowered by Theo. F. Beckert, Glenfield, Pa.; especially praiseworthy.

I might go on indefinitely and cite instances of improved cultural methods as shown at various places, but the above will give some slight indication of the onward movement in plant development. Surely "the world do move," even in the floricultural world.

Recent noteworthy introductions:

Asparagus Sprengerii. This will prove of very wide value; it makes grand sprays for the table, for general use, and especially for flat bouquets, as it supports the flowers combined with it; its greatest beauty is seen as a pot or vase plant, standing, as it does, our hot suns. The two fine baskets hanging on the porch of

Mr. O. P. Bassett, Hinsdale, Ill., show its adaptability to this particular use.

Rose, Crimson Rambler. For the adornment of porch, trellis or pillar this is one of the most valuable introductions of recent years. As a plant for growing in pots for Easter, and for spring sales, this beautiful rose fills every requirement.

The other varieties, called ramblers of different colors, will not bear comparison with the first variety.

Begonia Gloire de Lorraine. This beautiful plant has all the charm and exquisite beauty of the flowering begonia. Extraordinarily fine when well done; requires special treatment during a portion of the year on account of its herbaceous habit and character.

Carnation, Mrs. Geo. M. Bradt. This variety, on account of its great size and freedom of bloom is one of the most striking of all Mr. Dorner's seedlings. This is unquestionably one of the desirable new things.

Carnation, Evelina. This promises to be an ideal white variety. The magnificent vases of flowers shown at various places the past season give promise of great value; it will have an extensive trial.

Chrysanthemum, Autumn Glory. This is one of the most charming of all pink chrysanthemums, having all the attributes of a splendid flower; its fine growth, but more especially its unique and beautiful color, places it in the front rank.

Rose, Lawrence Allen. An English hybrid; one of the last productions among the seedlings of the late Mr. Henry Bennett. This for pots, or forcing under glass, is one of the most charming roses sent out. A light satin-pink, of exquisite coloring, will prove excellent for Easter pot sales.

Geranium, Dryden. This is a novelty of the Mirande or Corona type. The flowers approach in size the larger of the single zonales. Coloring very intense. Has stood our hot summers with impunity. Will be extensively grown when better known, for its value both as a bedder and for pot culture.

Rose, H. P., Bladud. A very near approach to the long looked for white H. P. This is also one of the late Mr. Bennett's seedlings and is destined to be extensively grown when its good qualities are known. Seems to be more free in production of flowers than most hybrids.

Two showy crotons, Reidi and Baueri, both high in color and fine companions.

Deutzia Lemoinei. A fine addition to our forcing varieties of shrubs.

Cannas, acalyphas, geraniums, begonias, all show fine varieties of recent introduction. A candid review of the whole matter shows, however, that much of the credit belongs to the plantsmen across the water for these fine novelties in general lines, and the fact also stands out plain and distinct that we are much better off, relatively, in regard to new plants, than we were even two or three years ago. May the wheels of progress move on. Let us all be wide-awake, ready to take advantage of the evolution of the new condition of things, as we see it coming our way.

At the Exposition.

Friday was spent at the Trans-Mississippi Exposition and fervent were the words in which the visitors expressed their appreciation of the wonderful creation, the beautiful white city on the plains. Without exception the eastern representatives found it to far exceed their anticipations. The Nebraska building was headquarters and here lunch was served and felicitous speeches made. The Horticultural building was a center of attraction and so pleasing did most of the florists find the exposition that they will remain for other days of sight seeing.

The Man of Mars.

Henry Eichholz, of Waynesboro, Pa., is one of those fortunate men who know a good thing when they see it. Mr. Eichholz, whose portrait appears herewith, grasped his opportunity when he chanced upon the new dwarf geranium, Mars. The sale of this candidate for public favor surprised the man who gave it its introduction, for last year he sold 16,480 plants, one concern using as many as 6,750. Mr. Eichholz now has 5,000 plants in the field for stock and it is a sight to behold

HENRY EICHHOLZ.

them in bloom. Plants two years old are but ten inches high and have forty or even more flower stems at a time. Catalogue houses assure Mr. Eichholz that his geranium will be a leader in 1899 and call it the most useful introduction of recent years. Efforts are now being made to produce other colors of this new race of dwarfs for carpet bedding.

Although Mr. Eichholz has won his greatest fame on this new geranium he is a carnation grower of no mean ability. He devotes a large amount of glass to this flower and at present is making Daybreak his specialty. He is trying Evelina, Mrs. James Dean, White Cloud, Argyle, Mrs. Frances Joost and Empress and is growing Triumph, Armazindy, Flora Hill, Mrs. Bradt, Mayor Pingree, Lizzie McGowan and Portia in limited numbers. He has given Scott a three years' trial without getting it to bloom satisfactorily and will discard the variety. Admiral Dewey has again been honored as the namesake of a new carnation, a variegated pink sport of Armazindy, which Mr. Eichholz thinks will be heard from in due season.

CHESTER, PA.—Thomas F. Delahunt, at Twenty-first and Edgmont avenue, will erect an addition to his plant and make numerous improvements this fall.

An Unsolved Watering Problem.

Not long ago when a group of gardeners and florists were chatting together, the question of taking the chill off water in the winter before using it upon plants was discussed. The consensus of opinion was to the effect that it seems natural that water with the "chill off" was more congenial to plants growing in a temperature of not less than 56° at night, yet everyone present acknowledged that no comparative tests had ever been made to their knowledge, in order to prove the matter, one way or the other. One grower in relating his experience made the statement that he had only used water one season that had undergone the process of having the chill taken off, and during that whole season he had more red spider on the plants in his houses than he had ever had before or since in one season in an experience extending over some twenty-five years. He admitted, upon cross-questioning, that he would not like to blame the warmer water for the flourishing condition of the red spider, but rather that the men who had the manipulating of the hose were most at fault; yet he adhered to the idea that possibly growers paid more attention to the sentiment of the matter of warm water than to its practicability.

The temperature of water is deceptive. In my immediate locality wells are of varying depth, because some are dug wells while others are drilled, and every quencher of his thirst in summer time generally makes remarks as to the temperature of the water he is drinking. One of the oldest inhabitants, when imbibing at a drilled well last summer, stated that it was good water, but was not as cold as that from his own—a dug well. One investigator present at that time desiring to find out as far as possible how nearly our ancient friend was from being correct, secured a thermometer and in testing the water of the drilled well whence the water being drank was obtained, found that it registered just 56°. He tried several wells carefully in the neighborhood during the same day, both drilled and dug, with the same thermometer, and he found them all 56° without variation. My contention is that when water can be delivered to the plants not colder than 56° there is no necessity of going to the expense of making it warmer, as no injury can possibly result from administering water to plants that is no colder than the temperature, or at most a few degrees less, than that to which the plants are subjected at night.

There are various methods of securing water supplies. No plants were ever grown better than were those of former generations, when the water used was caught from the roof and stored in cisterns inside the greenhouse where the water contained therein is almost certain to be about the same temperature as the atmosphere of the greenhouse in which the cistern is located. The success attained by our forefathers was attributed, however, more to the rain-water used rather than the temperature thereof. In modern greenhouse establishments, be they commercial or amateur, the water supply has to be more systematically provided for; sometimes it is a windmill and a tank with ample capacity; at others some power more readily controlled is brought into service than the wind, such as steam, hot air, or electricity; but the best of all, when obtainable, is that furnished by a corporation or a municipality, if not too high in price. In most of the above methods, it is true, the temper-

THE OLD GUARD.

ature of the water is not readily controlled unless by a system of warming accomplished according to same primitive mode, or by the more up-to-date processes of the present day, which are in successful operation in different parts of the country.

The question is, At what temperature does water do injury to plants growing under gla s? Peter Henderson said in effect in his "Practical Floriculture," if my memory serves me correctly, that no evil resulted from the use of cold water upon plants growing in greenhouses, claiming that it is not necessary to warm it before use in sprinkling the leaves of the plants or watering them at the roots and stating that in a very short time it will attain the same temperature as the greenhouse in which it is used. If experiments have been made along these lines, and positive knowledge is in the possession of some good soul, I am sure there are numerous florists and gardeners, both old and young, who would receive the results with gratitude through the columns of your popular floricultural paper. E. L.

The Old Guard.

Every craftsman who ever went to Boston knows the Old Guard. They are beloved of their fellows for their generous hospitality and respected by all for their honorable business record. They know how to have a good time, and a holiday with the Old Guard is an experience one might well envy. Our illustration shows them as the guests of two of their number, Messrs. P. and E. J. Welch, at Old Orchard, Maine. They are not all Bostonians, for among the number are representatives of Providence, R. I.; Nashua, N. H.; and Portland Me. May they all live to enjoy many well-earned holidays.

Chrysanthemums.

Preparations should now be made for giving the plants in the benches liquid manure, and this we consider one of the most important operations connected with chrysanthemum culture. The main point is to have the plants and soil in proper condition at the time of applying the manure. We have found that when the plants are growing vigorously, and showing that greyish tint of the young foliage which is peculiar to healthy stock, they are in the right condition to receive stimulants if they are judiciously applied; that is, not to have the liquid too strong to start with, but to use it mild at first, increasing the strength gradually. At every stage the plants must be watched carefully in order to avoid carrying the application of manures too far. One can very soon tell when a plant has been given all the feeding it will bear, from an examination of the foliage. If it is at all brittle the supply of food must be reduced, not all at once but by easy stages.

Most varieties will need but little stimulant before the buds are set, except early propagated stock, which we feed lightly about three weeks before they set the bud, ceasing the application at the time the bud is forming, as the plant is then practically at a standstill. At this time, and till the bud can be seen plainly above the top leaves, we aim to keep the beds a little on the dry order. Of course there are varieties which have to be treated differently. For example, it is not to be expected that small foliaged sorts like Ivory, Golden Wedding, E. Dailledouze and others of that order, will require the same quantity of stimulant as vigorous growers, like Mayflower, Sunstone and Mrs. Jerome Jones. Again, most of the red varieties should receive but little liquid manure after they have formed the bud or they will be sure to burn on the petals.

It is impossible to prescribe any rule that will be applicable in every instance, as the strength and quantity of the manure must be determined by the soil conditions, and this knowledge is only acquired by long and careful observation.

There is one point in applying stimulants on which all chrysanthemum growers agree, and that is doing it in as little time and as cleanly as possible.

We use fifty-gallon barrels to hold the preparation and do not stick to one kind of manure but change it at every application, using about a bushel to a barrel of water, allowing it to stand a few days before using. We prepare several barrels of a mixture consisting of an ordinary bucket of bone meal and the same amount of soot to a barrel of water and let it stand from three weeks to a month before applying. We have found this an excellent aid to fine texture, both in foliage and bloom, and use it twice during the season. At the time the plants are able to assimilate the strongest stimulant we use a 3-inch pot of nitrate of soda with every barrel of the compound. This is applied through a Kinney pump, which dilutes the strength one half, so if cans were used we would figure accordingly.

C. W. JOHNSON.

Pittsfield, Ill.

George Hansen has exchanged eight of the twenty-four city lots which he owned in Springfield, Ill., for an establishment of two greenhouses here to which he is adding a third house. He lost 300 lights of glass by hail on the morning of August 15. Mr. Hansen has leased his Woodside greenhouse and his remaining sixteen lots in Springfield to Donnel & Wainscott.

Chicago.

A QUIET WEEK.—STOCK IN SOMEWHAT RESTRICTED SUPPLY.—MANY VISITORS IN TOWN.—CLEVELAND MEN HEAR BULLET'S WHISTLE.—OFF TO OMAHA.—NOTES AND COMMENTS.

This has been a quiet week in the wholesale markets. The supply of good stock has been somewhat restricted, but the demand has not been heavy enough to cause any material advance in prices. Really first-class Beauties are not obtainable, although several growers are sending in better blooms than the average of the summer flowers. The cut from new plants continues to improve in quality and increase in quantity, while prices continue fair. Of the summer roses the supply of good blooms has been none too great. The cut of carnations have not been of exceptional quality in the past two weeks, but the last seven days has seen better than those of the first half of the fortnight. Sweet peas are about over. Asters and other flowers are of reasonable quality and numerically equal to any emergency.

The city was full of visiting tradesmen on Saturday and Monday. The New York delegation, traveling in a private car, reached here early Monday morning, as did the Cleveland contingent. In the New York party were C. Weeber and wife, A. T. De La Mare and wife and Alex. Wallace, of the metropolis; W. E. Arnold and C. McGlynn, of Brooklyn: John G. Esler, Saddle River, N. J., W. H. Elliott, wife and son, Brighton, Mass.; Wm. Nilson, Woodlawn, N. Y.; E. Lenly, W. Hoboken, N. J.; Wm. Miller, Lynn, Mass.; C. Warburton, Fall River, Mass.; John Coombs and wife, Hartford, Conn.; L. B. Brague and wife, Hinsdale, Mass.

The contingent which Adam Graham brought to town had an uncomfortable experience while coming in on a Northwestern suburban train during the afternoon. Mr. Graham, H. A. Hart and S. N. Pentecost, of Cleveland, J. L. Dillon, Bloomsburg, Pa., E. H. Cushman, Euclid, O., and Robert George, Painsville, O., were seated near a car window through which a bullet crashed in such close proximity to their heads that had it been six inches either way one of the party must have been hit.

Many small parties and dozens of scattered members centered here for the trip west. It was unfortunate that the crowd was split into three parties, making the journey by as many different routes, but this was due more to rivalry in railroad circles than to anything accomplished or attempted by the various delegations. The parties going via the Burlington and Northwestern lines reached Omaha on time Tuesday morning, but the delegation on the C. M. & St. P. railway, the largest of the three, was delayed in Illinois for three hours by washouts caused by one of the heaviest storms in years. Those who traveled on this line were: A. Schmitt, H. A. Balsley, J. C. Vaughan, Robert George, Adam Graham, H. A. Hart, S. N. Pentescost, C. B. Whitnall, M. Barker, R. Vincent, Jr., and Mrs. Vincent, A. Klokner, Herman Hunkel, G. H. Rackham, J. V. Merrion, W. F. Kasting, Geo. Darby, Walter Kreitling, Carl Cropp, John Reardon, W. F. Palinsky, W. N. Rudd, J. B. Deamud and Mrs. Deamud, H. D. Rohrer and son, Nick Zweifel, Fred J. King, C. H. Cushman, E. H. Giesy, J. E. Yeats, J. A. Kramer, W. B. Perry, W. T. Symonds, N. J. Rupp, E. M. Wood, J. S. Wilson and Miss Minnie C. Binder, representing J. M. Gasser, Cleveland, O.

Philadelphia.

SMALL CROWD SENT TO OMAHA.—THE BOWLERS ARE IN IT.—BUSINESS CONTINUES QUIET.—THE TRIP TO DREER'S AT RIVERTON.—HUNDREDS PARTICIPATED IN THE PLEASURES OF THE DAY.—A MAMMOTH ESTABLISHMENT AND SUPERIOR STOCK.

It was a small but loyal band that left the City of Brotherly Love last Sunday afternoon for the Omaha convention. Had there been a shoot on the programme probably as many more would have joined the party, as the gunners are of blooded stock. A bowling team was finally gathered and formed a part of the delegation. Such another doleful meeting as was held by the bowling club last Thursday week we hope it will not be our lot to attend. One bowler after another announced that he could not go. Finally President Westcott stood alone, but he was determined, and if the cup shall grace our shelves again, to him will be given the credit first, and then the boys who helped will also come in for their share. They are sure of a royal welcome, trophy or no trophy, as we know they will do their best.

Business is about as usual for the season. Beauties are becoming more plentiful, but the quality is lacking. In their first state they seem so small and take such a short time to develop into full blown flowers that they are not very satisfactory. Kaiserins are fine, but only do for mortuaries. Some very choice asters are to be seen. The stock from inside is now coming along nicely and seems to be quite an improvement over that of last season. Fifty cents to $1.50 per hundred is the price. Hydrangea paniculata, with its abundance of snowy heads, helps out the display nicely and is doubly useful when a large white flower order is received.

The visit to Dreer's, at Riverton, last Tuesday afternoon was most thoroughly enjoyed by all present, and this means by about 1600 people who are, with but few exceptions, identified with the business in one branch or another in or about this city. It much resembled a last day convention crowd of the S. A. F. Everything was in the best of order and there was not a bad bench of stock or an idle corner anywhere about the place. The plants in all departments were the picture of health. The long tables in the packing shed were filled with orders selected to go away, but the stock is so vast that there seemed no holes in the houses where they could have come from.

Mr. Tricker's water lily ponds were surrounded by admirers all day long, the Victoria regia and V. Trickerii being especially attractive. There were many other choice and rare varieties that bore close inspection and called forth words of praise. The near future will certainly find a water lily pond on every well furnished lawn. After a stroll about the grounds and houses a collation was enjoyed on the lawn adjoining the mansion, where, when the interest was greatest, a photographer gathered them all in. An orchestra furnished good music, which was so entrancing that in some the Scottish blood was aroused and a highland fling and sword dance was the result. It was late in the afternoon when the boats were again boarded for the return to the city and all aboard expressed their great pleasure in having been able to be present.

The oldest visitor was John Dick, who, accompanied by his daughter, seemed to greatly admire the immense collection of plants and flowers. The original houses, built some twenty-five years ago, are now being torn down. They were 10x100 with walls thirteen inches thick and are being replaced by structures 22x100 with an improved dove-tailed gutter that has only to be thoroughly white leaded to be waterproof.

George M. Moss, wholesale florist, is the sign that will appear at 30 South Seventeenth street on September 1. Mr. Moss reports having secured a number of consignors, growers of good stock, and will stand ready at that time to execute all orders, entrusted to him, with the best stock the season affords.

Robert Curry and wife, of Columbus, Ohio, have been spending a few days in this city.

Charles Fox and Charles, Jr., are summering at Wildwood, N. J. What fish stories they will have to tell on their return! K.

Boston.

THE GARDEN COMMITTEE OF THE MASSACHUSETTS HORTICULTURAL SOCIETY PAYS A VISIT TO THE GARDENS OF MR. G. M. WHITIN, AT WHITINSVILLE, AND SEES MANY THINGS OF INTEREST.

The visit of the garden committee and others active in the affairs of the Massachusetts Horticultural Society to the grounds of Mr. G. M. Whitin, at Whitinsville, on August 10, was an occasion of rare enjoyment to lovers of ornamental horticulture. George McWilliam, who has had charge of this place for the past fourteen years, is well known to the craft for his remarkable skill in the production of fine specimens of plants of difficult culture, and a foretaste of what the visitors might expect to see has been frequently given in the exhibition halls of the Massachusetts Horticultural Society.

Mr. McWilliam met the delegation, numbering about twenty, at the station, and the drive through this, the most prosperous manufacturing town in the commonwealth, where five generations of Lasells and Whitins have operated the mills and factories and strikes and discontent are unknown, was thoroughly enjoyed. After admiring the fine old trees and other external adornments of the estate the visitors were escorted through the greenhouses, where were seen ferns of rare beauty, alocasias, caladiums and stove plants in infinite variety and perfection of growth, and beautiful dipladenias in all shades of pink and rose hung in luxuriance from the roof. The collection of orchids was found to be very extensive, and one house of calanthes in shallow pans showed amazing luxuriance that gave promise of an unprecedented floral display at Christmas time. Among other things Dipladenia Boliviensis well bloomed in small pots were particularly admired. The grape houses excited the old experts as nothing else could, and the long arches of luscious pendant bunches whetted appetites that later on were fully appeased with a liberal supply of the tempting fruit. An appetizing lunch was served in the reception room of the bowling alley after which the boys had to have a try at the alleys. A little odontoglossum house 6x35 heated by a kerosene stove and a coil of one and one-fourth inch pipe and a mushroom house seventy-five feet long with 290 feet of pipe heated by an electric current run through a little boiler with a capacity of about two quarts of water were among the interesting things seen here, and many predictions were made that the time would soon come when for small conservatories, and possibly large ones, electric heating would be universally adopted.

THE AMERICAN FLORIST

Subscription $1.00 a Year. To Europe, $2.00.
Subscriptions accepted only from those in the trade.

Advertisements, 10 Cents a Line, Agate $1.00 per inch. Cash with Order.

The Advertising Department of the AMERICAN FLORIST is for Florists, Seedsmen, and dealers in wares pertaining to those lines ONLY.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Wednesday to secure insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

WILLIE TIFFANY, of the Rosary, New York, who went to Cuba with Roosevelt's Rough Riders, won a lieutenancy at Santiago and has come home ill.

AT the Paris exposition of 1900 ample space will be allotted to horticulture. There are to be eighteen groups comprising 120 classes in the entire exhibition.

IN New York notes of last week the types made us say "Carnations in the field are lacking," instead of "Carnations in the field are looking well," as was intended and as is true.

ENGLISH horticulturists contend that carnation plants raised from layers are better for winter flowering than those propagated by cuttings, as is the universal practice in America.

IN Japan cut chrysanthemum blooms are kept fresh for many days by charring the end of the stem with a splint of lighted wood and then frequently changing the water in which the flower stands.

THE AMERICAN FLORIST'S Convention Special, issued at Omaha on the first and second days of the annual meeting, contained the name of every member present, where obtainable. Copies will be mailed free upon application as long as the supply suffices.

THE peppermint growers of Michigan are this year securing hardly half the usual product of oil. In some cases the yield is only ten or twelve pounds to the acre and the only hope of the growers is that the shortage will result in a rise in price.

JOHN BEIMFORD, of Wilton Junction, Iowa, writes to suggest that bisulphide of carbon be tried as a remedy for the disease brought upon Harrisii lily bulbs by mites. He is of the opinion that this preparation should be effective, and believes that it could be applied cheaply and without injury to the bulbs. About a year ago Mr. A. F. Woods, of the Department of Agriculture, advised the use of hydrocyanic acid gas, but so far no information has come to hand in demonstration of its utility for the purpose specified.

Paint for Heating Pipes.

ED. AM. FLORIST:—Would you please let me know through your paper what kind of paint I can use to put on the pipes in my greenhouse so as not to injure the plants? P. L.

About the best for the purpose is composed of linseed oil and lamp-black, enough of the latter being used to give a fair body to the paint. This gives a dull rough surface which will radiate more heat than asphaltum and other glossy paints, which are sometimes used.

L. R. TAFT.

The Peach Twig Borer.

This insect is described in a recent farmer's bulletin of the Department of Agriculture. It is said to be a serious menace to peach growing from its habit of killing the young tips of the branches and thus checking the growth. It is spreading to all parts of the country. The kerosene emulsion spray, however, effectually controls it.

The Dutch Horticulturists.

At the July meeting of the Dutch Horticultural and Botanical Society, held in Amsterdam, the floral committee made the following awards: First-class certificates to C. Kwint, for Begonia tuberosa fl. pl. cristata; E. H. Krelage & Son, for Begonia tuberosa fl. pl., Orange ball, Begonia tuberosa fl. pl., Souvenir de Pierre Notting, Calochortus Gunnisoni and Petunia Sneeuwbal; C. G. Van Dijk, for Schubertia grandiflora. Certificates of merit to E. H. Krelage & Son, for Ageratum Blue Perfection and Helenium Bigelowi; Botanical certificates to E. H. Krelage & Son, for Calochortus obispoensis and Lilium elegans Alice Wilson.

Greenhouse Building.

New Bedford, Conn.—John Joseph, one commercial house.

Chattanooga, Tenn.—Conservatory at East Lake Park.

Faribault, Minn.—Clarine Bros., additional house for winter forcing.

Woodmere, Mich. — Chas. Warncke, thoroughly modern greenhouse.

Pittsfield, Ill.—Geo. Hansen, one greenhouse.

Beaver Falls, Pa.—Louis Sutter, one commercial house 16x30.

DeKalb, Ill.—Jacob Haish, one house 22x45.

Fairbury, Ill.—Kring Bros., one carnation house.

Erie, Pa.—Schluraff Floral Co., one commercial house.

The Price of Glass.

Frank Hayes, of the H. M. Hooker Company, states that, in accordance with the usual custom, no window glass has been made in America since June 30, and that it is doubtful if the factories start up before October 15. The unusual demand for glass this season has resulted in a shortage and the supply of greenhouse sizes is nearly exhausted. The price has steadily advanced until fifty feet of 16x24 now cost more than $4, even if purchased in car load lots. Last week 34,000 boxes of so-called French glass were imported from Belgium, and this is the only thing which has prevented quotations soaring to unprecedented altitudes. But now comes the report that a strike for higher wages is imminent among Belgian glass makers, and the situation affords no ray of hope for a reduction this fall in the cost of greenhouse roofing.

Catalogues and Cut Flower Price Lists Received.

J. C. Schmidt, Erfurt, Germany, florists' supplies; Herb & Wulle, Naples, Italy, bulbs; Henry F. Michell, Philadelphia, Pa., bulbs and seeds; Kromer & Thieme, Rio de Janeiro, orchids; Wm. F. Kasting, Buffalo, N. Y., cut flowers; Holton & Hunkel Co., Milwaukee, Wis., cut flowers; Cincinnati Cut Flower Co., Cincinnati, O., cut flowers; Charles D. Ball, Philadelphia, Pa., palms; H. F. Littlefield, Worcester, Mass., wire; G. C. Watson, Philadelphia, Pa., mushrooms; The Walker Fertilizer Co., Clifton Springs, N. Y., fertilizers; Jos. Dixon Crucible Co., Jersey City, N. J., paint; Giblin & Co., Utica, N. Y., boilers; P. J. Berckman Company, Augusta, Ga., nursery stock; C. H. Joosten, New York, N. Y., bulbs; Friedr. C. Pomrencke, Altona-Hamburg, Germany, bulbs; John Peed & Sons, West Norwood, London, S. E., England, bulbs.

Fertilizer Cartridges.

In the AMERICAN FLORIST of June 18 I notice a somewhat fanciful description of M. Truffant's appliance and some no less fanciful comments on the importance of this novel method of applying plant food as to the ultimate result. It is quite amusing to see how readily certain people exert their criticism upon things which they have never seen and which they know nothing about. Such appears to be the case with the writer of the article alluded to, who makes use of the letter "X" as a signature.

I would tell "X" that the cartridges are entirely surrounded by the metallic envelope, and that the dissolution of the fertilizer they contain takes place through the folds of that envelope. Then the fertilizer is in an immediately soluble form, but to prevent a too rapid dissolution, which would be pernicious, the cartridges are submitted to a very considerable compression so that the waterings dissolve the fertilizer little by little according to the requirements of the plant treated.

These cartridges are more especially intended for amateurs' use, and I must say that this method is eminently practical and safe. It does away with any danger of burning the roots by too strong a dose and with any, to amateurs generally, troublesome preparation of fertilizing solutions. Florists may use instead the compressed blocks, without metallic envelope, which have their weight regulated to so many gallons of water and which dissolve in a few minutes.

This much for the cartridges, but as to the value of the fertilzer they contain, I wish "X" had experimented before passing his inconsiderate judgment. He "smiles audibly" at M. Truffant's long list of formulas. It would have proven much in his favor if he had kept that audible smile to himself, and I might retort that I laughed aloud and right heartily at his opinion. From what "X" writes I must take it for granted that he is one of those men who think that one formula will do equally well for any class of plants, for a palm as for a carrot for instance. Fifty years back "X" might have found no one to contradict him, but those days have happily gone by. Horticulture has largely taken advantage of the discoveries of modern science, and those men who are not awake to progress will soon know what it costs to stick to old empiric methods.

One general formula for each and every class of plants is just such nonsense as one specific for each and every malady of the human kind. And precisely therein lies the remarkable value of M. Truffant's work. He has analyzed hundreds of different kinds of plants and composed for each a fertilizer which is exactly suited to its needs and given in such a form as is best adapted to its special requirements. This is the only scientifically true manner of proceeding; all the rest is nothing but empiricism. If "X" could only see the results obtained by the aid of M. Truffant's fertilizers, he would no doubt cease immediately his "audible smile" and

think about who was the dude at the hickory pole in this case. Should the matter evince further interest on the part of the readers of the AMERICAN FLORIST I am quite ready to give more particulars on that, for every plant grower, most important subject. Before closing this I would only say that the zonal pelargoniums so highly spoken of by the Paris correspondent of the AMERICAN FLORIST were all cultivated with the aid of M. Truffant's special pelargonium fertilizer and the two exhibitors alluded to are quite enraptured with the results, as are also the numerous brethren who are experimenting this year in most European countries. H. FATZER.

Quessy, Aisne, France.

Lancaster, Pa.

Trade the last few weeks has been very quiet, yet some improvement over former years is noticed and the coming season is expected to run far ahead of last year.

Outdoor flowers are very scarce, owing to the long continued drought, which was broken last week by two days' rain, coming in time to make good field-grown stock. Carnations are scarce, with little demand. Roses appear to be the prevailing flower, retailing from 50 cents to $1 per dozen, the majority going at the former price. Sweet peas are poor, with but little call. Asters are coming in and selling at 25 cents to 35 cents per dozen.

Harry Schroyer, a son of Geo. Schroyer, the pioneer florist of Lancaster, and Mrs. Schroyer have gone on an extended trip to the west and Mr. and Mrs. Albert M. Herr and Henry Rohrer and son left last week expecting to wind up at the convention.

Mr. Herr, the carnation specialist, has given his houses a complete renovating and has remodeled a range of narrow houses running north and south, the paths being changed from the center of the houses to directly underneath the girders, thereby gaining valuable planting surface. He will plant extensively of the newer sorts, some 2500 each of Gold Nugget, Mrs. Bradt and Alba Superba, and 1000 each of Argyle, Mrs. Frances Joost, Wellesley and Genesee, and from 100 to 500 each of John Young, White Cloud, Jack Frost, New York, Red Jacket and Evelina. The leading varieties will be housed in quantity, especially Flora Hill, Jubilee, Triumph and Armazindy. He has on trial for introduction to the eastern trade 6,000 California novelties, some twelve varieties, that will be on exhibition at the meeting of the American Carnation Society in Philadelphia next February.

George Schroyer, who grows miscelianeous stock for his down-town store, has an especially fine lot of asters ranging from those in bloom to very small seedlings which will come on in timely succession. He has one house of chrysanthemums which look promising. After the chrysanthemums are out he devotes the house to azaleas, which are imported direct. Beauty, Mermet, Maid, La France and Meteor roses are grown on solid beds and on benches, the former preferred. He has one house of Mermets planted eight years ago that exceed either of the bench beds. Carnations are also extensively grown in solid beds, as well as both California and Marie Louise violets.

Lemon Landis, of the firm of Landis & Co., has built a range of fourteen houses, each 14x50 feet, to be devoted exclusively to carnations, principally Scott, Triumph, Flora Hill, McGowan, Thos. Cartledge and Jubilee, all planted on solid beds. The plant is heated by steam (low pressure), 1-inch pipe being used, with two flows and four returns to each house. The firm devotes five houses to roses, Brides, Maids and Perles all being planted on bench beds, which they are now drying off to carry over another season, this being tried last season with success. A house of California violets, planted from pots early in July, looks promising.

John Stewart, successor to Edwin Conroy, on the Stemman property, has given the greenhouses a thorough overhauling and has torn out the solid beds and substituted benches. He claims the solid bed system to be a thing of the past. He has one house each of Bride, Bridesmaid and Kaiserin roses for summer blooming, grafted stock, on trial. They show some improvement over stock on their own roots, having better stems and larger flowers. He housed his carnations in June from pots and a nice lot of chrysanthemums are to be seen here.

Henry Rohrer, who has built some 40,000 feet of glass in the last three years, the houses running north and south, even span, is making carnations a specialty. He housed his plants in June and claims that stock grown inside all summer requires less staking than when grown outside and that the results in general are better. Solid beds predominate and the plant is heated by hot water. The varieties grown in quantity are Jubilee, Flora Hill and Thomas Cartledge, with a general collection of the novelties. Mr. Rohrer uses one part jadoo to two parts soil in potting his carnations. The stock in general deserves credit and the whole plant is kept in splendid order at all times.

Colin Ogston, who has the reputation of being an expert grower, has charge of B. F. Barr's establishment. In roses he has planted one house each of Brides, Maids, Meteors and Beauties. Heretofore everything has been grown here on solid beds, which are being torn out, and bench beds substituted, the benches being placed eight inches from the sides upon which the heating pipes are placed. Two houses of chrysanthemums of all the leading varieties, with many novelties, look well. When the chrysanthemums are out the houses will be planted with sweet peas and violets from 4-inch pots. Mr. Barr will plant 35,000 carnations, principally Triumph, Jubilee, Scott, Flora Hill, McGowan and Thos. Cartledge. A complete assortment of miscellaneous stock is grown in pots, including about 1000 cyclamen, which deserve special mention. They are grown in frames on the north side of a house, the largest being shifted into 7-inch pots. A 100 horse-power boiler is being put in and the steam heating apparatus altered considerably. The houses in general are being remodeled and completely renovated.

B. F. B.

FORT COLLINS, NEB.—Jacob H. Corven, assistant botanist and horticulturist at the State Agricultural College, has resigned to take a post graduate course at Cornell University and has been succeeded by Carl Hall Potter.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

Every paid subscriber to the AMERICAN FLORIST for the year 1898 is entitled to a five-line want adv. free to be used at any time during the year.

SITUATION WANTED—By married man. German, grower of roses, carnations, 'mums and general stock. References. Address
F S, care American Florist, Chicago.

SITUATION WANTED—By young man for genera greenhouse work; 7 years' experience; sober and reliable. References. Address
LAWRENCE, 2638 Garfield Ave., Lincoln, Neb.

SITUATION WANTED—As foreman by first-class Beauty grower; competent to take full charge of commercial place. Married. Good references.
G H, North Wales, Pa.

SITUATION WANTED—By single man, for general greenhouse work; six years' experience in large establishment; 23 years old; sober, reliable. Address
FLORIST, 1456 W. Madison St., Chicago.

SITUATION WANTED—As foreman in large cut flower growing establishment by an A1 grower; 25 years' experience; best reference. Only reliable parties need apply. Address
ROSEGROWER, care American Florist.

SITUATION WANTED—By practical rose grower—up-to-date; would like to have charge where fancy roses are in demand. To reliable parties, the greatest satisfaction assured. For further information address
AMERICAN BEAUTY, care American Florist.

THE SEED TRADE.

AMERICAN SEED TRADE ASSOCIATION.

EVERETT B. CLARK, Pres.; JOS. A. BOLGIANO, 1st Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

MELONS in Douglas county, Neb., were hardly ripe enough for the use of the members at the convention.

HOERMANN & CLEARY, proprietors of the J. A. Foote seed store, Terre Haute, Ind., have purchased the stock of F. J. Feidler.

L. C. BOBBINK, American representative of the Horticultural Company, Boskoop, and Rudolph Van Til & Co., Hillegom, Holland, returned August 15 from his European trip.

ADAMS, MASS.—T. D. Brown made a contract on August 13, for the erection of a greenhouse in this city. He has been doing quite a business in seeds and bulbs for the past three years.

AMONG those interested in the seed trade attending the Omaha convention of the Society of American Florists were W. F. Dreer, L. L. May, C. G. Weeber, C. Cropp, J. C. Robinson, Frank T. Emerson, S. D. Dysinger, Fred. H. Bateman and others.

Holland Bulb Prospects.

The Bulb and Seed Merchants' Society under the name of "Bloemistenvereeniging" at Haarlem, with the object of promoting the interests of the bulb trade, held an extraordinary meeting on July 18, 1898, in order to discuss the conditions of the bulb crop in consequence of the unfavorable weather. It was agreed, that each firm should inform his traders of the situation in the following words:

The hyacinth bulbs in general will not have their usual size and good bulbs of many varieties will be very scarce.

Tulip bulbs in general are of medium size.

American Seed Growing.

Apropos of Prof. Waugh's remarks in reference to want of uniformity among plants of new varieties I might mention my own experience the present season with a new pansy. The seed was supplied by one of the foremost seedsmen of the United States, with the object of securing a suitable name for the pansy from among those suggested by the growers of the variety. In the description it is said that "the coloring in this variety is a marvel of richness, velvety garnet, bright red and golden yellow indescribably blended." I secured twenty-seven plants from the package of seed and all of them are now in blossom, yet no two in the entire lot have flowers exactly alike. In most of them "velvety garnet, bright red and golden yellow are indescribably blended," but in one the two upper petals are a uniform light garnet, while the three lower are a very dark garnet splashed with yellow; in a second the two upper petals are yellow with pencilings of garnet and the three lower, garnet shading to a yellow margin, while in a third all the petals have a reddish ground-color with pencilings and shadings of black. Almost any one of the different forms is worthy of a place among pansies but the difficulty is that the type has not as yet been "fixed" and a grower sowing the seed from any of them, would have no certainty what color the flowers on the resulting plants would be. The originator should have continued several years longer to select seed from flowers which came nearest to his ideal and then there might be so little variation that it would be possible to suggest a suitable name. The only name that I could now propose which would be in the least appropriate would be "The Pied Piper," and even that would have to be put in the plural, "The Pied Pipers," in order to cover all the variations of coloring. F. C. SEARS.

Wolfville, Nova Scotia.

NEWS NOTES.

KIOWA, KAN.—Hon. O. P. T. Ewell has just completed a conservatory that eclipses everything in this section.

MIDDLETOWN, DEL.—J. B. Lippincott has sold his greenhouse to J. E. Steele, of Henderson, Md.

ROCKVILLE, IND.—D. A. Graham is rebuilding a portion of his establishment. He finds trade very good this year.

ELLSWORTH, ME.—A. C. Stofell and Henry Graves have formed a copartnership and leased the Dutton greenhouses.

AUGUSTA, GA.—The establishment of the late Julius L. Huss has been sold to J. F. Huss, of Lenox, Mass., a brother of the deceased, who will conduct it under the management of Henry Balk.

MUSCATINE, IOWA.—The greenhouses which have been run by Emil Kranz have been leased for a term of five years to August Smith, of New York, who will take possession on September 9.

VENTURA, CAL.—The extremely dry season has made trade very unprofitable this summer. All outside stock has suffered a great deal but what survives the drought in good shape will command an excellent price next winter.

ATLANTA, GA.—The greenhouses of the Brookwood Floral Co. were recently damaged by fire, which started in the packing shed, completely destroying it and scorching three rose houses, and a carnation and violet house, doing considerable damage to stock.

EVANSVILLE, IND.—Levi D. Lockyear, who has been a gardener and florist here for thirty-three years, died after a long illness. He was born in Aylesbury, Devonshire, England, July 12, 1837, and came to America in 1865. Mrs. Lockyear and six children survive him.

MONTGOMERY, ALA.—The Highland Park Greenhouses, G. E. Luffman, manager, have been sold to W. B. Paterson of the Rosemont Gardens. He will run both places as they are close together. Montgomery is growing rapidly, and business is keeping pace with the development of the city.

A Profitable Side Crop.
The tomato is one of the profitable side crops for the florist if properly handled. An important item in proper handling is to start right by getting proper seed. Experience has proven the "Lorillard" the best forcing variety so far; but much of the seed now on the market is not carefully selected as to type I have taken pains to find something free from this objection and have pleasure in offering
Lorillard Forcing Tomato...
Specially saved for my trade by the originator, Mr. Jno. Gardner. Pkts., 25c, 50c and $1.00 free by mail. Bulk price on application.
Sutton's Best of All Forcing Tomato
Has done remarkably well with those who tried it the past season. I do not know how it is for outside, but it's a dandy for forcing; large, round, deep scarlet very prolific. Pkt. 10c. mailed free. (No bulk of this to offer at present). Give this new sort a trial. Stamps accepted for small amounts.

When writing please mention American Florist.

Our Good Book...

THE American Florist Company's Directory of the trade lists both alphabetically and by states and towns every one of the 13,500 persons or firms in North America engaged in the Florist, Seed or Nursery business. It states in which particular branch of the business each one is engaged, a feature of great value to those who issue catalogues, as by its guidance mailing to those not interested in your goods may be avoided and many times the cost of the book will be saved in postage and printing, to say nothing of disappointment.

EXCURSION TO BOSTON.

The Nickel Plate Road will sell excursion tickets from Chicago to Boston and return for trains of September 16, 17 and 18, at rate of $19 00 for the round trip. Tickets will be valid returning until September 30, inclusive. On account of heavy travel at this particular time, those desiring sleeping car accommodations should apply early to J. Y. Calahan, General Agent, 111 Adams St., Chicago. Telephone Main 3389. (58)

THE NURSERY TRADE.

AM. ASSOCIATION OF NURSERYMEN.
A. L. BROOKE, Pres.; E. ALBERTSON, Vice-Pres.; GEORGE C. SEAGER, Rochester, N. Y., Sec'y.

SEDALIA, Mo.—Philip Pfeiffer, of Pfeiffer Bros., the well known nurserymen, is quite dangerously ill.

DR. HERMAN SCHROEDER started his nursery at Bloomington, Ill., in 1852 and has been in business there ever since.

IT is stated that less than one-half the blackberry crop was gathered this year. Those engaged in the business believe that for three years no blackberry plants should be put out in the west for market purposes.

GEO. W. CAMPBELL, of Delaware, O., who died July 15, in his eighty-second year, is the man who years ago sent out the Delaware grape. President Hayes appointed him United States Commissioner to the Paris exposition of 1878.

JOSEPH M. NEIL, a nurseryman of La Porte, Ind., is the first to take advantage of the new bankruptcy law. He has filed a petition in the United States court asking to be declared a bankrupt. His schedule places his liabilities at $1800 and his assets at $700.

NELSON G. TREFRY, of Toledo, formerly chief gardener at nurseries in the Fresno valley of California, affirms that the blue gum tree of Australia, Eucalyptus globulus, is a natural disinfectant and a sure preventive of yellow fever. It will thrive in any damp situation.

THE American Forestry Association will meet at Omaha September 9 and 10. Among the well-known persons who will present papers are: Hon. J. Sterling Morton, Dr. Geo. L. Miller, Hon. R. W. Furnas, E. F. Stephens, C. A. Keffer, C. L. Watrous, F. S. Phœnix, Henry Michelsen, S. M. Emery, Geo. Van Houten, C. S. Harrison, Prof. Charles E. Bessey, B. E. Fernow, Prof. Lawrence Bruner and George E. Kesser.

The Seventeen Year Locust.

Bulletin No. 14 of the Department of Agriculture treats very fully of the insect commonly known by the above name. It is not a locust but a cicada and its proper name is the periodical cicada. It seems, however, that the popular supposition as to its appearing every seventeen years is founded on fact and that this long period elapses between the laying of the egg and the appearance of the perfect adult, the insect living in the ground during its immature stages. It is only the adult which is seriously injurious and even the damage which it causes is not nearly so great as is commonly supposed. In some locations it may seriously injure young trees and nursery stock, but no material harm is done to florists even where the insects are very numerous and but little harm to large fruit or ornamental trees. A number of remedies are given none of which are entirely to be relied on or can be applied on a large scale. The English sparrow is said to feed on this cicada greedily and has practically exterminated it in many localities, aided by numerous fungi, insects and animals.

Carnation Culture.

Many growers have by this time stopped topping their carnations; others are thinking of so doing in order that they may have early blooms. This, like everything connected with carnation culture, is largely a matter of soil, season and treatment. Growers who have in the past been successful in lifting their carnation plants with buds in all stages of development need not hesitate to do so again, but I have yet to see the first batch of carnations so handled that did not show the effects of their treatment almost the whole season through.

The first crop of flowers from such plants can be called anything but first quality and it will be along toward the holidays before any of the flowers will be really good. In fact, it is against all reason to expect plants to give good results, no matter how carefully they are handled. In the first place, some of the working roots are sure to be broken off in taking them up and planting them, and their mass of top is more than the roots can properly supply with nourishment. The result is that the older leaves around the bottom of the plant will die off. This leaves you either a sorry looking lot of plants or a tremendous amount of work in trimming them up. Most growers prefer doing the trimming to having their plants look bad all through the winter, and yet this trimming is a detriment to the plant unless done very carefully.

It is a far better plan, if you must have early flowers, to leave a portion of the plants without topping and allow them to bloom in the field, and top the others in the proper manner. These flowers in the field will be much better than those from plants in the houses at the same date, and these field-blooming plants will, in an ordinary season, continue to produce flowers until quite late in the fall, at least late enough to give the inside plants a chance.

Carnations for replanting should not be allowed to have any buds that are at all well developed, but should be full of shoots that are ready to throw up blooms; the more of these the better, as there can be a little judicious topping done in the houses if you find they are coming on too fast for the demand.

Some very late blooming varieties will not bear quite so close topping as other sorts, but almost all varieties are better planted in without any buds.

It is time to begin housing as soon as the plants are large enough for it. By large enough is meant plants that have from ten to fifty shoots; the nearer the latter figure the better, of course, but some varieties, like Jubilee, Gold Nugget and others of the same class, will not have more than ten shoots unless the season has been especially favorable.

C. C. Watson, Juniper & Walnut Sts., Phila, Pa.

ROSE HILL NURSERIES

Welcome!

We extend to **ALL** a cordial invitation to visit our Nurseries at New Rochelle, N. Y., either on your way to or from the Convention, **and at all times.** We may be able to furnish you just what you want. Our stock of

Palms, Ferns, Pandanus, Ficus,
Dracænas, Araucarias, &c.

has never been as fine as the present, and we believe it would be worth your while to see our stock and compare it with others before purchasing. Drop us a postal card, or telephone, and our carriage will meet you.

NOTICE! We shall not publish a Fall Catalogue or Price List. We would suggest and also advise, that any one in this line of business should **see the STOCK** before purchasing and compare same. Plants cannot be sold by yard or height. Height or size of pot never makes the plant. Catalogues and Price Lists we consider as the best method by which to keep your name before the public, but when stocking up for Fall and Winter trade, the best way is to see the stock, either by a **visit** or **sample.** Our stock is the finest today in America, and to sell by catalogue description would not be doing **JUSTICE** to the same, as it is cool grown, not drawn, and in fine shape, compact and bushy and well colored and will stand well wherever placed. We extend this invitation so you may be able to judge for yourselves.

New York to New Rochelle, 35 Minutes. **TIME TABLE** New Rochelle Depot to Nurseries 10 Minutes.

New York, New Haven & Hartford Railroad Trains leave from 42d Street for New Rochelle, N. Y.—7:00, 8:00, 8:02, 9:02, 10:03, 11:03, 12:06, 1:06, 2:02, 3:06, 4:06, 5:03, 5:35.
Return to New York—8:38, 9:04, 9:45, 10:40, 11:40, 12:45, 2:13, 3:28, 4:25, 5:13, 6:35.
Or, if you prefer to take a sail up Long Island Sound to Glen Island and visit one of the grandest Summer resorts in America. Little Germany and Botanical Collection, our carriage will meet you at the wharf. Boats leave foot of Cortlandt Street, East 32d St., and Brooklyn.
Let us know which way you are coming and at what time.

Siebrecht & Son,

NEW ROCHELLE, N. Y.

Telephone 151 New Rochelle.

PEACE

and QUIET reign supreme when you place your orders with us. Our stock of Florists' Supplies is SECOND to NONE.

Wheat Sheaves...
(Famous and Unparalleled)

Sago or Cycas Leaves
(Prepared)

Immortelles, Artificial and Wax Flowers and Leaves, Doves, Baskets, Pot Covers, Pedestals, Etc.

Our New Fall Catalogue ready about September 15th, 1898. Write for quotations, orders by Telegraph, Telephone or Mail; executed promptly with as much care as if you selected the goods personally.

M. RICE & CO. Importers and Manufacturers. 25 N. 4TH ST. **Philadelphia**

Davenport, Ia.

John Stapp, of Rock Island, Ill., has bought the Hitchcock greenhouses here and has moved them to his own establishment on the other side of the Mississippi, where he will use them for growing carnations.

Chas. Dannacher is cutting some very fine Beauties from new stock. F. G. Bahr has finished the work of replanting his rose houses and his place is in very creditable shape. There is no building in Davenport this year.

Mr. Grunewald, gardener at Humboldt Park, Chicago, was here at the recent Sangerfest and enjoyed himself. W. L. Morris, of Des Moines, was another recent visitor who was made welcome.

D.

BANGOR, ME.—J. C. Wright has established a pond lily industry and will grow the blooms for market.

GEO. WITTBOLD,

Grower and Importer of **TROPICAL PLANTS**

OFFICE AND SALESROOM, *1708 NORTH HALSTED STREET,* CHICAGO.

Largest Stock of Tropical Plants in the West.

Our place has been enlarged from year to year until now we have the largest establishment in the west where Palms, Ferns, etc. are grown exclusively.

Our shipping facilities are unsurpassed, as all the large Express companies make two calls at our place each day, and we also have easy access to all railroad lines running into Chicago.

We endeavor to fill all orders to the satisfaction of our customers, as we hope thereby to gain their future trade.

Satisfactory references or cash must accompany all orders from parties with whom we are not acquainted. We hope to be favored with your trial order.

Helpful Reminders.

If you have occasion to move any young trees, vines or shrubbery and want to make sure that they will go through the winter in good condition, now is the time to dig them up. I refer to localities where weather is warm and rain scarce. This is rather radical advice, but it is given after careful observation and experiences which have been so satisfactory as to warrant it. Such work must be done carefully and a plant that has grown rank, in deep, rich soil, continually moist, had better not be moved now, but one which has grown in ordinary soil and has depended on our rains for moisture produces closer and more stunted growth and is deficient in its supply of nutriment. Just at this stage it makes but little difference whether this deficiency is caused by lack of moisture to dissolve and supply food or by a lack of roots to carry on the process, so provided you can give the plants the proper care, the disturbing of the roots is not necessarily detrimental. First prepare the places; dig out large holes and provide good loam for filling; mix in some old manure; take up your plant; fork around and loosen the roots without cutting or breaking them more than is necessary; when you get within eighteen inches of the stem you can frequently lift the roots out in a ball by sliding it onto a board. Gather up all the roots and don't allow them to become either dry or wet enough to be muddy. When you have moved it to its new position, before planting, soak the ball of roots thoroughly and put in a quantity of water so that the ground will be wet, deep and wide. Then set the plant, lay out the loose roots in a natural position and fill in with soil well pulverized so as to work in between the roots. Have both roots and stem the same depth from the surface as originally grown; do not wet the surface, but cover it with hay fastened so that the wind will not blow it away; if the ball taken was not sufficient to hold the plant firm, put in a stake; maintain a moisture below, but do not keep the soil so constantly wet as to exclude air. You will find within fourteen days that new growth will be started; the care must not cease, however, as the plant is apt to grow longer into the fall and not ripen quite so early as otherwise.

It is also well to put in cuttings now of honeysuckles, matrimony vines, etc. They strike root readily and can be kept packed tightly in pans in a cold house until spring, when they should be placed in separate pots for sale.

The golden rod is a pretty plant for Easter. Dig up clumps now and put in pots. It will make new roots. Keep in a cold house all winter and bring into warmth when you start hydrangeas.

About Early Firing.

Recently a writer plaintively describes his losses of roses and the damage to his plants by reason of mildew. He states that he uses the utmost care and doctors the plants "as soon as the mildew appears" but, although he has been advised to fire early, he can not do so on account of the expense. It takes a lot of coal to heat up the water, he says.

Every wholesale dealer can vouch for the fact that regularly, spring and fall, every year, cart loads of otherwise good and salable roses are dumped or sold for a song simply because they are so disfigured by mildew that no one will have them. There is no excuse for mildewed roses during the regular season and the appearance of mildew in a rose house is a sure sign of carelessness, incompetence or shortsighted penuriousness.

Doctor the plants as soon as the mildew shows, forsooth. Put a Yale lock on the barn after the thief has your best nag well into the next state. Doctor the plants before the mildew comes. Keep doctoring them from the day they are planted until they are thrown out. Keep the sulphur going all the time, a light dusting frequently when there is no fire and the pipes constantly painted during the firing season. Let us look for a minute at the "can't afford it" plan of putting off the firing. If a man has five rose houses, on this same principle, he can save much coal by not firing one of the houses at all and can save more by letting two houses freeze up. This can't afford it idea carried out to its logical conclusion would be analagous to the advertised coal consumption of brother Carmody's boilers—it can all be saved.

The better price to be had, often the getting of a price instead of having the cut dumped, will more than pay for the extra coal used in early firing, while the increased vigor and productiveness at the beginning of the dull and cloudy season in early winter, when every good bud is worth money, can hardly be overestimated.

The proper and profitable way to look at the matter is to ask the question, not "How late can I put off firing?" but "How early can I begin?" As early as possible in the fall put on a little heat at night, leaving the ventilators more or less open through the night, as may be needed, and sulphur the pipes. Every dollar so spent for coal will almost surely bring a larger profit than any other expenditure of the year. What is true of early firing in the fall is almost equally true of late firing in spring. X.

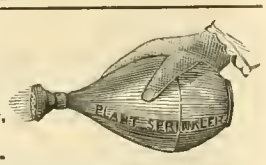
Shrubbery Notes.

We are not quite within the Arctic circle at Burlington, Vt., and we often think that this is one of the prettiest towns in the United States, but we all miss many of the pretty shrubs and trees which are hardy and thrifty in warmer climates. When we go as far south as New York, even, in the spring we see Forsythias and Lonicera fragrantissima, which, though they grow here under protest, have a strange look to us when we see strong, thrifty flowering specimens in Central Park or in Prospect Park or at Morningside Heights. And a little later the magnolias, rhododendrons and paulownias look still stranger to our eyes.



Hardiness against cold weather is an important quality in shrubs for our gardens, and we have a good opportunity to judge which species are thoroughly reliable. Among the spiræas the Van Houttei and S. aurea are by far the best. S. prunifolia and S. Thunbergii are planted in all good borders, for they are almost indispensable in spite of the fact that they both usually kill back severely here. The deutzias are commonly reliable here. This spring they were especially fine, both D. gracilis and D. scabra carrying the finest and heaviest loads of blossoms I ever saw. Lonicera Tartarica is hardy and is frequently planted. The large snowball, Viburnum Opulus, is frequently planted, and though it does not kill back much, it seems always to be unhealthy and much subject to attacks of aphides.

Probably the greatest favorite among all hardy shrubs in this place is Hydrangea paniculata grandiflora, of which one sees hundreds of plants in all sorts of situations, good, bad and indifferent. This beautiful plant is very frequently set singly on the open lawn, a position in which it almost never looks well. Single plants must be large and widely branched, full clear to the ground, to look well; but instead of that, it is the unfortunate practice to trim them up like standard currant or gooseberry bushes, leaving them naked and graceless. They are best when thickly planted in borders and when massed up in front with some small plant like Spiræa Thunbergii. Rosa rugosa seems to do well here, but has been planted only a little. The native dogwoods, of course, are hardy and fine, though not often enough used. Very few of the privets do well here, and I think there is not a good privet hedge in this vicinity.

F. A. WAUGH.

SAN FRANCISCO, CAL.—Chas. Pettijohn at midnight climbed a tree in front of his greenhouses and fired a pistol and rang a big gong. He was adjudged insane next day and was sent to Agnews Asylum. He is 61 years of age.

Carnations and Geraniums.

ED. AM. FLORIST:—On account of the continued dry weather my carnation plants in the field are very small. I generally bench them the first September. Would you advise me to let them stay outside two weeks longer, this season, as we may have rain by then which would improve their growth, or do you think they will grow more if I house them at the usual time? I have several double Gen. Grant geraniums which although healthy looking have not yet bloomed this season. Is it advisable to propagate from them? SUBSCRIBER.

Experience has taught us that to get the best results all carnation plants should be inside by September 1, or as soon after as possible. I therefore would not advise "Subscriber" to keep them out after that date as they are under control when inside and, if properly attended, will very soon go ahead. In fact, it is not the largest plant at this season of the year that will give the best results. For our own use we much prefer medium sized ones, that is, if they are not stunted with any disease. In regard to the General Grant geraniums not blooming, I cannot account for that, as it is generally one of the most free bloomers. I certainly should advise not propagating from such stock if it can be avoided.

C. W. JOHNSON.

Worcester, Mass.

The weather has continued very warm and humid and although very disagreeable to man and beast, it is great growing weather and everything outside and in is doing finely.

The condition of trade remains unchanged and we are receiving plenty of good flowers; carnations are practically out of the market, but asters make a good substitute.

H. F. A Lange has nearly completed the first house of this years' addition, which when completed will consist of six houses containing about 7,000 square feet of glass. A. H. L.

Greenhouse Piping.

ED. AM. FLORIST:—Please state the number of 2-inch pipes required for a small greenhouse 14x24 feet, 9 feet to ridge and 4½ feet sides, to maintain a temperature of 55° or 60° in cold weather, the house running north and south with north side sheltered. Would one two-inch flow overhead at the north end be sufficient, dropping into six rows continued all around the outside, with valve to regulate the use of the pipes according to the outside temperature? L.

If the mercury does not drop much below zero and there is no glass in the side walls of the house the temperature desired can be maintained with 150 square feet of radiation which will require about 240 linear feet of 2-inch pipes. If the pipe is to run around two sides and one end of the house, about four runs will be sufficient, if the boiler is of ample capacity. While a two-inch main would answer, better results can be secured if a larger size is put in.

L. R. TAFT.

Toronto, Ont.

The Toronto Gardeners' and Florists' Club is to give a chrysanthemum show in November and has distributed several hundred plants among school children as a means of arousing public interest in the affair. During August the society has been holding weekly meetings in various places, to which the children and their parents were invited to listen to talks on chrysanthemum culture by various members of the organization. There are to be several prizes for the young people who exhibit the best blooms.

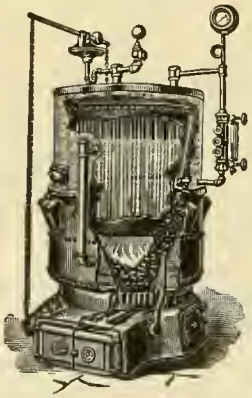
GENERAL OFFICE AND WORKS: LEOMINSTER, MASS.

Pittsburg.



THIS IS THE SEASON FOR SUMMER VACATIONS.—TRADE IS DULL.—NEFF STARTS HIS FOURTH STORE IN THE PLACE FORMERLY OCCUPIED BY BELLA BECKER.—HARVEY SHEAFF WILL HAVE CHARGE.

There is practically no change to report in the trade situation this week—everything very quiet.

Sam'l McClements, of Randolph & McClements, is sojourning at Atlantic City with his family. T. P. Langhans and family are at Somerset, Pa., for a short time. W. G. Duff, of Highland avenue, E. E., is also on a summer vacation.

Lincoln I. Neff has secured the unexpired lease on the store room recently occupied by Mrs. Bella F. Becker, at 6105 Penn avenue, E. E. He also bought the stock and fixtures, is now remodeling the interior, will rearrange the greenhouse in the rear of the store room and re-stock it completely. Harvey C. Sheaff, who has been with him at his Sixth street establishment, and formerly with the Murdocks and James Dell, will be manager of the new place. The location is a very central one and, in the hands of the present proprietor, this venture will certainly score a success. Mr. Neff has now four stores, one at Braddock, Pa., Oliver Best, manager; one at 4010 Butler street, Mrs. Neff in charge; one at 210 Sixth street, which he conducts himself, and the new one mentioned above. REGIA.

Our Trade Directory.

No wholesale dealer in plants, seeds, nursery stock, heating apparatus or florists' supplies can afford to do business without the American Florist Company's Trade Directory. This handy volume of 351 closely bound pages lists every dealer in the business and contains classifications and other information of great value. It is sent postpaid for $2.

THE OMAHA CONVENTION

Discussions and Reports.

The subject of trade exhibitions was one of the most interesting presented at the convention and the discussion which followed Mr. Cushman's paper developed a concurrence of opinion as to the desirability of trade displays in general and particularly around florists' establishments. It was thought that, while the annual trade exhibitions do not pay in the sense of realizing immediate pecuniary profit, they are of very great ultimate benefit in keeping the people who live at a distance from an exhibitor informed of what he is accomplishing in trade improvements.

Messrs. Hammond, Wintzer and Siebrecht spoke of the educational value of exhibitions in stimulating a taste for floriculture. The beautiful floral work displayed in the grounds surrounding the the railroad stations, particularly at Ypsilanti and Niles, Mich., were cited. D. B. Long suggested the holding of consultations between prominent exhibitors and the Executive Committee at annual meetings for the development of new ideas for exhibitions.

An animated discussion of Robert Craig's paper on grafted roses was continued at some length by E. G. Hill, Antoine Wintzer, H. A. Siebrecht, E. M. Wood, Robert George, Wm. Scott, Robt. F. Tesson, W. W. Coles and C. C. Sanders. All of the speakers seemed to concur in the opinion that Bride, Bridesmaid and Kaiserin roses grafted on Manetti, under certain circumstances, showed marked improvement over those on their own roots. Mr. Coles, in speaking of the rapidity with which roses may be propagated by grafting, cited an instance where he propagated in one season 1100 plants from a single plant of Mrs. John Laing. J. L. Dillon of Bloomsburg, Pa., related his experience and said that he had 2,500 plants grafted on Manetti which were planted on solid beds in June. He favors grafting Bride and Bridesmaid, but has found that Perle and Meteor do not do so well.

Mr. Craig, enlarging upon a statement by E. M. Wood, said that that gentleman's roses were grafted on Manetti and were also very skilfully cultivated afterwards, the result being the finest blooms yet raised in this country. A point developed by E. G. Hill was the fact that Manetti should be kept constantly growing, as under some conditions it showed a tendency to become more or less dormant in the fall and winter months. Mr. Wintzer detailed instances in his experience in grafting and also propagating by means of soft wood cuttings. The convention manifested a disposition to consider the subject at greater length at Detroit in 1899.

REPORT OF EXHIBITION JUDGES.

The following report was made by the exhibition judges on class D, greenhouse appliances, etc.:

The J. C. Moninger Co., of Chicago, makes an exhibit of cypress lumber for greenhouse construction. The fine quality of the material is especially commended.

John G. and A. Esler, Saddle River, N. J., make an exhibit of rubber hose that seems to be especially well made, of extra thickness. The rubber and inside lining is particularly noticed.

The Quaker City Machine Co., of Richmond, Ind., exhibit the Challenge Ventilating apparatus. The committee find that its ease of management and great durability are especially noticeable.

The committee finds that Yeats & Bacon, of Champaign, Ill., have on exhibition an alarm attachment designed to give notice to watchmen of a change of temperature.

AFTER DINNER ORATORY.

Following the repast at the home of J. F. Wilcox, at Council Bluffs, remarks appropriate to the occasion were made by Messrs. Wm. Scott, Robt. Craig, J. D. Carmody, H. J. Siebrecht and Adam Graham. Mr. Craig said:

It is not difficult for me to say a word on this occasion because my heart is full of thankfulness and I am glad of the opportunity of expressing that which I know every one feels. I am very glad that I came to Omaha. My only regret at this moment is that we have such a small delegation from the extreme east. This western country has been a revelation to me. The way the very corn grows out here is the way that things are done in the west. Everything is on a large scale and is done with a whole soul and a full heart.

It was my privilege to be somewhat identified with the World's Fair in Chicago, in 1893. I was there when the ground on which the buildings were to be located was a swamp. I helped to lay out the greenhouses there. A year later, upon coming back, I found the great White City—grown up, like a mushroom, almost in a night. I say to you that this could not happen in that way in the east. It was an expression of western force, and often since that time my thoughts have reverted to that wonderful exhibition of western enterprise and western spirit. You could stand there

on the bridge opposite the Administration building and behold from that point the materialized expression of more architectural magnificence than was to be seen anywhere else on earth. And all this was achieved in, you may say, a single year.

The people in the west are a great people. I wish our eastern people could come out here and see and study this marvellous country and get better acquainted with this noble people.

Ladies and gentlemen, my heart is full at this moment and I am unable to utter my thankfulness to those who have set aside all personal concerns in this unselfish way in order to provide for our welfare. These expressions of hospitality are as grateful to our hearts as is the falling dew to the flower of the field. I am glad that I came because I can carry back the story of all your kindness, your consideration and your hospitality.

PRESIDENT GUDE'S SILVER SERVICE.

At the session on Thursday evening President and Mrs. W. F. Gude were presented with a splendid silver set, including tea service, water pitcher, goblets, knives, forks, spoons and other things. The testimonial of esteem was entrusted to J. D. Carmody, the punster from Posey county, for presentation. Mr. Carmody, in his peroration, referred to the presiding officer as a goody-goody fellow and, as he took up each of the several articles, he accompanied them with observations of similar serious character. But the gentleman's oratory must be judged neither by his puns nor his "biler" ads. for, ceasing his jocularity, he closed with felicity unequaled in all the complimentary speech making of the convention.

President Gude responded in a few well chosen words, thanking the donors not so much for the beautiful gift as for the evidence of the fraternal spirit with which it was offered.

THE MATTER OF CREDITS.

When the convention rejected the recommendation of the Executive Committee to establish a Department of Credit Information Cornelius S. Loder offered to receive members of the S. A. F. into membership in the National Florists' Board of Trade, allowing them a reduction of twenty per cent on the usual fee. The proposition was not officially accepted but was ordered incorporated in the annual report.

BY THE WAY.

Scott, like the boys from St. Louis, has a winning way with him.

Courteous Hess the boys called him, and the title fitted all over.

One veteran said it was his first visit to church since he was wed.

The first greenhouse in Nebraska was discovered by Walter Kreitling.

Harry Balsley laments the loss of a new straw hat. He will get even next year.

Robert Craig's eloquence will be long remembered in the city by the Missouri.

That big, double headed Saint Paul train was called a fast freight, but don't forget that no ordinary train could have carried the same number of passengers. The limited express is very good in its own way.

St. Louis is no longer a suburb of Chicago.

Even in defeat John Westcott plays the graceful part he knows so well.

The distance was too much for some of the old-time exhibitors, but the display was creditable withal.

Posey County Carmody retains his office of cavalier and wit.

Kasting anticipated such a warm time that he left his buffaloes at home; he was not much disappointed.

J. F. Wilcox was unanimously voted the biggest man in Council Bluffs or elsewhere.

That front page of the AMERICAN FLORIST convention number pleased the western boys.

The handsome electric-lighted dining car of the St. Paul train was decorated with Meteor roses and ferns by Kreitling, Deamud and others.

John Reardon, Jas. Hartshorne and George Stollery of the Chicago party seemed to get as much real benefit out of the sessions as could be gathered.

J. A. Evans, of the Quaker City Machine Works made a profitable western business tour in connection with the convention trip.

The AMERICAN FLORIST supplement proved an opportune guide to the many Omaha hotels in which our members were more widely scattered than at any previous convention.

Prof. F. W. Taylor entertained some friends at dinner Wednesday evening at the Viaduct restaurant on the exposition grounds. The party included Mr. and Mrs. Elliott, Mrs. DeLaMare, Mrs. Bunde, the Misses Bunde, Miss Lempke and Messrs. Bateman and Vaughan. The guests were afterwards given a view of the illumination from the roof; this was followed by a walk down the Midway with the Professor as guide and a view of the magnificent fireworks completed a most delightful evening.

BEGONIA MARQUISE DE PERLATO.

Rex Begonias.

These begonias are propagated either from stem cuttings or leaves. When the latter are employed, those that are mature should be selected, removing the petiole (leaf stalk) and trimming away a portion of the margin at the base. Insert in sand, giving them an upright position to economize in space, and keep them well shaded until rooted. A cutting bed such as is used for roses will suit these begonias very well. I prefer to propagate early in spring, as the cuttings can then have the benefit of bottom heat with ample time to make nice plants for winter.

As soon as the cuttings are thoroughly rooted they should be potted, using a light, sandy soil which has been run through a fine sieve. They are then placed on the benches of a low house in which they can be kept close and shaded for a time. Air is given more freely when they have taken a firm hold, but the atmosphere of the house must still be kept moist. The plants must be kept growing, potting them on as that operation becomes necessary. The soil may be made gradually coarser with each potting until in the final shift an unsifted compost of loam, leaf mold, well rotted cow manure and sand is used, adding a sprinkling of lime

When the plants are thoroughly established and the pots well filled with roots, weak liquid manure may be given occasionally. In summer they need plentiful supplies of water at the roots, but a much smaller quantity will suffice in winter. Some growers recommend syringing the

BEGONIA REVOLUTION.

plants, but my experience does not sanction it. Sometimes it can not be avoided entirely, as for example, when they are used with palms and other decorative plants in the conservatory during the summer season. Even then I avoid wetting the leaves as far as possible, and keep the house shaded, with plenty of ventilation day and night. But the result will be different if the plants are regularly syringed and kept close at night; the leaves will then be damaged and numerous small holes will render them imperfect.

For decorative purposes I consider good specimens in pots of medium size the most desirable. The leaves of such plants hide the pots and they are certainly more attractive than older ones destitute of foliage at the base. The old plants, however, are useful for propagation. Begonias, I find, are subject to mematodes at times. The trouble is said to be due to the use of old soil in potting. Where old soil must be used it should first be given a winter's freezing in a dry, open shed from which it can be removed at any time and thawed out as required. The addition of a little lime also helps as a preventive.

Among the best varieties of this section is Revolution, which takes its name, apparently, from the peculiar form of the leaves, a rather interesting feature, especially to amateurs. Marquise de Perlato is of very dwarf habit, producing numerous side shoots which are useful when it is necessary to increase the stock, as cuttings make plants more quickly than leaves. Another excellent variety is Duchess de Brabant, the large leaves of which extend over the pot completely obscuring it from view.

Ithaca, N. Y. ROBERT SHORE.

Chrysanthemum Notes.

It is getting along now toward the time when we should be on the lookout for the buds that are to be retained, and they should be taken or selected before the side shoots have an opportunity of drawing upon their vitality by absorbing the greater part of the nourishment given to the plants. When the lateral buds and shoots are large enough to be rubbed out without damaging the center bud, they should be removed.

We are taking buds this week of some varieties, the plants being from early propagated stock, and in most cases the buds now in process of formation are second crowns. Care must be taken to see that the buds are perfect in form; if the center bud is not perfect it should be removed and one of the side shoots retained to furnish another.

The variety Midge is the first one to form the bud with us and we find this early bud the best one to take, the next not making nearly so fine a flower. We have no trouble with weak necks in this variety, the bloom hardly getting above the foliage. Geo. S. Kalb is also setting the best bud to take, but care must be used with this one as we find it has a tendency to come blind. Yellow Queen from early stock is also showing the bud, but with June struck stock it is best not to take the bud until about the 1st to 10th of September. We also take the buds of Mrs. Jerome Jones as they come along now, the early buds making the largest and fullest flower and come pure white, while the later ones come mostly pink. Like Midge, this variety gives no trouble with the neck.

We also notice buds forming on Mayflower, Modesto, Mrs. Caton, Henry Hurrell and Ivory. The following are best from the terminal buds: Maud Dean, Viviand-Morel, Mrs. Martin A. Ryerson, Mrs. J. J. Glessner and Defender.

At present writing we are having a spell of hot weather with very heavy dews at night, which, with the full ventilation given, cause a damp atmosphere inside. We therefore discontinue syringing late in the day so as to have the foliage dry at nightfall.

Specimen plants need to be staked out

BEGONIA DUTCHESS DE BRABANT.

now and they should have plenty of water with an occasional dose of liquid manure. If the roots show at all on the surface of the soil, they need a mulch of well rotted manure. Single-stemmed plants should be in their flowering pots by this time; and staked up as soon as large enough; they need a light place near the glass and when pot-bound a little liquid manure may be applied.

C. W. JOHNSON.

Obituary.

MORRIS A. HILL.

The death of Morris A. Hill, a brief mention of which has been made in the AMERICAN FLORIST, removes from our midst a man whose noble traits of character endeared him to all those who had the good fortune to know and to come in contact with him. Mr. Hill was born in Goshen, Conn., sixty-three years ago, and came to Ansonia in 1864, moving from Thomaston and entering the employ of the Slade Woolen Co. For a number of years he was thus engaged, and after the company went out of business he commenced growing a few flowers and plants, extending his operations from time to time until he had the largest and best equipped greenhouses in Ansonia. For fifteen years he had also been the superintendent of the Pine Grove cemetery, and the work done there in late years has been under his supervision. The landscape gardening and beautifying of the grounds proved him to be an artist of the first rank.

A wife and five children mourn his death. The children reside at home, there being four sons and one daughter. The business will be carried on as heretofore by his heirs.

HOMO.

Carnation Culture.

If you have not commenced planting it is high time you were doing so, as the sooner after August 15 the carnations can be housed the better, providing the plants are large enough to give good results.

If the plants are small and puny it will be better to wait and give them the advantage of the good growing weather through September; this is better than to have such small plants to start with. Those outside will make three times the growth they would inside, and while it may make your flowers come a bit later, you can easily have them in for the holidays if planted between October 1 and 15 and the difference in number will more than repay for their lateness in blooming.

With plants of proper size it is best, however, to get them in as early as possible so as to have them well started and growing nicely before the fire heat is put on the houses. They seem to get a better start than if the houses are heated before they have taken hold.

Planting should never be entrusted to any but the very best men on the place and should always be done under your own supervision, as proper planting is the keynote to success. The plants must be carefully taken up so as to preserve as many of the roots as possible. If the soil is dry they will be the better for dipping the roots into water before planting them, and even if it is not dry they should be sprinkled as soon as they are taken up so that they will not become wilted before planting.

The beds or benches should be in the best possible condition, the soil just moist enough to work nicely. Planting should be done with a trowel and care must be used not to get the plant set too deeply. As soon as a small section is planted it should be heavily watered and slightly shaded, following this up until the entire house is planted. The after treatment consists in syringing them occasionally so that they do not become wilted.

I use ordinary mixed stable manure, well rotted, and apply as much of it as the soil may need. This will vary considerably, but should be not over five or less than three inches deep. If possible staking should be done as soon as the plants are set; with us it is usually part of the planting; we set a row and then tie it up. This makes the best job, although it means some hustling to get 60,000 plants properly housed and staked.

ALBERT M. HERR.

MORRIS A. HILL.

Helpful Reminders.

There is no better time than now to give begonias attention. They are one of the most satisfactory of house plants, are not expensive, and, although they demand some care, it is not difficult to grow them. There are so many distinct sorts that a house of begonias would give a great variety of flowers and foliage the year round. There is no better stock for a medium sized establishment to "make a hit on," for while begonias will not put up with shiftless treatment they all "look glad" when the proper care is given them. The most essential item in their treatment is high feeding.

Whenever you find a beautiful cluster of begonias you will notice that the soil is light in texture and very rich. You will find that the young roots have not been allowed to wilt, that the plants have not been crowded, that each branch has developed in accordance with its own instincts and not been affected by some protest of its neighbor. You will also notice that those varieties which are the most beautiful in color and form of foliage are brittle and do not stand wind, and that the color formations are such that require light, but not direct sunlight. Those with the more glossy surface can endure the sun, and some that are only grown for flower effect and have narrow leaves thrive best in it. By carefully reading the character of each variety, which is always portrayed by its foliage, you will soon be able to place each in its proper situation so that several varieties will grow to advantage in the same house. A temperature of from 50° to 60° is satisfactory, but begonias, like all other plants that require moisture, will be damaged by having the temperature fall so that the moisture in the air will be condensed on the foliage.

One of the most satisfactory flowers for August cutting is the shrub, clethra, commonly called the sweet pepper bush; upright spikes of leaves in pairs, resembling veronica, creamy white, sweet scented; can be cut long and keeps well. The shrub will grow in shade or in any place where you can find room for it.

Flitting Reminiscences of Omaha.

"Prosit"!

"Gut Heil"!

"Ach! was fur eine Hitze"!

"Three cheers for Detroit"!

"Wie befinden Sie sich heute Morgen"?

The Clevelands play pedro like veterans.

The Purchase Department has another chance for its life.

The grafted rose had the best of the argument.

Omaha furnished the best meeting hall the Society ever had.

The corner table at the New Mercer belonged exclusively to N. J. Rupp, of Chicago.

"Donnerwetter! Vos ish dis? Schmaltzgesicht! Philadelphia licked by St. Louis"!

St. Louis to Buffalo—"You may look but you mustn't touch it. See?"

Who ever saw so many silver dollars? We were glad to spend them if only to get rid of them.

H. A. Hart, of Cleveland, was the happiest man in Omaha when he found that he could communicate with home by telephone.

Ten or more bowling teams are already in the field for 1899. A movement was started to procure a suitable trophy to be awarded the team making the highest aggregate score in three games at Detroit. All competing teams are invited to contribute $10 each. Several have subscribed already. John Westcott, of Philadelphia, will receive the cash.

Wm. Scott and another veteran have offered to bowl any other two S. A. F. members of equal combined age at Detroit next year, the losers to pay for a dinner, and we understand that John Westcott has accepted the challenge and selected his second. Thus waxes warm the rivalry between Buffalo and Philadelphia. We know the dinner will be a good one.

The excessively high temperature was attributed to Harry Balsley, of Detroit. He kept the telegraph wires hot for two days and nights.

Fair, very fair, were the members of the fair sex in attendance at Omaha.

Wonder how many times the mayor's golden keys were used?

John Westcott wants an entire day for the sports next year.

The neatest thing on record—Carmody's presentation speech.

"Nichts geht ueber die Gemuethlichkeit"

Philadelphia's commissary department was inexhaustible.

The Credit Department was "black listed."

Mayor Moore is all right.

"Wir gratuliren der Fest Behoerde."

"Auf Wiedersehen"!

"Hello, 55"!

"Prosit"!

Address THE AMERICAN FLORIST CO., Chicago.

It is said that the supply of some of the choice varieties of carnations will be short when housing time comes on.

PRESIDENT W. F. GUDE visited Denver and Colorado resorts after presiding over the Omaha convention. Mrs. Gude accompanied him.

J. D. EISELE, well known as the superintendent of Dreer's Riverton nurseries, is thoroughly enjoying his European trip with his family.

WE are in receipt of the Monmouth County Horticultural Society's list of premiums to be competed for at an exhibition scheduled for Wednesday, August 31 and Thursday, September 1 in the Casino, Rumson Road, Sea Bright, N. J. H. A. Kettel, Sea Bright, N. J., is secretary of the society.

THE discussions on rose culture, trade exhibitions and home grown bulbs at the recent convention clearly demonstrate the practical utility of the annual meetings of the S. A. F. The vein of earnestness which pervaded the entire proceedings was a happy omen for the society's future.

IN Buffalo's score at the convention bowling contest in the third game the 152 points credited to W. W. Coles, of Kokomo, Ind., should have been 174, making his total 437. Mr. Coles says that he takes much pride in this record as it is the best he ever made. It was one of the good scores of the tournament.

The Convention Photograph.

Those desiring copies of either of the group photographs taken on August 18 at the establishment of J. F. Wilcox, at Council Bluffs, Iowa, can obtain them at 75 cents each by addressing Frank Peterson, photographer, Council Bluffs.

President-Elect Rudd.

Willis N. Rudd, president-elect of the Society of American Florists, was born near Blue Island, Ill., March 30, 1860. His ancestors were New York farmers through many generations. Educated in the public schools of Blue Island, Ill., Scranton, Pa., and Watertown, N. Y., he was later employed in a stationery house in Chicago. In 1876 he obtained by competitive examination a four-year scholarship at Cornell University and entered the class of '80. He was out of college two terms in 1878, employed by the same stationery house. Just before graduation in 1880 he was taken suddenly ill and ordered home. Disabled for six months, all his money had disappeared when he recovered and took up work again. He taught school in Wisconsin until his health was fully restored, and returned to Chicago in 1881, remaining a short time with his old stationery employers. He next engaged with a machinery concern, occupying various positions for four years, when he bought an interest in the establishment and took charge. In a few months he sold out, however, and spent a year in the western department office of the Springfield Fire and Marine Insurance Company. In 1886 he took his present position as secretary, superintendent and director of the Mount Greenwood Cemetery Association. He was for many years postmaster, express and insurance agent at Mount Greenwood, Ill., and building the greenhouses there eleven years ago, he has been in the business commercially ever since. In this venture he has met with much success, but attributes most of it to the excellent abilities of his grower, C. W. Johnson.

Mr. Rudd was elected president of the Chicago Cut Flower Exchange when that institution was on its last legs, and he assisted at its obsequies. He has long been a member of the Chicago Florists' Club, and was elected its president but declined to serve. He has been a member of the Executive Committee of the S. A. F., was chairman of the Chicago Committee of the Chrysanthemum Society of America, resigning a year ago, and he is an ex-president of the American Carnation Society. In all departments of horticulture he takes a thorough interest and is well posted on everything that pertains to the business. When taxed with the rumor that he had once written a book, he blushed somewhat and said he thought that had been forgotten. This happened when he was young and as he has since reformed he hopes that a long life of rectitude may at some future day entitle him to forgiveness. In any case he was only responsible for half of the book.

New York.

SIGNS OF RETURNING PROSPERITY.—SATISFACTION REGARDING CONVENTION MATTERS.—COMING DINNER OF THE NEW YORK GARDENERS' SOCIETY.—OPENING MEETING OF NEW YORK FLORISTS' CLUB.

Everything in and about the city flower marts indicates that we are still under the spell of the mid-summer stagnation. Some of the wholesalers, however, whose fingers are constantly on the pulse of business, seeking for symptoms of returning life, think they can detect signs of awakening. The smallest of favors is thankfully received and every little movement brings encouragement for it has been a long, dull summer and a change will be welcomed by all. There are many causes—among them the happy close of the war—which contribute to a widespread confidence here that the coming months will bring a little of the old-time prosperity to the florist trade. Certainly no business stands in greater need of it and none has borne the depression and losses of the past few years with greater courage.

Roses everywhere are making fine growth in the benches and in many places carnations are already housed and looking well. The growers and commission men are beginning to make shy glances and affectionate little overtures towards each other, preparatory to more intimate relations and they will soon start to line up, some for the season, others till a fortnight before Christmas or some other equally opportune time for creating a little diversion.

Returning pilgrims from the Omaha convention report broiling weather there and on the homeward trip but otherwise are enthusiastic over their experiences and there are many who, now that it all went off so satisfactorily, express regret that they did not have the courage to participate. Detroit seems to be generally regarded as an excellent selection and it is possible that New York may be an applicant for the next turn.

The New York Gardeners' Society will have its annual dinner on September 10 at the Central Opera House. There are some fine alleys there and a bowling tournament is to be arranged to take place at that time, when all florists' teams in the country will be invited to take part.

The New York Florists' Club will hold its opening session for the coming season at the club rooms on the second Monday evening in September. The president is contemplating something of a social nature as an attraction at that time and no doubt a good attendance will reward his efforts.

St. Louis.

RETURNING CONVENTIONITES BRING THE BOWLING TROPHY.—MEMBERS OF THE TEAM NOT YET FULLY RECOVERED.—ALREADY PLAN A SECOND AND FINAL WIN AT DETROIT.

The pilgrims have all returned from Omaha excepting John Young and Fred Weber, who are pursuing their travels through Colorado, and it is needless to say that the St. Louis contingent is in a happy frame of mind. Our reception was warm, in fact it was entirely too warm on the part of the weather, as we were greeted with three of the hottest days of the season.

Members of the bowling club were too tired to assemble in full force at the alleys on Monday evening, and the reception that is to be tendered them has been postponed until they have fully recovered, and the weather has moderated. Congratulations appear to be in order and from the way they are being extended to members of the team one would judge that bowling is popular even among those who never show up at the alleys. All joking aside, however, the win of the St. Louis team seems to be popular and is fully deserved as a fitting reward for the steady, faithful practice which has continued uninterruptedly since the first organization of a bowling club previous to the St. Louis convention.

With the courage gained from having won this season, the boys will go to Detroit much better prepared to put up a stiff fight for first honors, and anyone beating them out will know they have been in a big game.

Quiet still reigns in the market. Trade in other lines, especially among the wholesale houses, is brisk and far ahead of anything St. Louis has had during the past four or five years; country merchants are buying heavily. If this can be relied on as a barometer, we are in for a very good season, and it will be most welcome to all. R. F. T.

Greenhouse Building.

Houston, Texas.—Wm. Kutchbach, greenhouse 35x60.

Rochester, Minn.—Mrs. M. J. Hyde, new residence and one house for roses.

Toledo, O.—E. A. Kulinke, one commercial house.

Western Springs, Ill.—Vaughan's Seed Store, three houses, each 18x125.

Beardstown, Ill.—F. Burtenshaw, new greenhouse and modern heating plant.

Hartford, Conn.—John Coombs, three houses each 20x100.

Warren, R. I.—A. E. Covell, large greenhouse.

Boston.

WATER LILY DAY AT HORTICULTURAL HALL UNDER THE AUSPICES OF THE MASSACAUSETTS SOCIETY.—HENRY A. DREER MAKES A FINE DISPLAY.—NOVELTIES WERE IN PROFUSION.—NOTES OF THE EXHIBITS.

Water lilies were scarce at Horticultural Hall on the day of the annual exhibit. Wm. Tricker, representing Dreer, was the only exhibitor. Very few of the better known kinds were shown; nearly all were recent varieties, some not yet introduced.

Among hardy varieties the finest was Nymphæa Gladstoneana. It is a form of the European N. alba, but far superior to the type and much better than N. candidissima and Marliac's N. albida. It is notable for breadth of petals and purity of color. N. Doogueana is a pink form of N. alba, delicately toned. N. tuberosa Richardsoni is nearly double and a great improvement on the type. N. Laydeckeri lilacina is a finely shaded rose; N. odorata Luciana, carmine pink, a great improvement on N. Caroliniana. Marliac's N. carnea and N. rosea are splendid acquisitions. N. alba Falconeri is a very deep rose and promises to make an important addition to the family. N. Robinsonia is a lovely warm rose.

Tender nymphæas were well represented. The light blue Australian species, N. gigantea, with staminate center, made a beautiful contrast. N. pulcherrima is another fine blue. It is a seedling from N. scuttifolia, and better and larger than N. Zanzibarensis, as well as a continuous bloomer. N. O'Marana, pink, of N. dentata type, is a cross between N. Sturtevanti and N. dentata, a very large bloom and freer than the parent. N. Deaniana, large pink, is after the N. Lotus type. N. rubra rosea is finely toned; N. delicatissima, lovely shade of pink.

Nelumbium Shiroman is a fine white Japanese double form of N. speciosum, a giant in growth and exceedingly attractive. The leaves are three feet across. Besides the above were N. lutea, N. speciosum Kermesina and N. striatum.

Dreer showed a remarkable lot of Italian and American cannas. W. N. Craig, of Taunton, hardy flowers, including the new Helianthus rigidia, Miss Mellish; Geo. Hollis, of South Weymouth, phloxes, Gen. Brice, scarlet, Richpin, white, pink eye, and Messenta, purple, especially worthy of mention. Rea Bros., of Norwood, also showed hardy flowers; J. Warren Clark, of Rockville, seedling gladioli, mostly of the Gandavensis type; these were exceptionally fine, and well worth especial mention.

Stanhopea tigrina, a remarkable orchid, was exhibited by E. A. and W. K. Wood, of West Newton. Asters came from Mr. Southers, of Jamaica Plain, and dahlias from William Winter, of Mansfield. A fine piece of Cypripedium Morganiæ from J. L. Gardiner, a large display of native flowers from Mrs. Richards, and native mushrooms made up the remainder of the show. T. D. H.

Japan lilies, asters, hydrangeas and gladioli fill the windows of the florists' stores now and constitute the bulk of the stock on hand, although if one takes an inquisitive look into the refrigerator he may find a few vases of unassuming roses, and carnations that have been picked out of doors, together with a few dozen sprays of lily of the valley waiting for a chance funeral order or a wedding that has been injudiciously arranged for the temper-trying weather which Boston is now experiencing and which the Omaha travellers are accused of having brought with them from the city on the plains.

The Garden Committee is quite well, thank you. The final one of several visits of recent date took place on Wednesday, the E. S. Converse estate at Malden being the objective point. Here the visitors were received by D. F. Roy, the gardener, and his hospitable lady, and were quickly made to feel at home. After a tour through the greenhouses and grounds, brief because of the intense heat, they sat down to one of the finest meals that it has ever been their good fortune to grace in their long term of service in this line, and to which they did ample justice, topping off with Grizzly Muscats, Black Hamburgs and similar hothouse products, of which we sometimes read, but seldom sample. Mr. Roy is a skillful grape culturist and four beautiful houses testify to that fact. Among other things that attracted much admiration were some magnificent begonias of the Rex type, of enormous proportions and perfect finish; elegantly grown ferns and stove plants, specimen chrysanthemums, and outdoors some fine ornamental beds, including several of Begonia Vernon and B. Erfordii, whose value as outdoor bedders is here thoroughly demonstrated. Mr. Roy has been in charge of this estate for ten years and it shows throughout the handiwork of a thorough and devoted gardener.

The American Forestry Association held their annual meeting at Horticultural hall on Wednesday and Thursday, August 24 and 25. There was a large attendance of gentlemen interested in tree culture and preservation and several valuable papers and addresses were presented.

A party of eight of the Old Guard enjoyed a picnic on the steamer Lewiston to Isles of Shoals on Wednesday, and all came back well sunburnt.

In town: Chas Loechner, New York; S. S. Skidelsky, Philadelphia.

Philadelphia.

HOME FROM THE CONVENTION.—ST. LOUIS PULLED THE STRING ATTACHED TO THE EVANS CUP.—BOWLING SUGGESTIONS.—EVERY ONE WAS PLEASED WITH THE RECEPTION AT OMAHA.—BUSINESS QUIET.—STOCK SHOWS IMPROVEMENT.—CARNATIONS ARE SCARCE.—SEED STORE ACTIVITY.

They are all back from the convention, but the cup did not come with them. There was a string attached when we got it in Providence last year; Brother Evans offered it that way. We didn't think much about the string them, it was a mere card, but about the first of August it seemed to swell and grow, until finally there was room for plenty of hands to take hold. When the cup reached Omaha those St. Louis boys fell in love with it and became tangled up with the cord; they proved their right to keep it this year. John Westcott says they won it like gentlemen and are, no doubt, proud, as they should be, of their achievement. The string is still there, however, and from all accounts there will be many hands outstretched at Detroit next season eager to grasp it. Those Buffalo chaps are great bowlers and if there were only more of them there is no telling what prizes they might win. We think, in all fairness to contesting teams, that made up or mixed clubs should not be allowed to take up the time when they have no chance at the prize. We believe that now would be a good time to institute a National Florists' Bowling League, with rules for conducting the tournament in a business-like manner so that all shall have equal advantage. We would earnestly suggest that teams should consist only of bonafide florists who shall be members of, and reside in the city represented by the club.

The boys are more than pleased with their reception in the convention city. They particularly mention the trolley ride and generous treatment received at the hands of Mr. Wilcox and his charming wife, and the many pretty girls who attended to their wants about the bounteously laden boards will linger long in their memories.

Business is quiet; it always is this time of year. A little seashore demand together with the more or less work for the funerals that are always with us help to keep down the surplus. The weather is very warm again and will have a bad effect on stock. Beauties are improving; the stems are becoming longer and the flowers a trifle larger. Special Kaiserins, the Lonsdale brand, as good as the best winter stock, bring $5 and $6 per hundred. Carnations are scarce; 50 cents to $2 per hundred is the price, the latter for a few extra Flora Hill. The seed stores begin to show some activity in getting out their bulbs. Romans, narcissi, Bermuda lilies and other stock is displayed in large quantities.

Abraham Knowles died at St. Joseph's hospital on Tuesday, August 23, of typhoid fever. Deceased was an associate member of the Florists' Club and much liked by his fellows. The body has been embalmed and the funeral will take place in about ten days, on the return of his wife and family from England where they only recently journeyed to visit relatives.

K.

Chicago.

SWELTERING WEATHER GIVES THE MARKET A SET BACK.—TOO MUCH STOCK FOR THE DEMAND.—HEAT MAKES ROSES POOR.—SOME SPLENDID ASTERS.—PLANTING CARNATIONS UNDER DIFFICULTIES.—A NEW RETAIL STORE.—CONVENTION VISITORS.—JOTTINGS.

The cut flower market has been in pretty fair shape during the past month, but in the first days of this week it received a decided set back. The weather was as hot as has been recorded this summer and both buyers and blooms suffered from Old Sol's keen rays.

There has been a larger cut of all flowers than the market could assimilate and prices have taken a reactionary step. The best Beauties now coming in command but $2 per dozen where poorer flowers two weeks ago sold readily at $2.50. Carnations, which have been quite strong in price, have weakened in sympathy with other crops and $1.50 will now buy the best 100 blooms in the city. There are virtually no Testouts in the market and while Brides, Bridesmaids, Perles and Kaiserins are occasionally received in qualities commanding long prices the bulk of the stock is of the penny order.

The extreme heat is responsible for the poor quality of much of this week's cut. With the thermometer registering from seventy to ninety during the hours from dark till dawn it is a pretty hard matter to capture roses in the bud and as a consequence most of the stock has been wide open, with the balance too close to fetch a price. On Tuesday, one of the hottest days, one fakir drove a Beauty bargain whereby one of the wholesale houses parted with seventy-five flowers for $1.10.

The stems ranged from one to two feet in length, but, of course, the blooms were flat and necessitated immediate sale. Every one is busy sorting in these days.

The cool wave which arrived on Wednesday was most welcome and somewhat alleviated the aggravating conditions in both market and greenhouse.

The quantity of flowers has been increasing each day and there is now a glut in several lines of stock. Asters are in superabundance and sweet peas and outdoor lilies are too plentiful. This year's cut of asters has been particularly large and fine. Several growers have sent in blooms as big as fair sized chrysanthemums, but with a number of them this week has seen the end of the crop.

Nearly every grower has spent the week in planting carnation houses, but the work has progressed under difficulties. The advice of those who preach early planting is being very generally accepted this year and the indoor movement of plants was begun much sooner than is usually the case. One reason for this is the fact that it has been a good growing season and everybody has good, large, stocky plants. But the hot wave made the filling of houses a very trying task. It was almost impossible for workmen to exist in unshaded houses and the plants felt the heat almost as much as did the men.

Chicago is to have a new retail store for the fall season and one which is to eclipse anything in the city. The work of fitting up the store is now under way and the proprietor, J. N. Anderson, of the Anderson Art Company, corner Wabash avenue and Madison street, expects to be ready to receive the elite by the middle of September, which is as soon as the resorters will forsake the cool breezes of lake and sea and mountain. Mr. Anderson has chosen New York's swellest flower store as a model for his establishment and is lavishing his bank account in his decorative work. His location, on Madison street next door to his art store, at the elevated railroad station and where the crowds to the south side cable and Illinois Central pass, is one of the best in the city.

The convention visitors again took possession of the city on Sunday and Monday and have been lingering with us all the week. The Cleveland delegation, headed by Adam Graham, visited Milwaukee by boat on Sunday and then proceeded on their homeward way. The New York contingent spent Sunday here and a quartet consisting of Robert Craig, of Philadelphia, and A. Gude, brother of Pres. W. F. Gude; C Schellhorn and F. H. Kramer, of Washington, devoted Sunday to Bassett & Washburn's at Hinsdale and Monday to Reinberg Bros.' great establishment. Among other visitors were Cornelius Loder, of the National Florists' Board of Trade, C. H. Reed, of Birmingham, Ala., J. E. Killen, representing C. H. Joosten, Emil Leuly, of West Hoboken, and J. G. Esler, of Saddle River. Mr. Esler found the time ripe to gain a number of members for the Hail Association.

Harry A. Balsley, the red pot man and president of Detroit's park commission; A. L. Brown, of Philadelphia; W. W. Coles, Kokomo, Ind.; Philip Gauges, Washington; E. G. Hill, Richmond, Ind.; A. Klokner and C. B. Whitnall, Milwaukee; D. B. Long, Buffalo; Chas. Longinotte, J. F. Sibson and wife, and John S. Westcott, Philadelphia; A. Schmitt, Glennville, O.; W. J. Vesey and wife, Fort Wayne, Ind.; and the veteran Antoine Wintzer, of West Grove, Pa., made brief visits here while homeward bound from the convention.

J. S. Wilson was taken ill upon the train while returning from Omaha and was assisted to his home at Western Springs. His improvement was rapid.

A. J. Graves, of Bloomington, was a visitor on Thursday. Mr. Graves is making a number of improvements to his establishment.

Edgar Sanders was elected vice-president for Illinois at the Omaha meeting of the S. A. F. He will fill the office with dignity and distinction.

Louis Gresenz, of Bassett & Washburn, returned Monday from a two weeks outing among the Wisconsin lakes. Mrs. Horton has gone east for her vacation.

W. E. Cook, formerly a traveler for the late firm of Pitcher & Manda, is engaged in the life insurance business here.

C. N. Thomas, accountant for A. L. Randall, is at his old home in Pennsylvania for his vacation.

Mr. and Mrs. Uriah J. Virgin, of New Orleans were callers this week.

WILLIAM TIFFANY died in Boston August 25.

DIXON, ILL.—Mrs. Wm. Pankhurst has sold her greenhouse and has leased her garden to Frank M. Davis, of Polo, Ill.

FREEPORT, PA.—John Flemm died at the age of 55 years. He was the father of William Flemm, the florist at Sixth and Liberty streets, Pittsburg.

AMBOY, IND.—F. B. Tinker has demolished a portion of his establishment and will erect a greenhouse thoroughly modern in every particular.

LOUISVILLE, KY.—Burkard Zoeller, aged 67, and the oldest gardener in Jefferson county, died of dropsy, August 12. He leaves a wife and eight children.

AMES, IA.—Prof. John Craig, of Cornell University, Ithaca, N. Y., has been chosen to succeed Prof. J. L. Budd, who recently resigned the chair of horticulture and forestry in the Agricultural College.

FREMONT, NEB.—Chas. Green, of Green & Nicol, was planning to attend the Omaha convention but as an inducement to stay at home Mrs. Green presented him with an eight and one-half pound son.

FLORISTS' HAIL ASSOCIATION.

SECRETARY'S REPORT, AUG. 1, 1898.

The Florists' Hail Association at this date consists of 762 members. The risks are upon 2,594,982 square feet of single thick glass, 5,468,067 square feet of double thick glass, an extra one-half insurance upon 162,213 square feet of single thick glass, and 301,078 square feet of double thick glass, an extra whole insurance upon 556,697 square feet of single thick glass and 1,337,706 square feet of double thick glass, the whole being equivalent to a single insurance upon 10,189,097 square feet of glass.

The Reserve Fund consists of $5,200 in securities (all of which are worth at least par and some would command a premium of 8 per cent), and $662.48 cash in the hands of the Treasurer, making a total of $5,862.48.

The amount of Emergency Fund in the hands of the Treasurer on August 1, 1898, was $2,318.45, making a total cash balance of $2,980.93.

The eighth assessment levied March 1, 1898, amounted to $5,790.18. Other receipts have been, from interest on investment, $235.32. Money drawn which had been temporarily invested, $2,500. Refunded by R. Brown & Son on re-adjustment of loss, $360.21. Evanston school fund paid before due, $500. New business for year ending August 1, 1898, $1,650.14. These items, with last year's balance of $5,581.05, make a total of $16,616.90.

The expenditures have been: Losses, $7,585.88. Investments, $5,200. Running expenses, $850.09, making a total of $13,635.97, leaving a cash balance of $2,980.93 in the hands of the Treasurer, of which $2,318.45 belongs to the Emergency Fund.

The losses during the past year have exceeded any previous year, 77,341 square feet of single thick glass having been broken, and 48,711 square feet of double thick glass.

One square foot of single thick glass has been broken to every 33 and 42,739-77,341 feet insured and one square foot of double thick glass has been broken to every 110 and 9,857-48,711 square feet insured. The feature of the past year has been the large percentage of breakage of double thick glass as opposed to the small percentage of last year. Also the large percentage of delinquents on the eighth assessment, which was largely due to deaths, failures, removals, dissolution of partnerships, retirement from business and other causes. The large volume of new business has more than taken the place of the delinquents who retired.

Your Secretary has also to report the discovery of two errors in proofs of loss.

A recount of glass was made by a special agent employed by the Secretary and a re-adjustment of losses was made. R. Brown & Son, of Kansas City, promptly refunded to the Association $360.21. The re-adjustment of the loss of Baker Bros., of Kansas City, amounting to a balance of $85.62 in favor of the Florists' Hail Association, is still pending, owing to their absence from home. The Association has the assurance of their attorney that it will be attended to promptly upon their return.

The annexed table may be of interest to those who are desirous of locating the hail belt. Your Secretary does not suppose for a moment that he has been able to locate every hail storm for the past eleven years, but he has done so as far as he has been able, and the information furnished is interesting to those who are willing to study statistics.

STATES.	No. of hail storms from June 1, 1887, to August 1, 1898.	No. of losses paid from June 1, 1887, to August 1, 1898.	No. of hail storms for year ending August 1, 1898.	No. of losses paid for year ending August 1, 1898.

Three violent storms doing great damage have been noted this year—one at Kansas City, Mo.; one at Harrisburg, Pa., and one at Auburn, N. Y. The Association lost heavily at Kansas City, because nearly every florist was insured. At Harrisburg and Auburn they lost nothing because no one was insured.

The value of hail insurance may be inferred.

JOHN G. ESLER, Sec'y.

THE SEED TRADE.

AMERICAN SEED TRADE ASSOCIATION.

EVERETT B. CLARK, Pres; JOS. A. BOLGIANO, 1st Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

WISCONSIN pea growers report a probable shortage at Manitowoc of from 25 to 30 per cent.

J. COMONT, representing James Carter Dunnett & Beale, of London, is making his fall trip through the United States.

IT is reported that Messrs. Goode & Reese have sold *How to Grow Flowers* to Mr. Thomas, recently business manager of that paper.

THE Illinois Seed Co., which recently suffered a considerable loss by fire, has completed the extensive repairs necessitated by the conflagration.

AT Waterloo, Neb., a grower estimates that the very severe hot winds of August 18, 19, and 20, have injured the vine seed crops from 25 to 40 per cent.

Odense, Denmark.

Chr. F. Kintze, one of the oldest and best known florists of Copenhagen, died recently. He was one of the first growers of cauliflower seed and in 1860 the first to export it. He was president of the Gardeners' Aid Society.

Notwithstanding prolonged cold, wet and stormy weather, reports from several growers indicate that seed cauliflowers are doing well and give promise of a large crop. H. H.

The Harrisii Lily Disease.

In an official report dated July 13, Superintendent G. A. Bishop, of the public gardens of Bermuda, attributes the Harrisii lily disease to heavy manuring with farmyard manure, repetition of the crop upon the same ground, reduced vitality, bad selection of stock and in some cases insufficiency of plant food. These render the bulbs prone to attacks of fungi or soft rot. It is stated that when the fungi or rot has taken possession of the bulb its roots and base become rotten, after which it is liable to be attacked by the eucharis mite. Mr. Bishop is led to these conclusions by extensive investigations on the ground and he prescribes a course of treatment in the full belief that it will, in the course of a year or two, restore the lily industry to its former prosperity.

Bulb Growing in the Northwest.

A lot of about 10,000 young-brood bulbs of different varieties of single tulips were shipped a few days ago from one of the Chicago parks to Fairhaven, Wash., where they, together with nearly 3,000 of one, two and three year-old hyacinths and tulip bulbs, imported from Holland, will be planted out on trial fields at Fort Bellingham, Everson and Welcome in Whatcom county. The culture of Holland bulbs in the above named region of western Washington has some time ago passed the point where further experimenting becomes necessary, as is fully proven by the pronounced success achieved during the past five years on the limited area of land devoted to the growing of hyacinths, tulips, crocuses, narcissi, lilies, gladioli, etc., by Geo. Gibbs on Orcas Island, C. F. Larrabee, of Fairhaven, and two other gentlemen—Messrs. Canfield and Bock, horticultural enthusiasts—who desire to locate these new trial fields at the points mentioned because the three Holland bulb growers who visited Whatcom county last May (W. Warnaar, L. Van Leeuwen and Harman C. Bartman) pointed out these localities during their brief stay as being especially favored with the right kind of soil for hyacinth growing, and because it is desired to convince the most skeptical that bulbs can be grown on the main land of Bellingham Bay just as perfect and in every way equal to the best imported bulbs.

ANDREAS SIMON.

Cleveland.

NO SURPLUS OF STOCK, ALTHOUGH TRADE HAS NOT YET LEFT THE SUMMER RUT.—NOTES AND COMMENT.

Business continues in the old rut. There is no scarcity of flowers, although outside of asters, carnations and gladioli not many are offered. Roses are improving somewhat, although continued weather such as we are experiencing will undoubtedly affect them unfavorably. The temperature for several days has been hovering about the ninety mark, with an occasional spurt above that point. Asters are about the usual quality, some few disbudded Semple's strain being seen.

James Eadie's store, now in process of being remodeled, will soon be finished. When done it promises to be about the handsomest in town.

The Omaha delegation has returned and speak highly in praise of their entertainment. They stopped over in Chicago both ways and on their return took a little side trip up to Milwaukee. A.

Jackson, Miss.

The popularity of the chrysanthemum promises to occasion the establishing of a new industry here. Some very fine specimens grown in private gardens have caused several parties to experiment with them for commercial purposes. Close at hand there are two immense gardens of chrysanthemums, one of five hundred magnificent specimens owned by W. J. Brown, Jr., and the other covering an entire acre of ground containing fifteen hundred plants, owned by Messrs. William Hemingway and A. D. Galloway. These latter gentlemen have in their garden forty-two distinct varieties and all of the various colors so much in favor in the north. Offers already made seem to assure financial success.

GORDON, NEB.—L. Jones has effected an exchange whereby he comes into possession of the Chas. May greenhouses.

AMERICAN FLORIST COMPANY,
324 Dearborn St., Chicago, Ill.

THE NURSERY TRADE.

AM. ASSOCIATION OF NURSERYMEN.

A. L. BROOKE, Pres.; E. ALBERTSON Vice-Pres.; GEORGE C. SEAGER, Rochester, N. Y., Sec'y.

H. G. BRYANT, of the nursery firm of A. Bryant & Sons, Princeton, Ill., has been vacationing in South Dakota.

SAN DIEGO, CAL.—J. W. Huggins, a pioneer fruit grower, died at the age of seventy-two years. He left a large estate.

VICKSBURG, MICH.—The Vicksburg Nursery Company has begun its annual harvest of moss on its marsh at Portage. The crop will be larger than usual.

KALAMAZOO, MICH.—The Central Michigan Nursery Company is making a number of improvements to its plant, principal among which is a packing house and cold storage cellar 40x125.

CHARLESTON, ILL.—James Faris, who was born in Kentucky in 1808, died here in his ninety-first year, after a life spent in the nursery business. He leaves four children and many broad acres of land.

WILMINGTON, DEL.—Jacob L. Brown established the Roseland Garden and Nursery forty years ago and has enjoyed this year the best trade in his record of four decades. Mr. Brown expects much from the approaching season.

PAINESVILLE, OHIO.—The Storrs & Harrison Company has just completed another range of twelve greenhouses, each 22x100 feet, at a cost of about $10,000. The material was furnished by the Lockland Lumber Co. The houses will be mostly devoted to the growing of young H. P. roses.

Some Carolina Plants.

North Carolina has, from times unknown, enjoyed the distinction of being natural home of the greatest percentage of all the woody and herbaceous plants North America produces. This fact has been acknowledged long ago by planters and florists who are drawing freely upon its resources for their work, depending, however, so far especially, upon the western part of the state. So it happens that the central and eastern sections have been left in almost virgin condition. Under the shade of the longleaf pines, in the sandy loam and the muck of the creeks there are flourishing, however, many floral gems which have to be known, only, to be appreciated, and which will prove a boon to the florist and landscape gardener. My space here being limited I shall enumerate only a few of them at present.

Clitoria Mariana (butterfly pea) is a climbing or trailing representative of the pulse family. It has large, glossy trifoliate leaves out of the axils of which the large dainty light blue flowers appear in spring and will last through the whole summer. Galactia glabella (milk pea) is another climbing member of the same family. Its foliage is smaller but equally glossy as that of the above. In July the whole plant will be fairly covered with bright red blossoms. This very graceful climber of about four feet in height makes a splendid show when in bloom. It ought to be very valuable for many decorative purposes. Jatropha stimulosa (spurge nettle) will be found very useful in landscape work. It has beautifully shaped and tinted leaves and produces flowers of the richest cream color all through the summer. Its only drawback is that the plant does not bear much handling on account of its stinging properties. Its roots are of a very peculiar cylindrical shape, about twelve inches in length and are said to be of good taste.

Lupinus diffusus (deer cabbage) cannot be overestimated for its soil-binding and ornamental qualities. It forms large tufts one to two feet in diameter, has silvery white, downy foliage and sends forth its masses of flower trusses of light blue or sometimes pinkish color in April and May. A field of L. diffusus in bloom offers a splendid sight. The cut flowers will remain fresh for quite a while. Who has not heard of the lovely pyxie, Pyxidanthera barbulata? Quite closely resembling a moss during the balance of the year, in early spring it is completly covered with innumerable tiny pinkish daintily fragrant biossoms which endear the plant to everybody. It succeeds best in very moist ground, being found originally along the edges of our creeks. Zygadenus glaberrimus is a very stately and grand representative of the lily family. Its large flowers are o a creamy yellow color and appear in July upon spikes from four to six feet in height. They last a long time whether cut or left on the plant and are very valuable for many decorative purposes.

OTTO KATZENSTEIN.

BRIDGETON, N. Y.—Aubrey Grace has engaged with Edwards Bros., to learn the florist business.

SKOWHEGAN, ME.—C. E. Leighton is now nicely installed in his new greenhouses on the east side of the city and has a very neat establishment.

DUBUQUE, IA.—W. A. Harkett, of Harkett's Floral Nursery, has returned from a trip to Omaha where he made a study of the floral features of the exposition and attended the S. A. F. convention.

CHAMPAIGN, ILL.—J. E. Yeats has returned from Omaha where he exhibited his new invention, an alarm attachment for greenhouse heating pipes, at the convention of the Society of American Florists.

Comment Concerning California.

I have just returned from my trip to the Pacific coast where I enjoyed myself very much and feasted on fruits and flowers to my heart's content. California has had an exceptionally dry season, but the flowers are blooming in great profusion and fruit seems to be abundant.

I called on A. W. Thompson, who has a large fruit ranch three miles west of Petaluma in Sonoma county. Mr. Thompson has several thousand apple, pear, plum, peach and cherry trees and says that apples and pears are the most profitable fruits to grow, especially in that locality. He is selling his pears at $20 per ton. His summer apples, the Gravensteins, are just ready for market and bring $40 per ton, while the Alexander only brings about $30 per ton. Spitzenberg, Yellow Newton, Pippins, Sonoma Seedling, Greenings, Bellflower and other fall and winter varieties are in good demand at about $40 per ton. He thinks his Bartlett pears will yield him fully 500 pounds per tree and he has about 2,000 trees. They call this an off year on account of drought and late frosts. That vicinity is greatly troubled with the apple worm or codling moth and Mr. Thompson says that it would be worth hundreds of dollars annually to that vicinity if they could find something that would effectually destroy them. They have used salt lime, sulphur solution and Paris green, all without the desired effect.

Cherries and plums have not paid for picking this year. I saw both fruits so thick on the ground that I could not take a step in the orchards without stepping on them and in places the plums were four and five deep so that one could have shoveled them up by the carload.

I visited Mr. Burbank, at Santa Rosa, and found the most interesting man that I met on the Pacific coast. He is to fruits and flowers what Edison is to electricity and his new plum is one of the most delicious that I ever tasted. His yellow calla lily is a beauty and he showed me a pure white tigrida, also a double marguerite and many other new things which were truly wonderful.

I called at the Lemmon Herbarium and found Professor Lemmon a very courteous and instructive gentleman. I passed a very pleasant evening among the pine cones of the west, for his rooms are covered with every variety of cone known and I brought away from his place a bulb of Lilium rubescens a very rare and beautiful plant. E. E. KENNICOTT.

Reading, Pa.

Hoskins & Giles have consummated a deal whereby they take possession of the store and greenhouses on South Fifth street, formerly occupied by J. G. Brown. Their own place on Tenth street underwent some extensive improvements this summer and is now in the best of condition.

Mr. Hoskins is a man of very sound judgment, possessing the happy faculty of seeing things from a greater distance than is given to the average mortal; hence, when he takes a step, "onward" is the word that might, with safety, be passed all along the line. It is Mr. Hoskins' opinion that we are on the eve of a prosperous season. HOMO.

Houston, Texas.

Trade has been very good all the year. Of course the sale of plants is not much at this time, but the call for cut flowers, bouquets, wedding decorations and funeral designs is greater than usual. We are now preparing for our fall and winter trade, and as the war is ended we look forward to a good run of business.

Wm. Kutchbach is building another greenhouse 35x60 feet.

W. W. Westgate is engaged in the wholesale plant trade. N. E. W.

BURLINGTON, IA.—Jerome Bock has just completed two fine greenhouses 20x80 feet.

Mention the American Florist.

A Suggestion.

Like every other popular family of plants, phloxes are being raised from seed and the seedlings sent out as new varities, whether or not they differ from those of previous years. Every season there are phloxes shown in Boston by different exhibitors that are identical in everything but the name. We are trying this year over 160 varieties, having the newest and most distinct sorts from several collections, and shall try to pick out the most worthy, but it is a hard job and cannot be done in one season. We expect to keep back twenty-five or thirty varieties for trial next season, planting those most alike next each other, and shall quite likely reduce these to twelve or fifteen kinds.

Pæonics are nearly, if not quite, as badly mixed as regards names, and each season the differences in the new varieties are becoming less and less. Now that these two families are regaining their popularity we would suggest a similar trial for them, as was given the perennial asters, narcissi, etc., in England. Some central locality could be fixed on, to which plants of all varieties of these two families could be sent from all nurseries and private gardens where large collections are grown. One or more years could be given to each family, or each family could be tried in a different locality. The experiment stations could, perhaps, be made available. These trial collections would, we feel sure, be of great use and interest to many, and help to make the two families more popular. Other families could be tried as it became needful. R. N.

Massachusetts.

TOPEKA, KAS.—Prof. E. M. Shelton, who for nine years has conducted a government school of horticulture at Brisbane, Australia, is soon to return home.

CHINOOK, MONT.—Al. Harrison, of the Sweet Grass country, is the pioneer of a new industry in this region. He has shipped two cars of sheep manure to a Boston florist firm and has orders for several cars more.

TRADE SHOWS LITTLE LIFE AND THESE ARE VACATION DAYS.—VISITORS.—LUDWIG'S HANDSOME NEW STAND IN ALLEGHENY MARKET.

There is no improvement in business and the florists are taking things easy. Several are away on vacations, but only Gustave Ludwig and family, went to Omaha. Mr. Edward Reid, of Philadelphia, accompanied Mr. Ludwig on the trip.

Arnold Ringier, representing W. W. Barnard & Co., Chicago, was a visitor last week.

E. C. Ludwig has remodeled his stand, and now has one of the finest places in Allegheny market. It is ten feet wide by twenty feet long. The refrigerator is ten feet long and is finished in oak. The tops of the counters are Tennessee marble. The ceiling is iron of a handsome design and is studded with electric lights. The cost of refitting the place was over $1500. Immediately opposite one end of this stand Mr. Ludwig has another which is used as the work room for making up designs, etc. REGIA.

Everybody is more pleased if you say "saw your ad. in the American Florist" when writing.

Please mention the American Florist

Worcester, Mass.

During the last two weeks we have hardly experienced a day in which we have not had more or less rain and the deluge ended on August 19 with a cloudburst that did thousands of dollars worth of damage. Beyond a few washouts I have not heard of any serious damage to florists' property, though several plots of carnations and violets were under water for four or five hours, which did not benefit them any.

Nearly all the asters in this vicinity have been attacked by some disease that has ruined nearly every plant irrespective of variety, although the Comet and Semples have suffered the most severely. Plants that were in splendid shape six weeks ago, turned yellow, the buds blasted and turned brown, and finally the plant died. What the cause is nobody seems to know and we would be very grateful if some aster specialist would enlighten us.

Carnations in the field are coming along nicely and we will soon begin housing them; all hands are busy now in getting the houses ready for their reception.

Trade is picking up slowly and in another month we should be doing a good business. At present the supply of flowers is about right, with the exception of carnations. Roses are improving every day, Kaiserin still being ahead of anything coming in.

Dan MacRorie, representing W. A. Manda, was in town for a day last week.

A. H. L.

Hammond's Paint.
GREENHOUSE WHITE.
For 20 years many Florists throughout the United States have used this paint.
The purest and most durable that can be made.
At prices to the craft that will pay to use it.
BENJAMIN HAMMOND, Fishkill-on-Hudson, N. Y.

Rochester, N. Y.

Trade has been rather slow for sometime. The regular, every-day funeral work helps along a little, but we rarely see all hands busy in a store. Flowers are quite abundant. Roses are poor at from $4 to $8 per 100. All other stock is cheap but qualities have improved wonderfully in the last three weeks.

Last week about fifty of our florists responded to an invitation from Vick & Hill to visit their establishment at Barnard's crossing, a few miles out of the city. The greenhouses as well as the spacious grounds were found to be very neatly kept; not a single weed could be detected in even the most remote corner and all stock is in a flourishing condition and remarkably healthy. Their new aster, Daybreak, was inspected and all comments were favorable; in a whole acre, there is not a flower which shows the least sign of a yellow center. The blooms are very double, with long, broad petals, resembling a good sized Bergmann chrysanthemum and the stems are eight to ten inches long. It is a better pink than Semple's, and will undoubtedly become very popular as a market flower. There is also a pure white form of it. Everybody partook of a bountiful lunch and the good time continued until late in the evening. Bobby Bard, the expert rose grower from Syracuse, happened to be in town and, of course, was one of the guests, happy as ever. K.

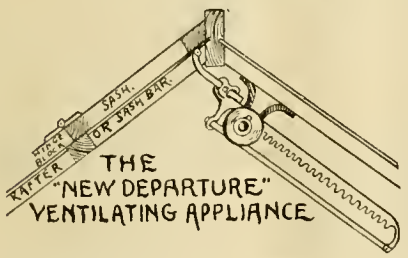
BUSINESS SHOWS A SLIGHT IMPROVEMENT.—SWEET PEAS A FAILURE.—BEETLES DESTROY ASTERS.—PLANS FOR NEXT YEAR'S CONVENTION ARE ALREADY DISCUSSED.

Business has been better the last few days as we have had several occasions which called for quantities of flowers, but good roses were very scarce. Sweet peas are a failure in many places and no one can give a good reason for it. Many of our amateurs have not picked any flowers this season. Asters have been coming in but a small black beetle in some places destroyed the entire crop. Some growers have sprinkled with Paris green, but it is rather a dangerous thing to do.

Some of our florists have planted their carnations inside on account of the grasshoppers and the weather is very hot again, but it doesn't seem to affect them.



We hear that the Society of American Florists is coming to visit us next year and has made our president, Philip Breitmeyer, its vice-president. The Florists' Club is pleased to have them come and will try to give them a good time. We hope to see a big crowd. We will have a shoot so that Philadelphia can get out her blooded stock, also a bowling contest but Buffalo won't take the Evans Challenge Trophy home; it will stay in Detroit. R. F.

Our Trade Directory.

No wholesale dealer in plants, seeds, nursery stock, heating apparatus or florists' supplies can afford to do business without the American Florist Company's Trade Directory. This handy volume of 351 closely bound pages lists every dealer in the business and contains classifications and other information of great value. It is sent postpaid for $2. Bound in flexible and durable leather, handy for the pocket, $3.

Schenley Park Notes.

Pittsburg is rapidly being acknowledged as the foremost manufacturing city not only of the United States, but in many respects of the world, and at the same time it is forging ahead in other respects, notably so in the development of its parks, which ultimately will be strictly up-to-date in their appointments. Schenley Park is the central and largest of them and is just commencing to give to the observer an idea of the magnitude of the task of making this tract of land into a first-class park.

Wm. Falconer, superintendent, is effecting the changes and improvements in a most thorough and systematic manner. A vast amount of grading and road making has been done this year and last spring about 25,000 trees and shrubs were planted out. The arrangement adopted in this work is that laid down in Hooker and Benthami's "Genera Plantarum," and which has been followed throughout except where the situation prevents the growth of a particular order of tree in any particular place.

A beginning has been made on a little lily pond, which is filled with nymphæas, etc. In its neighborhood are clematis, pæonies, calycanthus, chionanthus, magnolias, berberis, hypericum and others. An adjoining ridge is devoted to all kinds of lindens; further on we come to maples and horse chestnuts, with a belting of sumach; then all manner of trees having pea-shaped flowers, the yellowwood, yellow and honey locusts, and the Kentucky coffer tree for example. Beyond that the rose family is represented; it consists of plum trees, ornamental apples, cratægus (hawthorn) and others, with fringes of lesser genera, as roses and spiræas and the saxifraga family, which includes such plants as hydrangeas and deutzias. Then we pass on through sweet gum, witch hazel, aralia, cornus, elder, honeysuckle, the rhododendrons, persimmon, snowdrop tree, privets, catalpa, sassafras, elm, plane (sycamore) trees, walnut, birch, willow, ginkgo and the pines.

The soil of this park being devoid of all surface covering in the way of undergrowth, an effort is being made to cover all of the slopes densely with shrubs, small trees and the stronger hardy perennials, not only for beauty's sake but to conserve moisture, arrest the rainfall and exclude the drying influences of sun and wind. The deleterious gases from the railroad passing through the ravine, and the contiguous iron mills are tending largely to destroy all tree growth, so much so that scarcely an old tree is left alive alongside of them, either in or outside of the park; hence the great effort to reforest their vicinity.

This from the nature of the ground is very laborious as well as expensive planting, or to be more correct preparation for planting. Good soil is very scarce, so that it must be brought from elsewhere, but, owing to the opening of new streets in the immediate vicinity, Mr. Falconer has been enabled to secure quite a quantity, getting the surface soil from several streets one of them a mile in length by 100 feet in width, the depth ranging from six inches to two feet, the latter that part of the street laid out in what was formerly John R. & A. Murdoch's nursery ground; the under stratum is either rock or heavy clay. The method of planting is as follows: For large trees holes from six to eight feet in width and two and one-half to three feet in depth are made, mostly by blasting, and dug out. The bottom is then blasted, in rock using dynamite and for the clay, gunpowder. This shatters it, enabling the roots to make easy passage and affording drainage for surplus water.

The nursery connected with this park, while comparatively new, is one of the best stocked in the country. It is about twenty-four acres in extent and everything is looking in first-class condition. The stock is grown here for at least a year before it is used in the park and the appearance of the things already planted is evidence of the wisdom of this course. The nursery is in charge of Robert Carlisle. In addition to the planting the bridge over Panther Hollow has been completed at a cost of $165,000, the Schenley bridge at a cost of $240,000, the Bellefield bridge at $110,000. The two latter form the main approach to the park. These figures do not include the cost of connecting roads and immediate grounds. A music pavillion of elegant design has been erected. This cost $7,000 and is pronounced one of the best in every way.

The roads are made in the most approved manner, but owing to the clayey formation, have to be cut out very deep so as to be frost proof; the cost is rather steep, averaging about $40,000 per mile. They are from forty to sixty feet wide, with ten-foot sidewalks. Owing to the change of roads, on account of the new bridges being erected and consequent change in grading, the ornamental bedding has been confined directly to the immediate vicinity of the Phipps conservatories. The designs consist in the main of Masonic and Knights Templar emblems, in honor of the Sir Knights' triennial encampment to be held here in October. The plot of ground in front of and between the conservatories and the main

road, which is much lower, will in the near future, be cut down and graded so that the conservatories will appear on higher ground and to much better advantage than at present. This will be a very large job to do as the greater part is rock, but when finished will add greatly to the beauty of the park.

The conservatories proper are in very good condition. The economic plant house which Mr. Falconer has taken great pride in establishing is rapidly improving and to-day furnishes one of the most interesting exhibits here. Guava's in variety, oranges, lemons, coffee, tea and other plants to which the ordinary northern resident is a stranger are growing beautifully, attracting a large number of visitors. In other houses are a collection of fancy leaved caladiums, one of the largest in the country; pitcher plants and other stove house occupants leave nothing to be desired. The Victoria regia house is arranged in a very artistic manner. This and the adjoining nymphæa house are decidedly tropical in appearance. The leaves of the Victoria are over eight feet in diameter and entirely free from blemish, the men in charge having mastered the insects this year.

Preparations are in progress for the chrysanthemum show in the fall. The plants are now in a strictly first-class condition, foliage elegant, and undoubtedly the display will be of the highest character. John Jones has had charge of these this year, as for two years past. Mr. Falconer has appointed Mr. Jones general foreman, in the place of Joe Spring, who removed to Virginia, and Wm. Dole, assistant foreman; both are experts and thoroughly acquainted with the conservatories.

This short account of what has been accomplished in a year under the able management of Mr. Falconer will, in a slight degree, explain to others why we say that one of the finest parks in the country will be that in which his skill is exercised. REGIA.

Lily of the Valley Shower Cluster.

The accompanying engraving of a shower bunch of lily of the valley is merely a suggestion as to one of the forms in which these graceful flowers can be arranged. The ordinary round, solid bouquet was good enough for a long time, and in fact, to this day some florists never give any other arrangement a thought. Such a cluster as this, however, is, we think, more in keeping with the flowing drapery of the bridal veil, and at any rate it is apt to attract more attention on account of its comparative novelty. There are about twelve dozen sprays of lily of the valley in this cluster, most of the foliage having been removed and adiantum substituted, thereby giving it a more light and graceful appearance. Ten yards of satin grosgrain ribbon No. 1 are used, to which loose sprays of the flowers, together with a sprig of maidenhair, are attached after the main bunch has been arranged. K.

Can We Alford to Attend the Convention?

Nine persons out of every ten whom I have interrogated on going to the convention, after having pointed out to them what seems to me to be the advantages, information and opportunities gained from such a meeting, have answered: "I cannot afford it." Gentlemen, this is certainly a mistake. Personally I most certainly feel that I cannot afford to remain at home and thus miss the things of value which only such conventions always bring to florists. Travel and observation such as the annual convention affords furnish men with facts and splendid information. Someone has said: "All that we see becomes a part of us."

It is my opinion that the Omaha convention will go down in history as one of the most practical, helpful and instructive meetings ever held by the S. A. F. Nearly every one present seemed to be enthused, and all were free to impart to others the knowledge which they possessed on the subject of floriculture. There were a number present at the convention for the first time; especially is this true with regard to the florists of the west, some of whom were heard to remark: "This is not the last convention we will attend."

E. C. Newbury, of Mitchell, S. D., said to a little group of florists, that this was his first visit to our conventions, and that he had entertained no idea as to

LILY OF THE VALLEY SHOWER CLUSTER.

MEMBERS OF THE S. A. F. AND THEIR FRIENDS AT THE J. F. WILCOX ESTABLISHMENT, COUNCIL BLUFFS, IOWA.

what he had missed by being absent. He expressed regret that he had not earlier embraced his opportunity to be more directly connected with our organization by way of attendance upon the yearly gatherings.

The meeting to be held in Detroit next year, because the city is a most delightful one, centrally located and always cool in summer, cannot but be helpful in every respect to florists. By deciding now to attend this meeting in 1899, and shaping our plans and work to this end, there can be no reason why a great many florists cannot go who hitherto have been absent from the conventions and who have thus missed their opportunity for pleasure and profit. Some one has remarked: "The stay-at-home-florists are rarely ever up-to-date." The information to be had out of the side talks between the sessions can not be gotten in any other way.

The hospitality accorded us by the florists of Omaha and Council Bluffs was genuine, and will linger in our memory as long as life shall last. We do not see how the kindness shown us by J. F. Wilcox, whose bountiful hospitality gladdened every heart, will ever be forgotten. I think he found it "more blessed to give than to receive," by the enthusiastic and hearty manner in which he entertained the 265 florists. The bountiful repast which he served on his beautiful and spacious lawn was ample to satisfy the most epicurean in taste.

One year ago when it was voted to hold the next meeting in Omaha, many of the eastern florists remarked substantially: "The S. A. F. has received its death blow." There were some who expressed their sympathy for President-elect Gude saying: "It is unfortunate that the society should die in his hands." But how different from all this the outcome is. President Gude has carried us through one of the most successful conventions ever held by the society, for which painstaking effort he deserves both credit and complimentary mention.

It should be remembered by florists east and west that our society is national in its composition and influence, not sectional and limited. I hope to see the day when, as a society, we can meet successfully in California. Robert Craig voiced the feeling of many of his brother florists when he said: "I wish that our eastern people could come out here and see and study this marvellous country and get better acquainted with this noble people."

Kokomo, Ind. W. W. COLES.

Carnation Culture.

Mr. Herr states in a recent article that if carnations are grown indoors throughout the season and propagated from for a few years in succession they will run out and become worthless. If this is an opinion, simply, I am inclined to dispute it. If it is based on observations and trials sufficiently numerous and extended to make the statement certain, it would be interesting if Mr. Herr would give them fully, as such trials have, I believe, never been fully reported. X.

My statement quoted by "X" was made as an opinion and not as the result of observations and trials, as I have never had the opportunity to make them.

The opinion, however, is based on the fundamental law of the survival of the fittest, a law that we carnation men are too much inclined to ignore. The growing of carnations indoors during summer is anything but conducive to fitting them for propagation. In the first place, they are subjected to a degree of heat that is entirely opposite to their requirements; this can be easily verified right now by making a microscopic examination of the cellular and tissue matter of the plants that have been growing in the houses all summer and comparing them with the same variety grown outdoors.

The indoor grown carnation in the hands of a good and careful manager can, by the application of fertilizers, and the careful attention to watering and other necessary details, be brought up to a fine looking plant and made to produce excellent blooms. The outdoor plant in the hands of a careless grower can speedily lose all the points of advantage it may have gained by its open air culture and by the time the stock is wanted for propagation, say January 15, the careful grower of indoor stock may have the better stock from which to propagate.

Possibly I should have modified my statement and said that a new variety will, in the hands of the average carnation grower, run itself out in a few years. This is plainly evident to everyone who has kept his eyes open the past five years, and will be much more so if the average carnation grower gets to growing his stock indoors during the summer, for there can be no question but that this method has a weakening effect on the constitution of the plant and thus unfits it, in ordinary hands, for propagation.

There is no occasion for a good carnation to run itself out in a comparatively few years, as all of them are not doing—in fact the great majority of varieties seem to be pretty well run out when they leave the originator's hands. If we employ a little common sense in handling our parent stock a variety should not only last a long time but should improve in all good points.

It might be well to give this question some attention now, while we are engaged in planting the stock. To get the best plants for propagation they should remain in the field just as long as there is no actual danger of frost for they make a growth these cool nights that is ideal for their future health. By leaving them out in the field I do not mean your blooming stock, which should be housed

just as quickly as possible and should not be used for propagation.

As an illustration we will say you want 1000 rooted cuttings of Flora Hill for next season. To get them in the best possible shape select about fifty of the healthiest plants in the field and let them remain where they are until there is danger of frost, being careful not to disturb them in taking up the others. As frosts approach plant them in a good, sunny, well ventilated house used exclusively for stock intended for propagation. Great care should be used in planting them so that they receive the least possible check. After they are well started they should be grown along in a temperature ranging from 40° to 50°, with a possible 60° on bright days. Allow them to bloom but do not expect exhibition flowers and do not attempt to stimulate them into making such flowers; simply keep them in the best of natural health and then carefully note the blooms produced by each plant and if there are any among them that produce inferior flowers, temperature and other points taken into consideration, pull them out.

With this method of treatment you will have, by January 1, plants that afford a good lot of first-class cuttings and by February 1, a second lot will be ready, so that you can select each time five hundred cuttings which will give you clean and perfectly healthy stock.

Cuttings grown from such stock, with the same method of selection followed year after year, will result in the building up of a variety instead of its running down.

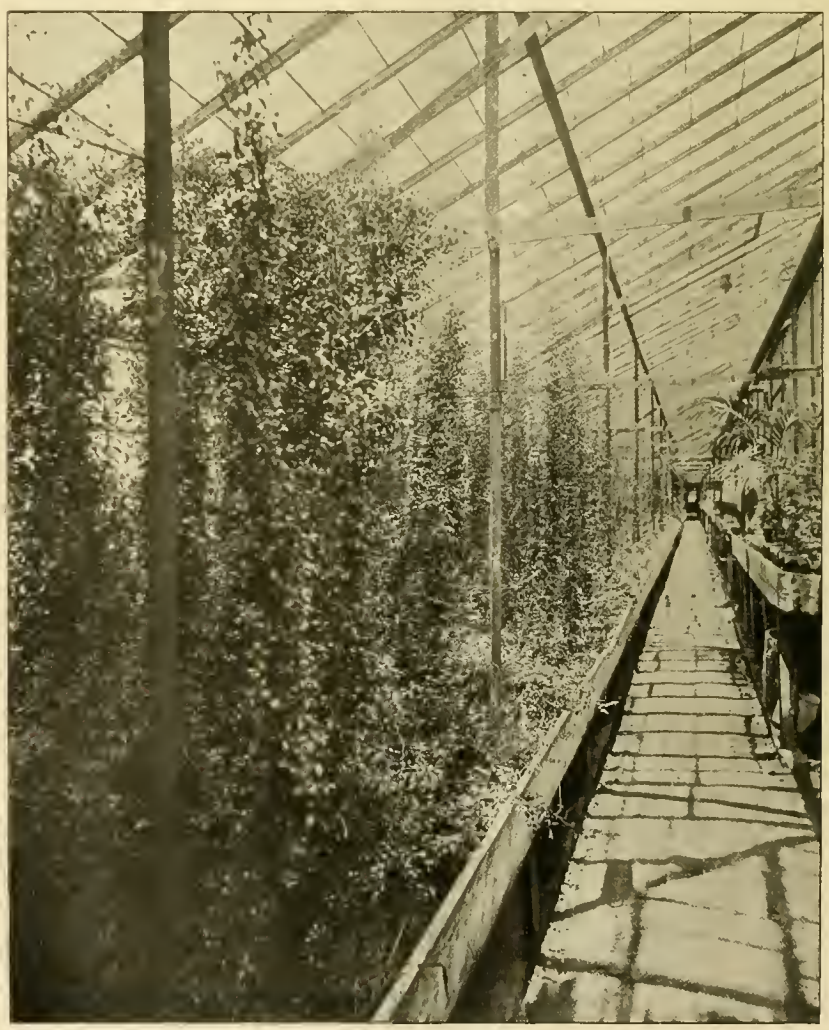
Growers who are not so situated as to give up a whole house to stock for propagation can obtain the same results by placing the stock plants in a house with some blooming variety which does not require a high temperature, and the little extra trouble and expense will be repaid a thousand fold, even to the smallest grower.

Cuttings from such stock can be stimulated and fed and warmed up to give us the large and perfect flowers we want for our trade and when we separate our plants we can give those which require it the extra feed and heat with a clear conscience as our stock plants are off taking care of themselves and we have only the flowers from the plants we are forcing to consider and run no risk of injuring our next season's stock.

I would like to have "X" give his views on the subject of cuttings from indoor grown stock; in fact we ought to have the frequent exchange of the ideas on many subjects of a host of carnation growers, as that is the only way we can become masters of our art.

ALBERT M. HERR.

Garden Notes.



I suppose that everyone is acquiring and propagating Begonia Gloire de Lorraine. The acquiring I find is much more difficult than the propagation, and those of us who have the young plants are apt to keep them in an unobtrusive corner for a season or so. It is safe to say that no begonia novelty has ever been distributed of so much merit, but I hear that it is found hard to propagate. We have had no trouble to root the cuttings, and even the leaves from the base of the stems will root freely, as we found from some that dropped on the sand in the propagating bench; but we find that to have good branching plants it is no use to take cuttings unless they are from the base of plants that have been cut back, the lower they are taken the better; tips of longer shoots grow on and up with a flower at each joint and never a side shoot. It will be found, also, that shallow pans are preferable to pots, as this plant is a surface rooting one, not requiring a deep medium for its roots. Shallow pans that can be suspended when the plants are in bloom will give the best results at all times.

We had heard that tuberous begonias could be wintered wherever a potato would keep, and as we wanted ours late in the summer to be the most useful, the whole of them were placed in a cellar with an earthen floor in the fall of last year, tops and all, and a covering of sand placed over the pots. The tops died off naturally, and we did not lose one per cent of the bulbs. They were brought up late in May and will be very useful in September when flowering plants are scarce. Our whole stock of gloxinias was stored in a similar way, every bulb perishing. Always tell of your failures.

The minute insect known to gardeners as the mite that attacks so many plants, but especially the cyclamen, gloxinia, achimenes and others, a species that Prof. Bailey tells me is new to science, had failed to give way to everything we knew of in the way of a remedy, including hydrocyanic gas, bisulphide of carbon and other deadly compounds. These often kill the plants and leave the mite uninjured. We are using now a vaporizing tobacco extract, and the cyclamens bid fair to be as good as in times gone by. Cyclamen growing was altogether too much of a processional affair; one might be in the front one year, but would be relegated to the rear the next, and all due to a microscopical insect that was to be found under the divisions of the calyx of an unopened bud, that crippled the flowers and caused them to develop mottled or variegated colors.

To those who have not tried the Chabaud strain of carnations for summer flowering we would advise a trial another year. They are an improved strain of the Marguerite, with the difference that about all are perfectly double, very fragrant, with yellows mixed in, and of very easy culture, flowering the summer long if sown early. When the Marguerite carnations ceased to be the product of one man's selection and became cheap, it also quickly became poor, but Chabaud seems to have gone on with the work and very much improved his strain. For cutting in the summer we find them invaluable, and at Newport, R. I., they are grown by the thousand for a like purpose.

Among hardy summer roses for beds there are none more reliable and valuable than the Souperts. Here in the east they have proved entirely hardy and flower almost all summer. The variety of color adds to their usefulness. The so-called hardy roses seem to be called hardy because they do not die outright the first year. They might be described in lists as "taking more than one year to die," and then the growers would not expect too much from them. We find that with

MENDENHALL'S SMILAX AND ASPARAGUS HOUSE, MINNEAPOLIS, MINN.

bugs and mildew in summer, and the frosts in winter, there is no more unsatisfactory class of plants among those which a gardener is expected to grow.

Of the recent additions to hardy plants, mention must be made again of Rudbeckia Golden Glow. It is of surpassing merit as a border plant for a back row where tall subjects are used. With us it grows fully eight feet high, and is in full bloom in July. The stems are smooth and not rough as in the sunflowers, and it is as double as could be wished, with much branched panicles of bloom. It will in time become as popular as the hydrangea and Clematis paniculata. E. O. ORPET.

A Minnesota Establishment.

Few florists have any idea of the extent to which the industry of floriculture has grown in those portions of the Union which are as yet comparatively new. Minnesota is a sparcely settled state yet it has beautiful and populous twin cities, St. Paul and Minneapolis, and in the latter is the establishment of Mendenhall, the florist Mendenhall has the largest place in the middle north. He has ten acres of land, over 110,000 feet of glass, 24,000 feet of steam pipe and 6,000 feet of hot water pipe. Last winter it took over 1000 tons of coal to keep Mendenhall and his plants at the proper temperature and thirty employes draw their pay every Saturday night. Thirteen of the houses are constructed of iron and the entire establishment is eminently up-to-date.

Mendenhall's place is at Eighteenth street and First avenue, South, and is but five minutes by electric car from the business center of the bustling northern metropolis, which is really one of the prettiest cities in the country.

The only stock grown in this establishment is that suited for home culture, bedding or cut flowers. Mendenhall does not believe in "plants by mail," but he never overlooks an opportunity to capture an order which may go by express over one of the dozens of railroads centering in Minneapolis. Orchids, roses and carnations are his especial pride but he also grows large quantities of asters, mignonette and sweet peas, and in their season lilies, hyacinths, tulips and bulb stock in general. Violets are as popular in the Twin Cities as they are in the effete east and it taxes Mendenhall's capacity to supply the demand. In decorative plants, palms and others which are prized for their foliage, Mendenhall has a complete collection and a retail trade which warrants such an investment. He has a seed department which enjoys prosperity and each branch of the establishment is in charge of a thoroughly capable man; Mendenhall himself has a watchful eye upon the whole.

Mendenhall, the florist, has another name, although few there are who ever heard it, and some times signs himself, "R. J. Mendenhall." We reproduce herewith photographs of his three-hundred-foot smilax and asparagus house and his house of specimen palms.

WATSEKA, ILL.—At the annual September fair there will be a class offering ten premiums for the best displays of greenhouse products.

COLUMBUS, O.—Affleck Bros. have added the five houses of the G. W. Campbell estate at Delaware to their new establishment here. The Campbell homestead is to be used as an art hall by the Ohio Wesleyan University.

New York.

BUSINESS FALLS OFF AGAIN WITH HOT WEATHER.—TOURISTS RETURNED.—STOCK OF POOR QUALITY GENERALLY.—CATTLEYAS AND LILY OF THE VALLEY IN DEMAND.—ASTERS IMPROVING.—COMING CLUB MEETING.—AMERICAN INSTITUTE FAIR.—BRIEF LOCAL NOTES.

Business, which seemed to revive under the spiriting effects of cool, bracing weather, has again, with the advent of high temperature and humidity, dropped down to the vanishing point and there is little for either wholesalers or growers to do under the circumstances but to sit down and ply the fan. About all those who have been rusticating have returned, well browned and hearty, ready for work when it comes their way. Visits to the growers are now in order; there is stock to examine, prospects for winter to be discussed and it is now, in the natural course of events, the proper time for a general handshaking with the growers. The bigger the grower, the bigger the handshake, especially if his stock has a wide reputation for quality.

The stock coming in now will not, however, make a great reputation for anybody, and the demand, which has been active during the past few days on account of the Tiffany funeral and other similar events has not been easily filled with the kind of stock on hand which, with the exception of cattleyas and lily of the valley, is very different from the kind of stock wanted. Perhaps it is safe to say that good carnations sell as well as any flower in the market, and better than most things. Asters are improving—that is, the fine large Semple varieties are now coming in, and they sell for three or four times the price obtainable for the small common stuff that the market has been overloaded with.

Indications point to a very enjoyable evening at the opening session of the Florists' Club Monday evening, August 12. The evening will be social in character, and a general interchange of views regarding the winter campaign will be in order. There should be a large attendance.

The sixty-seventh fair of the American Institute will open at the Academy of Design on Monday, September 26. During the first week the special features of the horticultural exhibit will be dahlias, gladioli, stove and greenhouse plants, bouquets and miscellaneous cut flowers. List of premiums may be had by applying to Mr. J. W. Withers.

Mrs. Wm. Plumb has been seriously ill for some time but is now improving. A married daughter with two children, who now lives in Chicago, has been visiting at Mr. Plumb's.

Roberts & Grunewald have secured the adjoining store to that occupied by them at 247 Columbus avenue, and the improvements when completed will give them double their former store room.

Mr. F. H. P. Imbert is about to sail for a brief visit to Europe.

Wm. Elliott & Sons will start their series of fall plant auctions on September 13 with a big line of palms, violets, carnations and bulbous stock.

In town: P. J. Berckmans, Augusta, Ga.; Albert E. Cocquerel, representing E. Cocquerel, the well-known wreath manufacturer of London, is at the Astor house this week with a line of samples.

MENDENHALL'S PALM HOUSE, MINNEAPOLIS, MINN.

Philadelphia.

STOCK IS IMPROVING SLIGHTLY.—SUMMER MATTERS.—MORE CARNATION HOUSES.—VIOLETS PLANTS ARE SMALL BUT HEALTHY.—JOTTINGS.

The summer atmosphere continues to predominate, still we will not complain after reading about that 102° at Omaha.

Stock is improving slightly and Beauties with stems from twenty-four to thirty inches long may now be had at the moderate prices of $1.25 to $1.50 per dozen. However. orders for more than two or three dozen could not be filled by any one grower. Of the shorter stock there is an abundance at $4 to $6 per hundred. Kaiserin is still the finest white and the new crop of Maids, now beginning to come in, are the best pink. Semple asters are plentiful; the finest appear to be worth more than $1, but as that is the asking price either the demand must be very light or else the market is overstocked. It is a question whether it pays to have anything choice in quantity during the summer months in this market, there is such a suspension of social affairs. We fancy a slight improvement has taken place the past summer or two and it is possible that eventually the magnificient suburban residence districts within ten miles of the city, that are being rapidly built up, may catch the people and holds them within our reach.

George Watson, the seedsman, says the large sizes of Bermuda lilies are all sold out and that in most cases the limited stock had to be divided out pro rata as none of the trade received their full orders from the growers. Smaller sizes are still to be had.

Peyton DeWitt, at his Croyden establishment, is adding two structures 20x100 and 10x100, to help house his increased stock of carnations. A new windmill and a 10,000 gallon water tank is also going up.

Rodman Eisenhart, of Holmesburg, has moved into his new dwelling. It is a fine twelve-roomed mansion built in the colonial style. Mr. Eisenhart grows violets exclusively. He says the plants this season are not quite so large as last year's at this time, but are in good health, which is more to be desired than size.

Joseph Schuler, an engineer at the Dreer nurseries, Riverton, met with a painful accident, a piece of metal from a casting he was chiseling striking him in the eye. The injury was so severe the eye had to be removed.

Wm. Thompson, of Thirteenth street, below Walnut, has been quite ill with pneumonia the past month, but is now able to be about.

Robert Stewart, Thirteenth street above Walnut, opened again on the first of the month. For the past few years he has shut up shop during the month of August and says he saves money by the operation.

K.

Boston.

MANY FLOWERS USED ON ACCOUNT OF SOLDIERS' FUNERALS.—MARKET CONDITIONS.—HANDSOME FLOWERING SHRUBS AT THE ARNOLD ARBORETUM.—A BUSH IN A COOP.—DISPLAYS AT HORTICULTURAL HALL.—FORESTRY VISITORS.

Dirges and muffled drums have been familiar sounds on Boston's streets during the past few days. Intensely impressive are these last sad tributes to our dead heroes, but special reference to them in these notes would scarcely be called for were it not for their direct effect and influence on the demand for flowers. Floral tokens have been provided with lavish hands by individuals, organizations and public institutions and the sum total of the expenditures in this direction must reach an enormous aggregate. It has been a boon to the flower growers and the flower workers and it is safe to say that the florists of Boston have seldom been called upon to work under circumstances when their heart was so close to their hands or the impulse so strong to do their very best for every comer.

The quality of roses in the market is by no means high but the flowers, although undersized, are, as a rule, clean and bright and they have been well used up. Carnations are scarce, but there are plenty of white asters and white Japan lilies are just in their prime, making in connection with fine adiantums and asparagus, a rich effect in funeral design work. For really choice work lily of the valley and stephanotis are about the only material offered.

One of the most beautiful shrubs in the Arnold Arboretum at present is Hydrangea paniculata. This is the original species, from which came the well known H. paniculata grandiflora, which it greatly excels in grace. Every lawn should have a specimen; the late flowering form is the best. Very pretty for low shrubbery borders is Lespedezia sericea, a Japanese species, which blooms profusely through the late summer and fall. Its airy branches, loaded with little, white, violet veined flowers, give the effect of ericas at a short distance. Nothing can be found in the whole list of shrubs now flowering handsomer than Clematis Davidiana. Its clusters of bright porcelain blue flowers in appearance and fragrance might easily pass for single hyacinths. Myricaria Germanica is much admired for its soft, airy effect among the heavier foliaged plants. The foliage closely resembles that of the tamarix but is a decided glaucous blue in color.

A plant in a cage causes much curious comment among visitors to the Arboretum. It is the true Actinidia polygama and is the only survivor of a large number, all the rest having been destroyed by cats, for which this species possesses a powerful attraction, and Mr. Dawson has found it necessary to build a substantial coop of chicken wire around and over it to save its life. He states that the plant which has been distributed as Actinidia polygama is A. arguta. Mr. Dawson's hybrid roses grow in interest as the new ones come into flower for the first time. One that bloomed this season, a cross of setigera on Wichuraiana, has the flowers of the former on the habit and foliage of the latter. Gordonia altamaha is full of buds and its magnificent camellia-like flowers will make a grand show in about two weeks.

Although no exhibition was scheduled for Saturday, August 27, there were a number of interesting collections shown in Horticultural Hall. J. Warren Clark had some handsome seedling gladioli, for one of which, a pale yellow with good form and spike, named Yellow Bird, he received honorable mention. The Mycological Society turned out in full force and made a big display of edible, doubtful and poisonous fungi. The interest displayed in the special field of this society is astonishing. The membership is said to have already reached five hundred.

The meetings of the American Forestry Association in connection with the visit of the society for the advancement of science last week, were held in Horticultural Hall, President Appleton of the Massachusetts Horticultural Society presiding. An opportunity was given the visitors to see Boston's enterprise in the matter of park and boulevard improvement. The procession of barges and tally-hos that made a tour of a portion of the park system on Thursday was a big one and it took a long route, but it might have been repeated every day for a week over new territory, before all the attractive features of mountain and plain, forest and seaside, included in the fourteen thousand acres of Metropolitan reservations had been fully seen.

The news of the death, in Germany, of David Nevins is sad news for the frequenters of Horticultural Hall, who have recognized with high appreciation his love for horticulture and his services in its cause. The many contributions from his greenhouses to the exhibitions in which he took as much pride as did the gardener who produced them, his princely hospitality on many occasions to delegations of the craft who visited his beautiful estate at Framingham and his ever-ready hearty greeting and hand shake are fresh in our memory and he will be sadly missed.

Welch Bros., are receiving American Beauties of superb quality for the season and a quick outlet is found for them at the fashionable seaside resorts.

James Delay & Son have discontinued their large store on Boylston street and relocated at their old stand, 220 Boylston street.

Visitors in town: Prof. Beal, Lansing, Mich.; Prof. J. F. Cowell, Buffalo, N. Y.; E. O. Orpet, Lancaster; J. Fuller, Leominster, Mass.; D. Fuerstenberg, Philadelphia, Pa.

John Gormley & Son have acquired more room and are enlarging their store on Tremont street.

Cincinnati.

Business has been slow the past week, but the outlook for the coming week is very encouraging, as several of our leading theaters will open, and with the G. A. R. encampment in our city no doubt every available flower will be sold.

On September 8 the business houses will give an industrial parade in honor of the G. A. R. A float on an immense scale will be put up for the occasion by the Cincinnati florists. Will Murphy, one of Col. Roosevelt's Rough Riders, will handle the ponies and no doubt will have his hands full (I mean of ribbons). The wagon will weigh four tons.

Prices on roses remain about the same. Carnations have never been better at this time of the year and meet with a steady sale. Messrs. Will and C. C. Murphy are sending in some good blooms.

George & Allan, of Hyde Park, are sending in the best Semple asters of the season. Smilax has been very scarce of late, in fact there are none to be had.

The greenhouse plant of Critchell's Sons is progressing very nicely and the ten houses under way will be completed the latter part of September.

Edward Hoffmeister and sister have returned from the Great Lakes, where they have been spending a couple of weeks.

Mrs. Gustave Adrian, of Clifton, will leave for Niagara Falls and other eastern points the coming week.

It is rumored that Frank Ball, of the Cincinnati Cut Flower Company, is to be married in the near future to a charming young lady, who is connected with a leading flower store on Fourth street. Congratulations are in order.

H. SCHWARZ.

THE AMERICAN FLORIST

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Wednesday to secure insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

A PATENT has been taken out on a hot-bed sash frame, the iron frame of which is fitted into a wooden frame.

THE International Horticultural Exposition in St. Petersburg in 1899 will take place from May 5 to May 15, under the protectorate of the emperor. The exposition will be held in the palace of the imperial Taurus garden, 35,000 roubles having been granted for repairs.

PROF. J. L. BUDD states that wood alcohol is fully as effective as grain alcohol in the preparation of liquid grafting wax and at one-third the cost. Wood alcohol is poisonous to animal life, but its sale is not surrounded with the legal restrictions imposed by many states upon traffic in the grain product.

DESPITE the wide publicity which has been given the operations of the palm swindler his business continues to thrive. Within the past few days he has confidenced florists through Iowa from Clinton to Cedar Rapids. At the former place he secured from Andrew Bather a dozen plants the smallest of which was worth $2.50.

THE Morris County Gardeners' and Florists' Society has promulgated its rules and premium list for its third annual exhibition to be held at Morristown, N. J., November 1 and 2. There are five classes for chrysanthemums, four for roses, two for carnations, three for violets, five for groups of plants, two for amateurs and seven for vegetables and fruits. Cups and liberal cash prizes are offered in each. C. H. Atkins, of Madison, N. J., is secretary.

Catalogues Received.

Coldwater, Mich.—T. V. Canrite, house 20x90.

Notes and Comments.

Mr. Grove P. Rawson has taken occasion to record exceptions in your contemporary to the comments recently made in your columns by the undersigned about watering. There is no practical reason for his action, apparently, to the working florist, for he has certainly not disproven what I have taken great pleasure in stating upon this, one of the most important details in plant growing, whether it be indoors or out, and whether the advice as to the time of day water should be given to plants be for the benefit of the amateur or florist.

Sound advice upon any given subject, whether horticultural, floricultural or anything else, is at all times best, whether the products thereby produced be for pleasure or profit. I was pained at the tone assumed by Mr. Rawson. He could not have caused himself to appear more antagonistic had he himself given the objectionable information to the daily paper adversely commented upon.

This theory of always watering at night in summer-time is an antiquated notion, handed down to us, possibly, by some one of the old writers among our European forefathers, which has long since been exploded in this and other countries, but still remains current through writers of the characteristics possessed by Mr. Rawson.

One would naturally expect something more substantial from Mr. Rawson after reading his autobiography recently published, had not his picture appeared at the same time, for in that he looks like anything but a person who could instruct in the practical details of gardening obtained from personal experience. Appearances in photographs—grotesque though they sometimes are—may not always convey a correct idea as to the real capabilities of the original; however, the picture referred to must have met with his approval or it would not have appeared where it did.

To return to what Mr. Rawson had to say anent watering, to the effect that "To water plants in a shallow vase at mid-day in the broiling sun will frequently scald tender plants and vines," and he adds, "this is no unusual experience." To me this is so unusual that it had never happened either under my care or observation in not less than 30 to 40 years' experience. I do not advocate using a shallow vase in which to grow plants in summer-time, but I do advise watering a vase—deep or shallow—more especially the latter, at mid-day if the soil is dry, rather than postpone until evening the application of that welcome element—water—to plant life, especially when the weather is hot and dry.

I find some difficulty in restraining my impatience in referring to another statement made by our friend from Elmira, which is to the effect that "nature has sense enough to so equalize atmospheric conditions as not to parboil vegetation." No sane body will dispute nature's wisdom, but what are we to infer from what our objector has said? I take his meaning to imply that if watering is done under the broiling hot sun that the vegetation to which the water is applied would be parboiled. Nothing could be farther from the truth, and if Mr. Rawson will be prevailed upon to come into closer touch with nature and practical floriculture, such statements would never more be made. To parboil vegetation the water to be applied to either the foliage or the roots would have to be at least 212° and the soil in which they were existing would have to be at a temperature no lower, or very little lower, than the boiling point. The absurdity of such statements appeals to everyone, whether practical, theoretical or solely cynical.

It has been my pleasure, as it has been my duty, to water at all hours of the day, especially in summer, and if I must confess, have frequently watered after dark, and, with the judgment that I have at command, without the slightest ill effects, apparently, to the vegetation operated upon, but, on the contrary, it flourished like every practical gardener, florist or amateur would expect it to under intelligent administration. Most practical florists do their watering in the morning, both summer and winter, and in summer time look over it again about noon. I have watered carnations all day long; also cannas, crotons and every other plant under cultivation at intervals during the day. Only a short time ago, when the recent heated term was at its worst, I experienced a great deal of satisfaction in watering some croton beds I have here all one afternoon with the broiling hot sun pouring down upon us with its fierce pitiless rays, so to speak; both foliage and root were abundantly supplied, and it is with pardonable pride that I point to these tropical products of nature, feeling that had I not given them water when I did the plants would have seriously suffered and would not now be objects of gratification. It is not wrong to sprinkle young rose plants, even, with water in the early afternoon after a cloudy spell in summer time, when the sun is shining; at least I have not found it so, and the

oftener it is given during a bright hot day the more the plants enjoy it and are improved largely in consequence.

Mr. Rawson's stand is wrong no matter from what point of view it is taken, and he has made a serious error in being drawn into the position he now occupies.

E. L.

Chicago.

A BUSY WEEK IN CERTAIN LINES OF CUT FLOWER ACTIVITY.—WHITE BLOOMS FOR DEAD SOLDIERS.—SHIPPING TRADE.—STOCK CONDITIONS.—A CASE OF BANKRUPTCY.—NOTES AND COMMENTS.

The week has seen no appreciable increase in the quality or quantity of flowers, but has been remarkable for the demand for white stock both at home and abroad occasioned by the funerals of members of the volunteer army who have returned to their own country only in time to die.

The hot weather has had its usual effect upon all lines of stock and first-class flowers are hard to find. Beauties are now quite plentiful and have excellent stems, but many of them are more or less faded by the hot sun. However, they fetch $3 per dozen. Carnations, except the white and pink varieties, are in over supply. Portia seems to be a prolific bloomer these days, at least all the commission men have more or less of this variety which can not be disposed of except at a sacrifice. The aster and sweet pea crops are considerably diminished.

L. C. Washburn, of Bassett & Washburn expresses the general situation when he says that business has been so good along certain lines that in the past few days it has been difficult to secure sufficient stock to meet the demand. The blooms are not coming along as fast as is desired, but, with cool weather, conditions will undergo a very considerable change.

Mr. Washburn comes in from Hinsdale every morning upon the same train which brings the cut from his establishment. He is his own bookkeeper and cashier during Mrs. Horton's vacation, and before the cars fairly stop beneath the big train shed at the Union station he swings off and makes a dash for his place of business. Once arrived there, off goes coat and vest and he at once "gets busy." Mr. Washburn says he is now paying for the fun he had out west last month.

E. C. Amling states that his summer's business has exceeded his expectations and that he anticipates an excellent fall trade. His experience is probably that of many other houses in the commission trade.

E. H. Hunt has enjoyed an excellent shipping trade this week. "The Old Reliable" is not to be outdone by any of the younger fellows.

J. C. Silliman, 118 Ogden avenue, is the first Chicago florist to place himself within the folds of the new bankruptcy law. On Wednesday he, through his attorney, Fred. S. Baker, Room 702, 84 La Salle street, petitioned the Superior Court to declare him a bankrupt. His schedule shows indebtedness of about $2185 and his assets, above his exemptions, are less than $100. The failure catches a great many of the wholesale and commission men but few of them are involved for more than a few dollars. On Thursday the store was opened under Mrs. Silliman's name pending an adjustment of affairs.

C. P. Hughes, of the Illinois Cut Flower Company, has returned from a two weeks' outing at Hillsdale and Adrian, Mich

Swain Nelson, the venerable head of the firm of Nelson & Son, has presented the Chicago Historical Society with the original plan of Lincoln Park, made by him in 1865, when the tract was but sixty acres.

George Walther has trebled the capacity of his greenhouses at the corner of Sixty-third street and Eggleston avenue.

The Guardian Angel Orphan Asylum is building three greenhouses, each 23x140.

Visitors in town: Mr. and Mrs. W. H. Elliott and son and Mr. and Mrs. Harry Siebrecht, returning from their western trip; M. Rice, en route from Omaha to Philadelphia; J. M. Cole and wife, Peoria; W. Ellison, St. Louis; C. Boetscher, Canal Dover, O.; Herbert Heller, of the South Park Floral Co., New Castle, Ind.

Milwaukee.

Milwaukee street is to be strengthened as a flower center by the addition of another retail establishment, at the corner of Mason street. The name to be on the sign has not yet been made known, but the promoter is well acquainted with affairs in the locality and will have a name ready in due time.

Binzel & Kellner have been notified that their new store will be complete by October 1, and they are now making preparations for a fine display.

The Whitnall Floral Company has disposed of its good will and fixtures to Alexander Klokner, who will conduct the business at its present location without interruption. The unfinished business of the corporation will be completed without delay, after which it will be dissolved.

C. B. W.

NEW CASTLE, IND.—The South Park Floral Co. report their stock looking fine and that prospects for farm crops in their section were never better. They have increased their plant by two carnation houses each 20x120 feet and one violet house 12x120 feet.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

Every paid subscriber to the AMERICAN FLORIST for the year 1898 is entitled to a five-line want adv. free to be used at any time during the year.

The Seed Trade.

AMERICAN SEED TRADE ASSOCIATION.

EVERETT B. CLARK, Pres.; JOS. A. BOLGIANO, 1st Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

CONNECTICUT growers report serious damage to the onion seed crop, half of it being burned up.

VISITED CHICAGO: S. B. Dicks, representing Cooper, Tabor & Co., London; S. Y. Haines; C. G. Weeber, of Weeber & Don, New York.

SAN FRANCISCO, CAL.—The Sunset Seed and Plant Co. is reported to have assigned August 24 and to have offered thirty cents on the dollar in settlement.

AT Atlanta, Ga., the Alexander Drug and Seed Co., has divided its business and the seed department will now be known as the Alexander Seed Co., with Dan P. Durban as manager.

AT Philadelphia, in the construction of W. Atlee Burpee & Co.'s new warehouse, a terrible accident occurred through the falling of a cornice which resulted in the death of four workmen.

Everett B. Clark.

The president of the American Seed Trade Association is a native of Orange, Conn., and is a typical New Englander. He took up the growing of seeds upon his return from the campaigns of the Civil war and has ever since been identified with the trade. He is president of the

EVERETT B. CLARK

recently organized Everett B. Clark Company, of Milford, Conn. Fred. M. Clark is secretary, and Herbert A. Clark is treasurer. The firm has something over 100 acres in cultivation, growing those staple vegetables which are in demand in New England. Sweet corn is one of Mr. Clark's specialties. What he terms his "money crops" are turnip and onion seed. This year he has nearly fifty acres devoted to these two vegetables. It is Mr. Clark's constant endeavor to keep abreast of modern methods of seed growing and to place upon the market nothing but stock of the highest quality. As a result of years of painstaking endeavor along this line he finds himself with an established reputation and a prosperous, constantly increasing business.

Mr. Clark has been identified with the American Seed Trade Association from the day of its inception. He has been a regular attendant at its annual conventions and has been a tireless worker for the advancement of the aims of the organization. His elevation to the presidency, which occurred at the sixteenth annual meeting, at Old Point Comfort, Va., in June, is but well merited recognition of his services. He is a man of sound judgment and under his guidance the association will hold a straight course in the line of its greatest usefulness.

Nebraska Crop Report.

Since last report, the condition of the crops has changed materially. Sweet corns are in fully as bad shape as before. We will not have over 70 per cent of an average crop.

Muskmelons will make about half a crop; water melons very little if any better. Late plantings of cucumbers will make about 40 per cent of a crop. The earlier plantings will make a little more but the best crops will not yield over 75 per cent of what we ordinarily receive.

Some kinds of winter squash will give a fair yield; somewhat less than the average but sufficient to make a good showing. Other kinds will be light; fruit is not setting, and what did set earlier is dropping off. This is especially true of all the larger varieties of both squash and pumpkin of foreign origin.

Until Saturday, August 20, everything indicated a good average crop, with some things above an average. Saturday, Sunday and Monday were the warmest days we have had in years. This, with the dry condition of the soil, has fairly cooked both vines and fruit. Most of the crops are beyond recovery and fruits are ripening prematurely. There have been no hot winds, but the sun heat was too much even for melons.

BANGOR, ME.—Mr. and Mrs. Carl Beers have returned from their European trip. Their pleasure was terminated by the announcement of the death of Mr. Beers' father.

KALAMAZOO, MICH.—The florists of this city have filed complaint with the attorney general that the incorporated cemetery association here is competing with them contrary to the statute under which it was organized in that it seeks not only to furnish graves but flowers to cover them.

PEORIA, ILL.—A well dressed man attempted to work the palm swindle on J. C. Murray on August 25, but he had not the smoothness of the original confidecer for he failed to meet the delivery boy at the proper moment and at the house to which he had ordered the goods sent all knowledge of the affair was disclaimed. The driver took the stock back to the store and Mr. Murray is $50 ahead on the transaction.

ROCKLAND, ME.—This city has seen a new idea for a sweet pea show carried to a successful conclusion. Last spring the *Courier-Gazette* offered a prize to the lady who should make the finest showing with this flower, and thirteen amateurs asked to have their displays inspected by the judge, Mrs. A. C. Mather, the well-known florist, who awarded the honor to Mrs. E. B. Hastings. Mrs. Hastings had trellises 115 feet long, with vines seven feet high.

THE NURSERY TRADE.

AM. ASSOCIATION OF NURSERYMEN.
A. L. BROOKE, Pres.; E. ALBERTSON Vice-Pres.; GEORGE C. SEAGER, Rochester, N. Y., Sec'y.

HENRY AUGUSTINE, the Bloomington nurserymen, states that the apple crop of Illinois, is almost a total failure, due to cold while the trees were in bloom.

New York's New Scale Legislation.

Charles A. Wieting, Commissioner of Agriculture for the State of New York, has appointed inspectors under the new law intended to check the spread of San Jose scale and enemies of fruit and other trees. The men selected are: Harris P. Gould, of Ithaca; George Gray Atwood, of Geneva; H. C. Peck, of Brighton, and Charles Young, of Ellenville. These inspectors were selected under civil service rules and will be employed for six months in the year at $100 per month. It will be their duty to visit all nurseries and orchards for the purpose of carrying into effect the provisions of the recent legislation which authorizes the officials to either prescribe treatment for or destroy any trees, shrubs, fruit or nursery stock found to be infested with San Jose scale or any other pest.

The law makes provision for the issue of certificates of inspection to all shippers and prescribes penalties for those who shall sell, ship, transport or deliver any goods commonly known as nursery stock without having attached thereto a copy of such certificate.

While the law will inconvenience nurserymen F. S. Sirrine, the expert in charge of the State Experiment Station of New York, does not think that it will be effective in preventing the spread of the San Jose scale, because that insect is on fruit trees in many private grounds, and is not confined to the nurseries by any means. He does not look for satisfactory results from the attempt to execute the law.

Phlox Decussata Varieties.

Since writing the last notes on the new varieties of Phlox decussata the following have come into bloom.

Derviche—Good; fairly dense spike; flowers of good size and shape; lavender shaded blue, with dark eye; one of the most distinct of the set.

Eterle—Catalogued as similar to Phlox Drummondi; rounded spikes; flowers poorly shaped; dark pink, with indistinct light center.

Fiancee—Spikes very large and compact; flowers large, pure white; the best white variety in the set.

Girondin—Rounded spike; flowers medium size; dark pink; very similar to many others.

Le Mahdi—Spikes much branched; flowers of good size and shape; dark bluish purple; a distinct variety.

Meteore—Pyramidal spikes; flowers of good size and shape; clear rose, with lighter center; not distinct enough from Le Solioel.

Albatre—Dwarf; spikes much branched; flowers of good size and shape; pure white; the best of the dwarf white varieties.

Candeur—Dwarf; pyramidal spike; flowers medium in size; pure white; not so good as Albatre.

Thebaude—Dwarf; spikes branched; flowers of good size and shape; light pink, shaded; dark pink eye.

Amphitryon—Pyramidal spikes; flowers large, well formed, white marbled and feathered with purple.

Astier-Rehee—Spikes rather loose; branched; flowers large, purple, with lighter center and edges.

Wm. Ramsay—Dense, rounded spikes; flowers fairly large, of good shape; dark maroon, with darker eye; very distinct.

Fantome—Dwarf; spike branched; flowers large, purple shading to lavender, purple eye.

Guignol—Dwarf; spike branched; flowers of fair size; lavender shading to white; similar to Fantasie but not bright enough.

Torpilleur—Dwarf; dense rounded spikes; flowers fairly large, well formed; bright pink; not distinct enough from other varieties.

In the phloxes we had from Scotland the flowers are small and the colors common. The most distinct one is Lucy Baltett, spikes rather loose, well branched, flowers rather small, purple tinged blue with silvery white edge; not very bright. Of the older varieties Cross of Honor stands out distinct, with long pyramidal spikes; flowers rather small but well formed; each petal shows a well defined lavender center edged with white.

Out of some seedlings we have had on trial for several years we have propagated two as being distinct: Norwood, a seedling of Eclaire and much brighter than that variety; spike branched, flowers large, well formed; dark clear pink, and R. P. Struthers, rounded spikes, flowers of good size, well formed, bright salmon pink, with well defined dark eye.

Massachusetts. R. N.

NEWBURGH, N. Y.—The property of Robert Brown, who formerly conducted a floral establishment here, has been seized by the sheriff to satisfy judgment creditors.

YORK, NEB.—A new fakir is abroad. He sold numbers of people rose bushes and other shrubs and set them out before collecting his money. After he had left it was discovered that instead of choice roses he had set out weed roots.

Fabiana Imbricata.

Known since the end of the last century and coming from Sonth America, Fabiana imbricata is the only one of fifteen varieties which has received consideration as a pot plant. As a small plant F. imbricata has great resemblance to an erica, while shrubs from four to five yards high, as they are sometimes met with in south European gardens can hardly be distinguished from a tamarix.

This botanically remarkable plant is a member of the solanaceæ, and stands between the genus nicotiana and petunia, containing sharp (acid or pnugent) substances for which it is used in its home, Chile, for malignant diseases of domestic animals. Its tubular flowers are pure white, with a little green tint on the bottom of the throat. Its main flowering period is from the end of March lasting through May. The blooming period, however, is easily changed according to the temperature of the house.

The main point in its culture is the constant raising of young plants, these being the handsomest and most constant bloomers. Plants older than three years are worthless. The plants want to be kept wet with occasional manuring during the growing period; full exposure to the sun in summer, a light house in the winter. They should be planted out during the summer months and repotted in September. Leaf mold or heath earth, or a mixture of both, is the required soil.

Spring struck cuttings give nice bushy plants the following year, which are covered with flowers, especially if pinched several times when the plants are young. A Berlin florist grows these by the thousand and has made money out of this "white erica," as people call his Fabiana. It is excellent for pot culture and cutting and can be trained to standard forms.—*Die Gartenwell.*

Pittsburg.

LUDWIG RETURNS FROM OMAHA.—BOTANICAL SOCIETY ENLISTS THE AID OF FLORISTS.—JOTTINGS.

Gustave Ludwig has returned from the S. A. F. convention, and reports that they had a good time, were well entertained and that the meeting was a success, but that only a comparative few were there from the east. He returned alone, his wife and family going to Gordon, Neb., about 400 miles from Omaha, to visit her sister living there.

T. P. Langhans has been east on business for the Pittsburg Cut Flower Company, and now they are busy arranging the storeroom for the opening.

James Semple of Bellevue, has joined the Botanical Society of Western Pennsylvania and with M. T. Shafer, of the society, will visit about five adjoining counties for the purpose of securing specimens of the flora of this section for the collection which the society is gathering. In all probability at least three of our florists will accompany them.

Julius W. Ludwig and wife have returned from Atlantic City and report having enjoyed a splendid time.

Mr. Flemm, of Breitenstein & Flemm, has the sympathy of the florists here, his father having died after an illness of about a week. He lived at Freeport, Pa., and was buried at that place. REGIA.

MT. JOY, PA.—Misses M. E. and R. Hoffer have enjoyed such a rapidly increasing business as to necessitate more commodious quarters. John S. Hamaker has secured the contract to enlarge their greenhouses.

Helpful Reminders.

A very common mistake is for growers to make an effort to provide room for winter forcing stock to the detriment of other things. A well balanced plant is as essential as a well balanced stock, but very few growers have a cool house for oleanders, agaves, azaleas, hybrid roses in pots, hydrangeas, deutzias and other plants that are best cool for a great portion of the winter. Such a house is useful, as it makes the proper care of such stock more simple and does for keeping plants of chrysanthemums, stevias and others out of bloom. A good cold house is indispensable to a well managed concern and this is the time to remind you of it.

Callas that have been dried and rested should be potted now; it is best to separate the several sizes into groups and give each one a pot proportionate to the size of the bulb. They are the better for remaining outside until well rooted. Callas want a rich and porous soil. If the soil shrinks from the pot and forms a hard ball when allowed to dry the roots will be damaged, for when the soil contracts upon them they are helpless; they become weakened and decay will occur; the trouble does not show itself above the ground, but apparently healthy plants will fall over and you will find that the roots and stem are slimey and have no substance. Quite a number of growers have become alarmed and want to know "how to fight the disease." Don't fight; give your callas judicious treatment.

Clematis paniculata is now blooming, and do not forget to save the seed.

This is a good time to sow poppy seed in places where you wish them to become naturalized.

Have your warm house in readiness for fire now, and get poinsettias in place at once, as nothing is gained by having them out longer and considerable is risked.

C. B. W.

Montreal.

GARDENERS' AND FLORISTS' CLUB GIVES ANOTHER OF ITS VERY SUCCESSFUL MONTHLY SHOWS. — MANY PREMIUMS AWARDED. — AUGUSTE PINOTEAU HONORED.

The August flower show of the Gardeners' and Florists' Club was well attended and the exhibits were unusually numerous and attractive. Pansies, asters, dahlias and begonias were the principal attractions, although some very fine miscellaneous collections of plants and cut flowers won premiums. There were thirty-eight classes, and in thirteen of them C. A. Smith, gardener to T. A. Dawes, won first place; he also won six seconds. George Trussell, gardener to Mrs. J. H. R. Molson, won seven firsts and seven seconds. Fred Bennett, gardener to R. MacKay, won seven firsts and two seconds. J. Stenning, gardener to W. Yuile, secured three firsts, as did J. Pidduck and W. Horobin. T. Martell, the florist, won two firsts and J. Eddy received one. There were a number of other exhibitors who won minor premiums and who received favorable mention.

Auguste Pinoteau, the head of the city's floricultural forces, has been honored by the Republic of France which has created him a Chevalier of the Ordre du Merite Agricole, as a reward for his success as an horticulturist. The decoration was bestowed upon the recommendation of the French Minister of Agriculture, and this is the first time that a Frenchman resident in Canada has been so honored.

DANA R. HERRON, - Olean, N. Y.

Los Angeles, Cal.

The past few days have been unusually warm and the hot dry winds have seriously injured the flowers as there is no stock growing inside except ferns. The demand for cut flowers continues fairly good. All the growers are preparing plenty of stock for the coming season and as but little planting and improving has been done for three years there should be a very heavy demand for all nursery and ornamental plants.

The talk of the florists of this community is the resignation of J. G. Morley as manager of the Redondo Beach Floral Company and his departure for the Klondike. Some ten months ago John Ackland, an employe of that company, went to Alaska and has succeeded so admirably that he wrote Morley to come at once. Mr. Ackland has secured good gold claims and expects to sell $8,000 of vegetables from his garden this year, onions selling at $1 each and radishes $1 per dozen. We understand at least one other florist profits largely by Ackland's success. Mr. Morley started north on the steamer Santa Rosa on August 11. He is succeeded as manager of the Redondo company by John Schloss, who, for several years, has been a landscape gardener and jobber in this city.

The horticultural commissioners, with the co-operation of the orange growers, propose to endeavor to send George Compere, a "bug expert" to the Sandwich Islands in search of the insects which prey upon the different kinds of scale and mealy bug.

E. Fleur, proprietor of the Oak Grove Nurseries at Alhambra, has completed the pipe line from his well in South Pasadena to the nurseries and now has an abundance of water.

Alfred Roedder has recently returned from a vacation. He visited the northern part of the state and spent a week fishing on Catalina Island.

Jas. Crookshank, who for several years was in charge of the Sanborn Ranch near Mission San Gabriel, is now in charge of the grounds surrounding the Arcadia Hotel at Santa Monica.

John J. Cline, a well known gardener of St. Louis, Mo., where he had charge of W. K. Richards' conservatories and grounds, is in Los Angeles for his health, which has materially improved since coming west.

Some dealers are reporting a shortage of the larger sizes of calla bulbs; smaller sizes are abundant.

After the losses from frost in the celery districts in Orange county it was predicted the industry would suffer this year but I am informed the acreage being planted is larger than heretofore.

J. Aug. Kusche is again in the harness, having resumed his old position with Capt. F. Edward Gray, Ingleside nurseries, at Alhambra. D. R. W.

ASPIDISTRA Lurida fol. var. just now in good condition without leaves, good roots with sprouts, $6 per 100; sample, 90c per doz. postpaid. Canna "Florida" for trial 10 cents.

Asparagus Sprengerii Seed.... { 100, $1.00 / 1000, 8.00

NEW CROP PANSY!

VAUGHAN'S "INTERNATIONAL"

Received the only reward for Mixed Pansies at the World's Fair. It is today better and more complete than ever. It contains the cream of the stock of 10 Pansy specialists. There is no better mixture in existence, as all the florists who saw or used it can tell you. **Price, per oz., $10; 1-2 oz., $5; 1-8 oz., $1.50; trade pkt., 50 cts. (less 10 per cent for cash.)**

VAUGHAN'S "GIANT MIXTURE"

This mixture is specially made up by us from all the separate colors of Giant Trimardeau, the Giant Bugnot and Cassier and several special strains which cannot be had in any other way. If your trade demands large flowers there is no better mixture. **Price, per oz., $4.00; 1-4 oz., $1.25, 1-8 oz., 70 cts., large trade pkt., 50 cts.**

GIANT TRIMARDEAU, Mixed, oz., $1.00; ¼-oz., 30c; pkt., 10c.
"CHICAGO PARKS BEDDING" MIXTURE, oz., $1.00; ¼ oz., 30c; pkt., 10c.
Separate Colors—For price of these see Special Pansy Seed Circular, sent on application.

VAUGHAN'S SEED STORE,
14 BARCLAY ST., NEW YORK. 84-86 RANDOLPH ST., CHICAGO.

BUSINESS IS QUIET.—ACTIVITY OF MEMBERS OF THE FLORISTS' FIRE INSURANCE ASSOCIATION.—NOTES.

Business continues very slow, the hope that the meetings of the L. A. W. and K. of P., which were held in this city in August, would somewhat stimulate our summer trade proving false.

Members of the Florists' Fire Insurance Association are doing some great hustling among their friends, trying to get all the members possible. Their activity is caused by the convention reports which show that many more members are wanted to assure success to the association.

A. Pahud recently bought from the Crown Hill Cemetery Company a number of lots adjoining his property and he now owns an unbroken tract of several acres in a location very desirable for florists.

Martin Brandelin has added to his place a carnation house 20x100.

Miss Minnie Hack, daughter of our gladiolus specialist, fell from her wagon while returning home from market and one of the horses stepped on her hand, fracturing two fingers. H. JUNGE.

HORAN'S PATENT

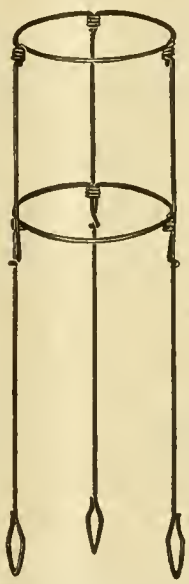
Carnation Support

Patented Aug. 3, 1897.

Following are a few of the many testimonials received from various growers:

Buffalo, N Y, Jan. 25, '98.
Mr Jas. Horan & Son,
GENTLEMEN: — I have in use a few hundred of your patent Carnation Supports. They are supporting Flora Hill. While I consider the first cost rather high, they answer the purpose admirably, not crowding the plants, but affording light and air between them. They should be of various heights and sizes, to suit the different varieties of carnations.
Very respectfully,
WILLIAM SCOTT.

Connellsville, Pa., Jan. 31, '98.
Mr. Jas. Horan & Son,
GENTLEMEN:—I have given your supports a fair trial and consider them far ahead of anything I have ever seen for the purpose, and although they are a little expensive at the start, the fact that the same support can be used year after year, makes them very cheap, and I would gladly recommend them to anyone wishing a perfect support for carnations. Yours truly, L. D. WOODS.



We have made an improvement on our Supports which admits of the rings being let out two inches, which prevents the plant from being crowded as it increases in size. While we think the size we have adopted suitable for nearly all the varieties now in cultivation, we can furnish larger sizes at a slight increase of cost over the regular sizes to those who desire them.

JAS. HORAN & SON, Bridgeport, Conn.

The MODEL Extension Carnation Support

QUEENS N Y., Feb. 16, '97.
MR. THERON PARKER, Brooklyn, N. Y., Dear Sir:—I have tested your latest model Carnation Support and am free to say that I consider it the best wire carnation support that I have ever seen. It is quickly and easily applied, and I think will prove very durable, and you certainly deserve great credit for the invention.
Very truly yours,
C. W. WARD.

FLATBUSH, BROOKLYN, N. Y., Feb. 18, '97
MR. THERON PARKER,
Dear Sir:—Your wire stake is certainly a gem Without hesitating we indorse it as an up-to-date carnation support. Yours truly,
DAILLEDOUZE BROS.

W. HOBOKEN, N. J., Feb. 18, '97.
MR. THERON PARKER, Brooklyn, N. Y., Dear Sir:—It gives me much pleasure to congratulate you upon your success in getting up carnation supports. I think that those I have had from you are about as perfect as anybody will be able to make them. They certainly fill my bill for an ideal carnation support, a thing I have been looking for for a long time. Wishing you every success in the sale of them, I am
Yours truly, E. ASMUS.

W. J. Miller, of the Riverview Greenhouses, has enjoyed an excellent summer season and to give increased facilities for his fall trade is preparing to build a new house 10x57. He has the material on the ground.

Mr. Miller believes that the 800 violet plants which he has benched would be hard to beat. His chrysanthemums and roses are also in fine condition and he is preparing to bench his carnations. He will grow about 2000 of the following varieties: Jubilee, Triumph, Daybreak, Lizzie McGowan, Flora Hill, Mrs. Bradt and Mayor Pingree.

Always mention the American Florist when you order stock.

Worcester, Mass.

Trade has increased considerably during the last week and the supply of good flowers is hardly sufficient to meet the demand. Considerable of this activity in business is caused by funeral work, which, as is usually the case, has come all in a lump, and while we were throwing stock away last week, at the present time we have to hustle to find enough to fill our orders. The greatest shortage is in carnations of which we cannot get nearly enough, as Mrs. Fisher, which is the variety that is generally grown in this locality for summer blooming, has done very poorly this season. In roses the supply is nearer the demand and Kaiserin, Carnot and a few Brides and Maids are being brought in with some degree of regularity.

Potter & Cousins have begun planting at their new location and expect to bench about 10,000 carnations. They will continue to run the old Gormley place until February, when their lease expires.

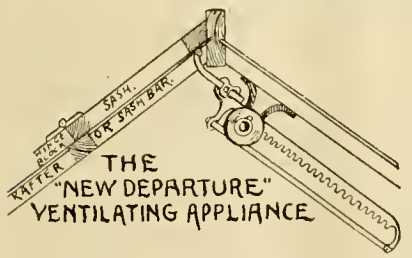
Please mention the American Florist

Harrisburg, Pa.

On my visit to this city, Mr. J. D. Brenneman and his charming wife were more than busy. Flowers outdoors, as a rule, have suffered lately through the heavy rains. In Mr. Brenneman's company I visited his establishment in the north part of the city. Twelve houses, containing 45,000 feet of glass, are planted with roses and chrysanthemums. The plants throughout the place show the very best of culture. The rose, Golden Gate so popular in Washington, is grown extensively and well. In chrysanthemums he has thirty new varieties on trial and his carnations in the field look very promising. Part of a house planted with Semple asters did nicely until a few days ago, when blight struck them. The foliage is decaying while the stems seem healthy. Mr. Brenneman expects to erect five more houses next season. One house is being erected for violets and an additional boiler will be put in before winter.



I took a look at the grounds around the capitol, which are in a deplorable condition. Hydrangea paniculata lost its foliage and bloom because of red spider; the palms and decorative plants show signs of suffering for want of water and the flower beds are not a credit to the state. The conservatories contain a few benches of fairly good looking chrysanthemums and roses. H. E.

Butted Glass.

This is no longer an experiment, it has come to stay. There are various ways of making Butted Roofs, but the best way is with the

Clipper Bar.

With this bar you can make a roof that is absolutely free from drip, and glass cannot be torn out by the wind. Butted glass makes a tight roof, a warm house and saves fuel. It lasts longer, looks better and costs less than the old-fashioned roof. But do not think that this is the only bar we sell, for it is not; we furnish what people want and there is nothing in greenhouse material that you cannot get from us, and all of open-air-dried Cypress clear of bright sap, stained sap, knots and all other defects.

Housing Carnations.

This work is in full swing, and all indications point to the conclusion that carnations will be more extensively grown and of better quality this season than ever before. So great, indeed, has been the increase in the quantity benched that not a few growers find the number of plants on hand insufficient for their needs. Those who have a surplus should advertise it now.

Lilies of Japan.

Although lilies flourish in every known country, sharing the same habits of growth, Japan, the land of flowers, surpasses all for manifoldness of species and exquisite beauty of varieties. Greatest and best known of all is the Lilium auratum, and this species has five more well defined sub-species, viz., L. auratum pictum, so called for the bright crimson spots which cover its petals instead of the brown colored ones of the type; L. auratum virginale alba, which is pure white as to petals, except that through the center of each runs a golden yellow band; L. auratum Wittei, differing from virginale alba only in having raised white spots on the petals; L. auratum macranthum, the foliage of which is oval instead of lanceolate, the flowers enormous and the petals covered with bright golden yellow dots; and L. auratum rubrum vittatum, which is the queen of beauty in this sextet, through whose snowy petals runs a band of blood red.

In Japan the auratum varieties were found growing wild in the forests, the stalks attaining a great height and often bearing as many as forty to fifty flowers each. They are now cultivated in fields for export. The soil in the whole island of Japan is of a volcanic nature (this may be a hint to growers), the same in the fields invariably a heavy clay with substratum of gravelly substance. All manuring is done throughout Japan with nightsoil, chemical preparations being comparatively unknown. The time of flowering being past, the stalks dried off, the bulbs are dug and brought by the farmers to the various purchasers, to be prepared for export. Bulbs are bought from the grower, not by the thousand or more, but by measure, all sizes being mixed. The measure is a "picul," a weight of about 133 pounds.

The auratum bulb so far having foiled all attempts to export without covering or protection against atmospheric influences, the work connected with making it ready for export is laborious. Hillside clay and water is generally used in preparing a mixture the thickness of mortar. The bulbs are graded in sizes either before or after the process of covering them with a rather thick coat of the clay. This work is generally done by women and children, who receive from four to six cents per day. The bulbs, after being well covered with the clay, are laid on trays to dry, not in the sun, but in long sheds, as evaporation must not take place quickly, sufficient moisture being necessary to keep the bulb cool and plump while in transit. This process terminated, each size is packed in the well known export cases. Each layer is covered with dry, finely pulverized clay, and the top being reached, the cover is nailed fast, the respective consignee's mark put on with stencil, and the case is ready for transport to the "Hatoba," the shipping place for foreign steamers.

We have found, in long experience, that the roots of the auratum love to twist around moss and have invariably placed in the bottom of pots or boxes a generous layer of some rich forest moss. They love heavy soil and are impatient of too much moisture, which easily induces decay of the scales. Bulbs of the earliest importations are not as good as those coming in later and which are better ripened.

Other beautiful lilies of Japan are the L. speciosum or lancifolium types, speciosum album, speciosum rubrum and Melpomene, the latter a velvety dark subform of rubrum. All speciosum sorts have come more to the front in latter years, having been found well paying investments; moreover the bulbs do well for years, flowering every season, not being much subject to decay.

Another valuable species is L. elegans or Thunbergi. These all have upright calyxes, stiff stems and are very easy of cultivation, adapting themselves to any surrounding and growing and multiplying rapidly. The best known varieties are: L. elegans, red; L. atropurpureum, or atrosanguineum, with velvety, dark crimson petals, incomparable, beautiful shade of red with deep orange base; L. elegans semiflore pleno, so called on account of its stamens forming a feathery white inside, which makes the flower appear semi-double; L. elegans, orange, or Dahuricum, a brilliant shade of orange yellow; and L. elegans Alice Wilson, the rarest and most choice, with petals a very delicate lemon yellow.

Other valuable species are L. Batemanni, which grows anywhere and everywhere and lifts its tall spikes, crowned with six to eight bright apricot-colored flowers; the tiger species, L. splendens and flore pleno, single and double; L. Leichtlinii in two sorts, one canary yellow, the other scarlet, both with purplish spots; L. Kramerii, that exquisite pale rose trumpet lily; L. Hansonii, with thick, golden yellow petals, spotted brown, the flowers of which keep for weeks in water; L. Brownii, a long trumpet, creamy inside and flushed lemon to pale purple on the outside; L. coridion and L. concolor, liliputians with delicate stalks but a foot in height, star-like flowers, yellow or scarlet, gemmed with tiny dark dots, exquisite for floral work and well adapted for small plots or borders; L. cordifolium giganteum, with heart-shaped foliage and gigantic in proportion, a rider on horseback barely tow-

ering over their stems when entering a mass of them; L. Kamtshatkense (also found in Siberia), the black lily, with its delicate bell-like bloom of a velvety blackish purple; L. callosum, bell-shaped, scarlet; and last, but not least, L. longiflorum, the familiar Easter lily, whose only drawback is that it is not co-equal with its transplanted relative, L. Harrisii, in blooming time. Over a million longiflorum bulbs are exported yearly, the larger part finding their way to Europe. They are merely packed in dry soil or in rice chaff mixed with soil.

A few new species have lately been found and a few samples exported: L. Uke-Yuri, flowers similar to longiflorum, with shorter trumpet and dark stamens, foliage like the speciosum type, forces well, but is as yet rare and expensive; L. Alexandria, a pale pink species, whose counterpart is found in the high latitudes of the state of California and the north Pacific coast and know under the name of L. Washingtonianum; also a sub-species of Lilium longiflorum, with curious dark purplish stem, the trumpet white on the inside, but a deep puplish outside, which seems almost like a cross between Lilium Brownii and the pure longiflorum type; bulb and habit same as longiflorum.

The greatest success in the culture of lily bulbs is surely attained by following as closely as possible in the footsteps of Mother Nature, trying to give these children of the forest as much as possible the requirements of their native element, the rich, moist soil, the partial shade and, above all, loving care.

New York. H. H. BERGER.

Deutzia Corymbiflora.

This new deutzia was sent to France by Abbe Farges, of the foreign missions, who found it in Sse-Tchuen, China, and forwarded seed of it to M. Maurice de Vilmorin, the well-known dendrologist, in 1895. The seed germinated well and produced young plants which flowered in 1896. They were exhibited for the first time before the National Horticultural Society of France under the provisional name of D. corymbosa, an improper one, as it should be applied to a form of the Chinese species D. parviflora, which is quite different from the plant in question. It is under the slightly different name, Deutzia corymbiflora, that this novelty has been introduced by M. Boucher, horticulturist of Paris, and by Messrs. V. Lemoine & Son, of Nancy.

It is a finely-shaped, much branched shrub, making a height of about four feet. The branches of the current year's growth are erect, with bronze green bark, internodes long, leaves wrinkled, deep green above. The one year-old branches carry at each axil corymbose panicles once or twice branched, each division containing as many as 100 flowers and buds. The pedicels are short and slender; the calyx cup-shaped, clear green with five very short lobes. The five petals are wide at the base and pointed. The flowers when fully open are snow white and measure two-thirds of an inch in diameter. The stamens (five large and five small) have large winged filaments, which completely enclose and hide the three short styles, giving the flowers, though smaller, much the appearance of the flowers of Solanum jasminoides. Their number is so great that for six weeks the shrub appears covered with snow. The flowers appear in the latter part of June, following D. crenata. Owing to the number of buds which open in succession from the center of the clusters to the outside the appearance is equally as fine at the end of July as at the beginning of the flowering season. The shrub also occasionally flowers again in September, but less plentifully and the autumn blooming has no bad effect on that of the following year.

Deutzia corymbiflora has withstood two winters in Lemoine's nursery without killing back in the least. It prefers a light soil. The best specimens are found in half shade. It is a novelty of sterling merit and produces excellent effects either isolated on the lawn or planted in groups in front of larger shrubs in the border.

DEUTZIA CORYMBIFLORA.

Carnation Culture.

As many carnation growers do not plant their houses until October 1, or thereabouts, it has been suggested that some of them would like explicit directions for the operation. It will, of necessity, be somewhat of a repetition of former remarks. As in everything else relative to carnation culture, the difference of soil, climate and locality make it impossible to lay down any set rules for the grower to follow, so the following are offered merely as suggestions.

It is generally conceded among successful carnation growers that early planting gives the best results, so the earlier you get your stock housed the better. But, like every other rule, this one has exceptions, and unless your plants are of fairly good size it will be better to wait and give them the benefit of the good growing weather we have through September, as they will make better growth outdoors than they can possibly make inside and it will be easier to transplant them in October than it is now, especially if we have a hot dry spell, as we often get for a few days at a time during this month.

If your plants are ready, the next thing is to see that your soil is prepared to receive them. If it has not been especially composted it will require a liberal amount of well rotted manure. The amount used will have to be according to the special needs of your soil; some soils would stand a proportion of manure to equal one-third their bulk; others might not want more than one-sixth. This fertilizer should be thoroughly mixed with the soil, although some growers advo-

FLORISTS AT SEED FARMS OF JAMES VICK'S SONS.—SEE ROCHESTER NOTES, PAGE 184.

cate its being in the bottom of the bed while others have it on the top. But there is danger of its becoming water-logged in the bottom and with it on the top it is liable to induce stem rot if your stock is at all susceptible to this disease.

Almost as important as the manure is to have the soil thoroughly watered so that it is wet clear through to the bottom. This should be done, according to the heaviness of the soil, from one to three days before planting, the object being to have the soil moist when you plant and yet not wet enough to be the least bit sticky in handling. On no account plant in dry soil, as the contact of the dry soil with the feeding end of the little rootlets has a tendency to injure them and you will want roots in best possible condition so as to at once carry the moisture to the top and keep it in growing condition.

After the soil is in condition see that every preparation has been made to bring the plants from the field with as little delay as possible. Ordinary greenhouse flats make the best boxes for carrying them, as they should not be crowded into deep boxes and should be well watered as soon as a flat has been filled. The plants should be taken up with care to see that the little rootlets are as nearly as possible all saved, for it is these rootlets that are the life of the plant. A good plan, where you have the men to do it, is to have two men in the field and two planting inside. As soon as four flats have been filled, making a barrow load, bring them in and so keep it up until finished.

Use care in planting to see that a hole is made deep enough and large enough to spread the roots of the plant as nearly as possible as they were in the field. See that the soil is filled in firmly around these roots. Especial care must be used not to have the plants any deeper in the soil of the house than they were in the soil of the field, and the plants must be set erect. After every third barrow load the section of house planted should be well watered to get the plants thoroughly cleaned up from any dirt that may have lodged on them. Two planters who use proper care in handling and watering can keep two men in the field busy.

Unless the weather is actually cloudy it is well to shade the roof of the house pretty heavily for at least a week after planting. This shading can be of lime, mud, or anything that will answer the purpose and is not too hard to clean off. It should not be left on longer than time sufficient to give the plants a good hold and must be cleaned off thoroughly as soon as the plants can stand the sun, for it is not wise to allow them to soften in a shaded house, as they will surely do if not given the benefit of the full sunlight.

For the first few days it is well to syringe them three times daily, once in the morning, again at noon and again at about five in the afternoon. Some growers might object to this late syringing, claiming that they should not be wet over night, but this late syringing acts very much the same as a good heavy dew and freshens the plants so that they can stand the next day much better than if they were allowed to remain dry over night. The object is to keep them from wilting and the few days of heavy syringing necessary to do this is not long enough to hurt them otherwise. After they have taken hold it will be well, for the first few days after the sun is allowed on them, to give them a syringing once in the morning and once at noon, and omit all such treatment as soon as the plants can get along without it.

Ventilation can be left on day and night through the month of September without any danger, and in fact the plants will be the better for it, unless an unusually cold night were to come. When the plants are first set you must be careful not to have a direct current of air pass over them, for there is nothing which will cause the plants to wilt so quickly. After they have started the more air you can give them the better, as it helps to harden them for their long winter confinement.

Staking or tying up should be done as soon as possible after planting. If it can be done the same day all the better, as you do not want your plants to fall over and become used up by lying on the ground. There are one hundred and one ways of supporting carnations. My way is not the best way but it answers the purpose very well and is not particularly expensive. I use straight, heavy, wire stakes. These are placed between the plants in the row and then a loop is run around the two stakes enclosing the plant. This supports them nicely and at the same time allows the plant to be loose enough to get the benefit of light and air among its foliage.

The question of taking plants from the

field with or without a ball of earth is one that is sometimes brought up, but this is really entirely a matter of soil. Where the soil shakes off nicely without breaking the small roots it is better to shake it off, but where this can not be done it is better to leave it on. The greatest danger from leaving a clump with the plant is of its becoming hard and thus retarding the action of the roots in the same manner as a plant is injured by being pot bound. In some cases where the earth is especially stiff and hard it would pay to take the plants up with a good sized clump so as to get all the roots and then wash the soil off before planting them.

It is well to remember in bringing the plants in from the field that it is really their start as money makers and the better care we use in the process the more money we are likely to get out of them.

ALBERT M. HERR.

Annual Exhibition of the Massachusetts Horticultural Society.

Fine specimens of tropical plants were in abundance at this, the annual autumn show of the Massachusetts Horticultural Society. Cut flowers were scarce, excepting native flowers, which yearly interest a larger number of people.

The special features of the show were Dr. Weld's and Jason Bailey's exhibits of stove and greenhouse plants, fine Rex begonias from E. S. Converse and Mitten & Little, anthuriums from C. H. Souther, dahlias from William Winter, H. F. Burt and Lothrop & Higgins. J. Warren Clark showed a new seedling gladiolus of the Gandavensis type, pale yellow in color, named Canary Bird. F. L. Harris, for H. H. Hunnewell, sent splendid specimens of Adiantum Farleyense, Asparagus Sprengerii, which was suspended from the roof with fine effect, and an excellent plant of Encephalartos Ghellinckii. A finely colored seedling dracæna was in N. T. Kidder's lot. The Japanese exhibit added novelty. There were many gnarled specimens of coniferous plants and some really neat plants, judged even from western standards. Three variegated forms, Sciadopitys verticillata and two of Podocarpus Nageia were especially interesting as being distinct members of the order coniferæ.

The society's prizes for a pair of palms went to Dr. Weld. First for a collection of greenhouse foliage plants went to Jason Bailey, including splendid specimens of Cyanophyllum magnificum, Livistona rotundifolia, Dieffenbachia Menori var. Corsii, Bacularia monostachya, the walking stick palm; Sphærogyne latifolia, Maranta Makoyana and M. Van den Heckei, Alocasia Sanderiana, A. Thibautiana, Davallia Fijiensis, Maranta rosea picta, Phœnix rupicola and Kentia Belmoreana.

J. L. Gardner's group contained a fine specimen of Nephrolepis davallioides furcans, well grown plants of Caladium argyrites and Livistona rotundifolia.

For six stove and greenhouse plants, including crotons, N. T. Kidder was first. He had fine plants of Aralia Kerchoviana, Phœnicophorium Stevensonia, Gleichenia dicarpa longipinnata and Sphærogyne latifolia. Dr. Weld's second prize lot included Croton Queen Victoria, Phyllotænium Lindeni, Dracæna Wellesleyana and Adiantum cuneatum. J. L. Gardner was third.

For a specimen flowering greenhouse plant the prize went to N. T. Kidder for a good plant of Clerodendron Balfourianum as also the prize for six named caladiums. The prize for six named varieties of ferns, exclusive of adiantums, went to Dr. Weld; among them were Lomaria gibba, Davallia Mooreana and Nephrolepis davallioides furnans. For specimen fern, first to H. H. Hunnewell for a grand plant of Adiantum Farleyense, second to N. T. Kidder for Davallia Fijiensis. For five adiantums, first went to Dr. Weld, among them A. Cunninghami, extra fine, and A. Reichenbachiana. Selaginellas, first to Dr. Weld, with especially fine plants of S. Karsteniana and S. caulescens. Cycad, first to H. H. Hunnewell, with Encephalartos Ghellinckii.

Six orchids, first to Mr. Rothwell on an exhibit including an especially fine plant of Cattleya Harrisoniana, light pink with yellow throat; Dendrobium Phalænopsis, a very pretty Oncidium lanceanum, dark brown spotted sepals and petals and violet lip. First for Rex begonias went to E. S. Converse, second to Mr. Mitten. Mr. Green, gardener for Mr. Little, showed an immense plant of Begonia Haageana loaded with bloom; Mr. Roy, gardener for E. S. Converse, a large pan of Fittonia argyroneura; James Farquhar, a large collection of French and Italian cannas, though no improvement over recent varieties was noted. Phloxes came from Rea Bros. Mrs. Gill carried off the honors for a table piece.

James Comley had a display of asters and several unusual flowers, with Boconia cordata in seed and spikes of Hedychium Gardnerianum. Several new forms of bedding begonias of the semperflorens type were shown by Mr. Green, gardener for Mr. Little. W. W. Rawson filled the stage with an effective display of dahlias. The pompon dahlias attracted more attention than the show varieties. Mr. Blake was the only competitor for evergreens in tubs for the Hunnewell prize. He had a neat lot. T. D. H.

STOCK PLANTS OF FICUS IN BENCH.

Ficus Elastica.

It seems to make but little difference how many plants of ficus are placed upon the market, the demand keeps pace with the supply and the new crops of spring and fall find ready customers. At least ten times as many rubbers are grown now as were to be found ten years ago. The system of propagation in vogue then was to root sections of stems with single eyes and a leaf attached, these being placed each in a small pot of sand and plunged in moss or sand in a close frame in the propagating house. Now one of the most approved methods, as seen in the accompanying illustration, is to prepare a bed and set out the stock plants to remain and from which propagation by cuttings and mossing the shoots goes on all the time. Care must be taken that scale does not get a hold on the stock plants, as it soon spreads to the young shoots and gives the grower a lot of trouble. Robert Craig, whose house is here figured, claims to secure stronger and sturdier plants by these bed cuttings than those rooted from stock grown in pots, as he starts with broad leaves right from the bottom, while with the other system the lower leaves are as a rule smaller, from the fact that the growth of the shoots is not so robust as from plants in the ground. K.

New York.

HOT WEATHER HAS BAD EFFECT ON BUSINESS AND STOCK.—WHOLESALERS' TRIALS.—ABUSES COMPLAINED OF.—IMPORTERS HAVE TROUBLE WITH THE APPRAISERS.—A WHITE BLACKBERRY.—THE FIRST VIOLETS.—AUCTIONEER CLEARY MARRIED.

All coats off, has been the rule for the past ten days, not because of busy times but all on account of the torrid temperature which has descended upon New York with unprecedented severity. People do not want to buy flowers this weather, but the flowers come in just the same as though they were wanted and in increased quantity, but much decreased quality because of the "parboiling" they have gone through. Roses lie prone in the boxes, carnations are mere rags and asters alone stand up stiff and unwilting in spite of it all. The average wholesaler would, if he could have his own way, shut himself up in his refrigerator, but present necessity demands that he shall go out of town on the cars which are like ovens, to the greenhouses that are too hot to enter and try to get on amicable terms with the proprietor, who, of course, is becomingly non-committal regarding the season's prospects and discreetly leads his caller to the contemplation of a palm leaf fan and the shady side of a tree.

When one can get a wholesaler pinned down to talk seriously and confidentially about business methods as they exist at present he gets well repaid for his trouble. Long credits and slow collections come in for their full share of denunciation at such times. This matter has now become so

A BRANCHING FICUS.

momentous that stringent measures are likely to result from its agitation. But there is another abuse that is rapidly reaching such proportions that an uprising against its tyranny is imminent. That is the custom of "tips" which the buyers for many establishments have come to demand. It is only fair to the proprietors to say that in most cases they know nothing about it. But it has got so now that if a wholesaler wants any trade he must come down liberally and often, and the man who brings in the check to pay a bill expects a generous commission for his services. Many a loan is out, payment of which the creditor dare not ask, and the habit is growing.

Importers complain of the methods in vogue at the appraiser's office this season. Goods are held for days, with great injury to the perishable stock, on account of suspected undervaluation and arbitrary advances in valuation are made, the only resort for the importer being a protest that cannot be acted upon in time to be of avail in fixing the selling price of the goods. These complaints are so general and are made by concerns of such good repute that some attention should be given them and an effort made to so expedite and systematize the work of examination that injustice will be avoided. One good result of these annoyances, however, is that they emphasize the necessity for encouraging and developing home productions so that, as soon as possible, we may be independent of both foreign producers and custom houses.

A white blackberry is one of the sensational novelties of the season.

Ford Bros. proudly waved the first bunch of violets on August 27.

J. P. Cleary, of the firm of Cleary & Co., horticultural auctioneers, was married at Sing Sing, to Miss M. Creedon, September 5.

Philadelphia.

THE MATTER OF PEDDLING SHOE STRINGS AND CUT FLOWERS.—BUSINESS IS GOOD.—IMPRESSIONS OF OMAHA AS TOLD AT THE CLUB MEETING.—NOMINATION OF OFFICERS.—PERSONAL MENTION.

At last the hot spell seems to be broken and the change is very welcome. Beauties have been hard to handle as they opened wide in the boxes while being peddled. How much longer is this antiquated method of peddling stock around town in the effort to find customers to continue? Shoe strings, lead pencils and papers of pins are still carried about by sorry looking people whose helpless condition arouses the sympathies of the public and sales are made. How many store keepers take compassion on the flower peddler and purchase his stock from a sense of duty we are not prepared to say, but we are certain that if these various peddlers would get together in some central location early in the morning, they would do just as much or more business in half the time it now takes them to go over their routes, and at the same time keep their stock in much better condition. There is not a single redeeming feature to the present system, while the market plan has never yet failed to be successful.

Business is fair for the season and shows some improvement over the same time last year, which, if it holds out, will carry out the prediction of a big season. H. Bayersdorfer & Co., and M. Rice & Co., are very busy with their shipping trade, more than usual at this season and are much pleased with the prospect.

Prices of flowers remain about the same except for asters, which are on the wane. The aster probably takes more looking after when it gets to the retailer than any other flower. The lower leaves on good fresh stock will discolor in three hours if kept in jars of water and standing over night almost renders them unfit for sale. Can some one recommend a better way to keep them?

The September meeting of the Florists' Club was well attended, considering the weather. Wm. Monroe, foreman for Myers & Samtman, was elected to membership. What the boys saw at Omaha, was told by Messrs. Craig, Westcott, Habermehl and Longinotte. Mr. Westcott said he was very glad he went; his eyes were opened to things he had never seen before and there was as much business done at this meeting as at any other he had ever attended. He thinks he has convinced the powers that be, that one whole day of the convention should be given up to sports. Many spoke to him of the Philadelphia carnation meeting and the attendance on that occasion will, he thinks, be a record breaker.

Mr. Craig said the plant display of the exhibition was rather disappointing as there was no local stock to draw from and the distance was too great for the eastern shippers. The display of bulbs from the state of Washington he thought the most interesting feature of the exhibition, the stock shown being fully equal and in some respects superior to the best imported. The question of expense would now come in, but if they could be grown as cheap hear as abroad ex-President Smith's dream would become a reality. An interesting point to him he learned at at Chicago and that was that the C. B. & Q. R. R., paid over $5,000, for American Beauty roses last year for use in its dining car service. Here is a field as yet unopened in the east and one that will bear looking into.

W. K. Harris, John Westcott, Edwin Lonsdale, and J. W. Colflesh were nominated for the offices of president, vice-president, secretary, and treasurer respectively, being equivalent to re-election in each instance.

H. F. Michell was present, looking all the better for his European trip which, by the way, is to be the subject for the next meeting, when Mr. Michell will tell us of the many interesting horticultural things he saw while abroad. Charles Sim is also back from his visit to England and says he had a most enjoyable time.

Harry C. Sim, the far western traveler of the Dreer firm, will take to himself a wife next week. Mr. Sim is the last of their seven salesmen to enter into the wedded state.

F. R. Pierson, together with Mr. Cook and Mr. Worthingham, all of Tarrytown, were visitors the past week.

Abraham Knowles' funeral was held on Wednesday last. A committee from the Florists' Club was present and sent a large wreath of cycas leaves garlanded with President Carnot and Beauty roses and orchids as the club's emblem. The body was incinerated and the ashes will be taken to England for interment. K.

Boston.

BUSINESS GOOD.—MUCH FUNERAL TRADE.—WHOLESALE PRICES GOOD FOR SEPTEMBER.—KAISERIN IN DEMAND.—EDGAR'S BEGONIAS.—A NEW FERN.—WREATHS IN ESPECIAL FAVOR AS DESIGNS.—A NEW GARDEN FLOWER CERTIFICATED.

The flower trade can be described as excellent for the season, judging from the amount of work being done by the retailers or the prices being received by the growers. The great bulk of the retail demand is for funeral purposes, and there seems to be an abundance of it on all sides. The seaside trade has not been

over-brisk this year but, such as it is, it still holds on, owing to the steady hot weather that has prevailed for some time. September is making an unprecedented record for high temperature.

The growers are getting better values for their stock than u ual at this season. This refers to good quality stock only as poor stock is not wanted for any purpose. Good Beauties bring from $2 to $3 per dozen, and Kaiserin when well grown and carefully handled is readily disposed of at from $8 to $12 per 100. Meteors come next in desirability and Bridesmaid follows close behind. Bride begins to feel the competition of the Kaiserin as a summer rose but in a few weeks it will easily regain its ascendancy. There is no difficulty in getting $1.50 to $2 per 100 for fine Scotts and white carnations, and even asters, if of the Semple strain and well grown, bring carnation figures, but the common asters are not worth more than 25 cents a hundred. Hydrangea is being used largely as a ground work for funeral designs and with white Japan lilies is a boon for the design makers who would otherwise be obliged to go deep into the cash drawer to get desirable white material.

Wm. Edgar is making a big strike on Begonia Gloire de Lorraine. He has many hundreds of plants already coming into flower and in a few weeks his houses will be a grand sight. A new fern which he is pushing vigorously is Anemia collina, called the flowering fern. The foliage is very tough and well adapted for jardiniere work, and the spikes of greenish bloom are slightly fragrant.

Of twenty of the more elaborate designs sent to the funeral of Maj. O'Connor, of the 9th regiment, ten were wreaths of varied material. There was not a pillow, broken column or gates ajar in the entire collection. This affords a little idea as to how the taste is tending in this locality.

Jackson Dawson received a certificate of merit at the exhibition last week for Polygonum compactum, a lovely pure white garden species of dwarf habit which well merits its title of mountain fleece.

St. Louis.

CARNATION PLANTING NOW PROCEEDS.—ROSES LOOK WELL.—SALE OF PALMS AND FERNS.—SHOW COMMITTEE WILL MEET.—PILGRIMS COME HOME.—CHARLES KUEHN MAKES IMPROVEMENTS.

At last there is a suggestion of the fall season in the air. A general rain throughout this section on Monday brought the temperature down with a jump to 50°. The change was most welcome to the carnation growers, as several of them who believe in early housing had to suspend work during the hot spell. Operations have been resumed, however, and work is progressing nicely. Some violets are also being housed in expectation of early cutting.

Rose stock is looking well; some is a trifle small but will be given time to catch up before cutting. About the best things coming into the market in cut flowers, are Beauties in roses, and Portia and Flora Hill in carnations, some of the latter being especially good for this time of the year. There is quite a lot of poor stock coming in and it drags along until somebody wants a job lot, when it is unloaded. Last week has been reported by several retailers as the dullest they had ever seen, but the last two days have been a marked improvement, one house reporting having been very busy.

The sale held by the St. Louis Cut Flower Co. of palms and ferns, grown in the Old Orchard establishment, has proved quite a success, and is being continued this week as quite a few of the buyers could not be present on the original date. For the convenience of the city trade, the sale is being held at the Michel Plant and Bulb Company's greenhouses. The stock is in elegant shape and reflects credit on the grower.

A call has been issued by the chairman of the chrysanthemum show committee for a meeting. A revision of the preliminary premium list will be the first matter attended to, and the numerous special prizes will be inserted, to give prospective participants a better chance to select the classes they wish to compete in. This will be a new departure and should prove advantageous to the exhibitors. Weekly meetings are in prospect until the show is over.

John Young and daughter and Mr. and Mrs. Fred C. Weber returned Monday from their western trip, which was extended through Colorado from Omaha after the convention. They were all delighted with the country.

Mr. and Mrs. Biechle, of the Riessen Floral Company, returned from the north, stopping several days in Chicago enroute. They report an enjoyable time.

A call on Charles Knehn found his place in the midst of numerous improvements. He has made extensive changes and alterations both in his cut flower and wire working departments, and is better fixed than ever for handling his trade. The preparations look as though he expected a substantial increase in business the coming season.

The bowling club has held its meetings since returning from Omaha at the Grand Alleys, and as they are the only strictly regulation alleys in the city, the supposition is that it will continue to meet there.

R. F. T.

Chicago.

UNUSUAL WEATHER CONDITIONS OPERATE TO THE INJURY OF BOTH STOCK AND BUSINESS.—FANCY CARNATIONS BRING A GOOD FIGURE.—PETER BARR, OF LONDON, IS A VISITOR.—JOTTINGS.

Stock is not what it should be either as to quality or quantity. The erratic weather which we have experienced during the past two weeks is entirely responsible for the reprehensible conduct of the blooms for its influence has been very bad. The tremendously hot period followed by a drop in temperature of nearly 40° was enough to give any class of stock a set back and it did it.

There is a very fair demand for all good blooms but since the weather approached the frost mark they have been scarcer than the week before when the mercury threatened to boil over in the tubes of thermometers. Roses were coming on finely until the temperature went soaring and then there were plenty of them, only a trifle sunburned and wilted, but when the cold wave struck, the blooms stopped coming just as much, as one grower said, "as though the days were all nights."

Here and there, before the cold, some one who planted carnation houses extremely early was cutting a few pretty fair blooms and one or two had "fancies" which commanded $1.50 per hundred. The ordinary stock brought 75 cents and it was only now and then during the week that a fakir was able to strike a bargain, and every time it was in Portia or Scott; not a white flower was sacrificed. It was the same way with roses and the prospects are that, now that society is awakening from its summer siesta, the demand will be fully up to the supply even after the plants recover, as they will in a day or two, from their check.

Among the growers there is an increased activity, but retailers as yet feel little effect from the advent of autumn.

Peter Barr, dean of European horticulturists and famous as a daffodil specialist, has been spending the week in Chicago. On Wednesday Mr. Barr with engineer Schrader, Messrs. Sanders and Vaughan made the circuit of the west park system, calling on the head gardener at all the parks, Zapel at Douglas Park, Sell at Garfield and Kleppin at Humboldt, also on Superintendent Jensen at the latter, finishing the day with a call at Mr. Uihlein's home in Ewing place where gardener H. Skjoldager is in charge. Mr. Barr expressed himself as delighted with the trip and satisfied that the Chicago park system was the finest he had ever seen.

O. J. Friedman has been appointed chairman of a committee to solicit funds for the Peace Jubilee and has able assistants in W. N. Rudd and J. B. Deamud.

Mrs. Horton has resumed her duties at Bassett & Washburn's after a very pleasant two weeks outing among Wisconsin lakes.

E. H. Hunt is spending two weeks among the many Wisconsin resorts.

Wietor Bros., evidently believe that the carnation is a flower of increasing popularity as they are now busy planting and will have nine houses more than last year.

One and the same baby makes James Gurney, of St. Louis, and Fred. Kanst, of this city, proud and happy grandfathers.

James Gurney, superintendent Tower Grove Park and Shaw Botanic Gardens, St. Louis, Mo., has visited here on a trip east.

U. J. and Mrs. Virgin left for New Orleans five o'clock Sunday.

A canna party composed of James Gurney, Peter Barr, Fred. Kanst, Jr., and J. T. Anthony visited the Western Springs establishment of Vaughan's Seed Store Labor Day. Some good things were noticed among the new seedlings.

W. H. Elliott and Mrs. Elliott left Chicago for home Wednesday morning.

Miss Minnie Binder, with J. M. Gasser, and returning from Omaha and points west, spent a few days with friends in the city previous to her departure for Cleveland.

C. B. Totman, representing the Wooden Goods Company, was down from Minneapolis this week.

W. C. Zimmer, of Eve, Mo., who makes roses a specialty, saw the sights in Chicago for a couple of days this week while enroute home from a pleasant visit with relatives in Indiana and Michigan.

A. J. Schmidt and R. Mayer have leased the Reissig houses at Riverside and have prospects of a fine business. Both gentlemen are good growers, being former employes of Lincoln Park.

BELOIT, WIS.—John Rindfleish is moving his greenhouses to a new location and is considerably enlarging his establishment.

HUDSON, N. Y.—The greenhouses of J. Hallenbeck have been sold to D. H. Saunders, who will move them to Athens and use them for vegetable forcing.

ANDOVER, MASS.—The Florists' and Gardeners' Club has decided to abandon the exhibition which they proposed to hold in September for the school children and public of Andover, because of the small number of entries and slight interest manifested.

THE AMERICAN FLORIST

Subscription $1.00 a Year. To Europe, $2.00. Subscriptions accepted only from those in the trade.

Advertisements must reach us by Wednesday to secure insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

PROF. HERBERT L. JONES, of the department of botany in Oberlin College, Ohio, died at the home of his parents in Granville.

"WAR aint no bloomin' chrysanthemum show" was the all too truthful remark of a soldier-florist recently arrived from Cuba.

THE excellent collection of the flora of Greenland made in 1895 and 1896 by Evelyn B. Baldwin, the arctic explorer now with Wellman, will be permanently installed in the botanical laboratories of of Northwestern University, Evanston, Ill.

THE third annual chrysanthemum show of the Texas State Floral Society will be held at Waco, Texas, November 10, 11 and 12. The premium list, just issued, is bound in patriotic colors and contains essays on chrysanthemum culture as well as class and prize lists and the roster of the 200 members of the society. Mrs. Louis Crow is secretary and James Morton, Clarksville, Tenn., will judge the exhibits.

REFERRING to the times of Richard Hartland, grandfather of Wm. B. Hartland, the daffodil grower of Cork, Ireland, Brother Fraser, of the *Gardening World*, remarks that Nemophila insignis and Collinsia bicolor were then grown in the Emerald Isle. While it is stated that the elder Hartland died in 1821, as a matter of fact these plants were not known in either British or Irish gardens until 1833. Both plants are natives of California.

Cut Flower Price Lists Received.

Bassett & Washburn, Chicago; Holton & Hunkel, Milwaukee; Vaughan, McKellar & Winterson, Chicago.

Catalogues Received.

W. P. Simmons Co., Geneva, Ohio, plants; New Jersey Moss & Peat Co., Barnegat, N. J., moss and peat; Western Seed & Irrigation Co., Waterloo, Neb., seeds; T. S. Hubbard & Co., Fredonia, N. Y., small fruits; Wooden Goods Co., Minneapolis, Minn., labels; Thompson's Sons, Rio Vista, Va., strawberry plants; Henry A. Dreer, Philadelphia, Pa., strawberry plants; J. H. H. Boyd, Gage, Tenn., tree seeds; Geo. H. Hanock, Grand Haven, Mich., carnation plants; Hugh Low & Co., Middlesex, Eng., shrubs; Vilmorin-Andrieux & Co., bulbs and seeds; Julius Hansen, Pinneberg, near Hamburg, Germany, lily of the valley crowns; E. Schwartz, Tempelhof, near Berlin, Germany, lily of the valley crowns.

Greenhouse Building.

Doylestown, Pa.—J. E. Andre, one rose house.

Conshohocken, Pa.—W. S. Harry & Sons, two commercial houses.

Mt. Joy, Pa.—M. E. & R. Hoffer, range of greenhouses.

E. Palestine, O.—D. Faulk, one commercial house.

Bangor, Me.—A. Sekenger, one commercial house.

Hartford, Conn.—E. M. Francis, two greenhouses.

Baltimore Co., Md.—Jesse Tyson, two palm houses, two greenhouses and one grapery.

Glastonbury, Conn.—J. R. Morgan & Son, one commercial house.

Newton, Mass.—W. R. Sanderson, one house 20x50.

Woodside, N. Y.—A. S. Burns, one house 16x70.

Framingham, Mass.—S. J. Goddard, two commercial houses, each 20x100, one 12x95, one 12x40 and a packing room 40 feet long.

Detroit, Mich.—City greenhouse to cost $3,475.

Wheaton, Ill.—A. T. Peterson, two commercial houses.

Greenhouse Heating.

ED. AM. FLORIST:—I have a greenhouse 20x120, east and west, which I propose to divide into two parts, one seventy feet for roses on benches, the remaining fifty feet for carnations on solid beds. There is a row of 16-inch glass on the south side, but the north side is double planking with paper between. How much steam pipe do I require? Each part of the house to be piped separately, the seventy foot end, that nearest the boiler, having 1½-inch pipe and the fifty-foot end having 2-inch pipe. Kindly tell me the amount of radiation to allow for each square foot of glass. U. S. G. H.

Where the temperature does not drop more than 10° below zero one 2-inch main and ten 1½-inch returns will answer for the rose house, but in a severe climate it would be advisable to increase the size of the supply pipe, and add about two returns for each ten degrees of cold.

For the carnation house one 2-inch flow and five 2-inch returns should suffice for average conditions, but the number should be varied about one pipe for each ten degrees difference in temperature.

L. R. TAFT.

A Question of Coal.

ED. AM. FLORIST:—I am putting in a new hot water boiler and had planned to use soft coal, but am told by some that with hard coal there is less danger of gas. Can you tell me whether there is or not? What is the best coal to use and where can I buy it the cheapest?

Iowa. L. E. P.

With a properly arranged plant there will be little if any more danger from gas when soft than when hard coal is used. The heater should be especially constructed for burning soft coal, with large fire openings and with the surfaces so arranged that they will not invite the settling of soot. The heater should have all parts easily accessible for cleaning. To equal a heater burning hard coal the size of one to be used with soft coal should be twenty-five per cent larger. The chimney should also be rather larger and higher. Any good run of mine coal will answer, but as the question as submitted only shows that "L. E. P." lives in Iowa, I cannot advise where to purchase coal, beyond saying that he should be able to get low rates by the carload from some of the north Missouri mines, with which he has ready railroad communication.

L. R. TAFT.

Pinching Smilax.

ED. AM. FLORIST:—Is it right to pinch back the young growths of smilax plants after they are planted in the beds? If so, when should this pinching process be stopped and the growths trained to the string? Should the ventilators be left open nights, or closed? The house is planted entirely with smilax.

SMILAX GROWER.

Replying to above, there is nothing gained by pinching smilax until it has grown to the desired length. Strings should be attached to thrifty growing plants as soon after they are planted as is convenient and practicable. It is much easier manipulated then than if allowed to become entanged, for to attempt to disentangle the vines is tedious and not at all profitable. The ventilators should be at all times left open at night if the temperature is not lower than 65°. The warmer the house is kept the quicker the smilax grows, provided, of course, sufficient moisture is given; but a quick growth, is a soft growth, and that is not always desirable, because after being cut when in that condition it wilts too quickly to be satisfactory. Some growers prefer to keep the night temperature, when controllable, that is, after firing is commenced, as near as possible to 55°. It is then hard enough to cut on emergency at any time. Others grow it more rapidly, say in a night temperature of 60° to 65°, and put it through the hardening process when most of the strings have attained the desired length. When a florist uses the most of what he grows in his retail business, he frequently finds it necessary to use some strings before it is long enough to cut from the grower's standpoint, who disposes of his stock at wholesale. Personally, I am inclined to believe when smilax is grown under the warmer temperature it is the most profitable.

E. L.

Accelerating Smilax Growth.

ED. AM. FLORIST:—I have a house of smilax, planted the first week in August in good, rich soil. Do you think I can have it in for Christmas? How can I hasten its growth? It is quite small.

A NEW BEGINNER.

Smilax planted the first week in August ought to be ready to cut at Christmas, that is to say the bulk of the crop should be fit to cut at the time indicated, for, as a rule, it is not all ready for the knife at the same time, which, generally speaking, is an advantage. "A New Beginner" states: "It is quite small," which is somewhat indefinite. We have planted smilax from 2-inch pots about the middle of September, and most of the strings were ready to cut in December. The balls of earth in which they were growing were a mass of living, hungry roots. The plants were quite strong, considering they were growing in what are popularly known as thumb pots, throwing up vigorous shoots at the base of the plants, and, with the subsequent treatment, moved along rapidly. They should re

ceive abundant supplies of water, at least twice a day during bright days. In a well drained bed, with a porous soil, it is almost impossible within reason to give thrifty plants of smilax too much water. Three essentials to the successful cultivation of smilax are heat, moisture and a rich porous soil. The temperature is not easily controlled during the hot months of summer and fall, but when fire heat is commenced a night temperature of from 60° to 65° is all right, the latter mark being the best when rapid growth is the great desideratum. If "A New Beginner" contemplates selling his product at wholesale, he will find it necessary to harden it off after the strings have grown to the desired length, which is accomplished by the judicious withholding of water, giving only enough to sustain it in a thrifty condition, and by ventilating freely during favorable weather and reducing the night temperature about 10°. E. L.

The American Carnation Society.

In order that there may be no confusion, it will be well to have it understood by the growers of seedling carnations, that the registration adopted by the S. A. F. is not intended to and does not conflict with the registration method of this society.

Most growers have fallen into line, and when they have a variety that will be introduced to the trade or grown commercially they have it registered. Those who have not should do so at once. The cost of one dollar, which covers all the expense of registering a name, is simply a well invested dollar in the way of advertising, as the name and description are both printed in the report and in the trade papers, through their courtesy to the society. In addition to this free advertising, when the name is registered with this society it is recognized by the trade everywhere as an official matter.

When it is not registered the grower is more than likely to take up the name of some variety that has dropped out of existence, and this causes confusion with the old variety and is often a hinderance to the sale of the new. The American Carnation Society is now at work on a re-arrangement of the list of all carnation names to date. They will be in alphabetical order and easy for reference. As there is something like a thousand names the seeker for a new one can readily see how important this list will be to him. This list, with blank for registration, will be sent to all members of the society and to any others who ask for it.

This society anticipates a very successful meeting in Philadelphia next February and will have the most attractive premium list ever offered in this country for carnations. In addition to the money premiums there will be offered several handsome cups. One of these, given by E. H. Michel, of St. Louis, Mo., will cause some lively competition. There will also be a valuable cup offered for the best arrangement of carnations by a retailer. A host of other good things are in store for carnation growers, further particulars of which will be given when arrangements are completed. Suggestions for the good of the society, special premiums, etc., are always in order and the secretary is ready to receive them at all times.

CERTIFICATES.

Under date of September 5, the officers of the society mailed the following to its members: "In order that there may be no misunderstanding regarding the awarding of the certificate of merit, this card is sent you at planting-in time, to remind you that it takes fifty blooms and *a plant* taken from the bench in which the stock is growing—and that the variety must have been bloomed not less than three years to secure a certificate of merit.

A preliminary certificate is granted to varieties if twelve blooms are shown, and the variety need not have been bloomed three years, neither need a plant be shown"

ALBERT M. HERR, Sec'y.
Lancaster, Pa.

Cincinnati.

BUSINESS BEGINS TO BUSTLE.—THE GRAND ARMY TAKES POSSESSION OF A CITY.—DEATH OF MRS. MAGRIE.—RUDOLPHS RETURN FROM GERMANY.

The past week has been quite an agreeable surprise all around and actually was a reminder of the busy season. Our city is at present flag-bedecked and flower-festooned, and the familiar blue uniform with its brass buttons and the bronze star and ribbon of the Grand Army are to be seen everywhere upon the street. Originality in decoration seems to be the aim of all the business houses. The boys are getting ready for the great parade, and a company of hustlers such as F. Ball, C. Jones, J. Baer and others will commence on that wagon which has occasioned so much talk among the florists.

With much regret I report the death of Mrs. Geo. Magrie, of College Hill. Mrs. Magrie has been a resident of that suburb for over thirty-five years, and leaves a son and three daughters, all of whom are connected with the business. She was buried September 4 at Spring Grove, and the pall bearers were selected from old friends among the craft. The deceased was 65 years of age and highly respected by all who knew her.

Mr and Mrs. Max Rudolph returned from their trip to Germany Saturday last.

Some excellent lilies of the valley twelve inches long are coming in from the well known firm of George & Allen.

Mr. J. T. Conger, formerly of Barnesburg, O., has removed and is now located at Hartwell, O. H. SCHWARZ.

SEYMOUR, IND.—M. A. Barick has purchased the greenhouses and stock of Wm. Meseke.

ELMIRA, N. Y.—The Elmira Horticultural Society has decided to hold a chrysanthemum show in November.

KANSAS CITY, MO.—A. Blankenfeld has moved his place of business to 3824 Main street and has put up three modern houses each 20x100.

WILLIAMS BAY, WIS.—Frank T. Manahan has leased a new and very desirable site for the greenhouses of the Williams Bay Floral Company.

MANCHESTER, MASS.—Mrs. Clarke, wife of J. W. Clarke, gardener to H. L. Higginson, and mother of J. W. Clarke, Jr., gardener to J. E. Thayer, Lancaster, died August 24, of heart failure.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

Every paid subscriber to the AMERICAN FLORIST for the year 1898 is entitled to a five-line want adv. free to be used at any time during the year.

THE SEED TRADE.

AMERICAN SEED TRADE ASSOCIATION.

EVERETT B. CLARK, Pres.; JOS. A. BOLGIANO, 1st Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

AUG. RHOTERT and Mrs. Rhotert returned September 2 on the Augusta Victoria from a ten weeks' European trip.

EUGENE SCHAETTEL, of the firm of Vilmorin-Andrieux & Co., Paris, France, will arrive in New York September 18, on the Normandie.

VISITED CHICAGO: James O'Neill, of Landreth & Sons, Philadelphia; W. J. Langbridge, representing Jerome B. Rice & Co., Cambridge, N. Y.; W. M. Clair, Jr.; J. E. Northrup.

E. CURRIE, of Currie Bros., Milwaukee, was in Chicago last week, lately returned from a month's sojourn in Dakota; he intended spending a week in La Salle county.

A NORTH CAROLINA tuberose grower reports the bulb crop looking well. Rains have been frequent, so much so that they can now be dispensed with. A fair proportion of extra sized bulbs may be expected. Caladium fields are also looking very fine.

COLUMBUS, O.—On September 4 W. Donnan Livingston died of typhoid fever after an illness of four weeks. He was a member of the firm of A. W. Livingston's Sons and had a host of friends among florists and seedsmen, as also among the leading business men of his home city. He was 45 years of age and leaves a wife and two sons to mourn his untimely death.

Long Island Reports.

MATTITUCK, L. I., August 31.—The seed crops of Long Island this year are very disappointing and unsatisfactory. Excessive rains during the early spring were followed by a severe drought during June which prevented the seed from filling well. This was in turn followed by a period of excessive rains which extended through the harvesting season and made it impossible for growers to secure their seed crops in good condition, a considerable part of that actually grown being wasted and spoiled on account of continuous wet weather. Taken altogether, there is not more than half an average crop here and the smallest one harvested for more than ten years. J. M. LUPTON.

Order Sheets in Catalogues.

The report which seems to have obtained somewhat general circulation that a ruling has been made by the officials of the Postoffice Department at Washington to exclude printed envelopes and order sheets enclosed loosely in seed catalogues is entirely erroneous. Advices from the Postoffice Department indicate that they can be enclosed and mailed as heretofore. Under date of June 16, 1898, (see U. S. Postoffice Guide for July) a ruling was made excluding perforated inserts or coupons intended for advertising purposes from newspapers and publications mailed at second class rates. This has no reference whatever to seed catalogues.

S. F. WILLARD, Sec'y,
Am. Seed Trade Association.

German Flower Seed Crops.

ERFURT, Aug. 19 and 25.—The weather this season has been abominable. We had no good winter weather. With the early spring came a continuous cloudy and rainy season, delaying planting until the middle of May. June was cold and so was the first half of July, during which month we had to start the fires in the greenhouses. The weather changed toward the end of July, since which time we have had terrible heat. The pansy seed harvest did not begin until about that time.

Stocks, asters, mignonette and most annuals are now in good shape, but are needing rain. The more tender plants, such as portulaca, balsams, etc., are not up to expectation. Owing to the unprecedented heat thus far in August, all kinds have ripened so rapidly that we now hardly know which to harvest first.

On August 25 we had the first rain for some time and it helped the asters materially, as the plants were already wilting. In general, crop prospects may be called good.

Sweet peas will give a middling crop if they can be gotten under cover in good order, although a great many have burst the pods on account of the heat.

J. D. Eisele, of H. A. Dreer, was a recent caller.

LETTERS.

MARTINSVILLE, IND.—H. R. Winn has sold his greenhouses to Charles Lustgarten, of New York City.

HUMBOLDT, KAS.—Miss Irene Heath has built a greenhouse and embarked in business in a general way.

CEDAR RAPIDS, IA.—The barn of I. N. Kramer & Son was destroyed by fire caused by lightning the night of August 17.

NEW BEDFORD, MASS.—The greenhouses of E. C. Sherman have been rented to John Powers, who was recently gardener at the Howland estate.

TORONTO, ONT.—A. Gilchrist was thrown from his carriage by his horse stumbling. He struck upon his head and shoulders and was badly bruised.

THE

Gardeners' Chronicle.

A Weekly Illustrated Journal.

ESTABLISHED 1841.

The "GARDENERS' CHRONICLE" has been FOR OVER FIFTY YEARS THE LEADING JOURNAL of its class. It has achieved this position because, while specially devoting itself to supplying the daily requirements of gardeners of all classes, much of the information furnished is of such general and permanent value, that the "GARDENERS' CHRONICLE" is looked up to as the STANDARD AUTHORITY on the subjects of which it treats.

Subscription to the United States, $4.20 per year. Remittances to be made payable to H. G. COVE.

THE NURSERY TRADE.

AM. ASSOCIATION OF NURSERYMEN.

A. L. BROOKE, Pres.; E. ALBERTSON Vice-Pres.; GEORGE C. SEAGER, Rochester, N. Y., Sec'y.

PHILIP PHEIFFER, the well known nurseryman of Sedalia, Mo., died August 28. He was born in Darmstadt, Germany, in 1835.

CASPER HILLER, of Conestoga, Pa., who had a national reputation as a fruit grower and for many years was prominent in the State Horticultural Society, is dead. His age was 81.

Nomenclature of Hardy Apples.

Commissioners representing the states of Wisconsin, Minnesota, Iowa and South Dakota have been in session at LaCrosse, Wis., for the purpose of revising the nomenclature of the list of standard Russian apples, of which nearly one thousand so-called varieties have been introduced in this territory.

Wisconsin was represented on this commission by Prof. E. S. Goff, of the University of Wisconsin, an authority upon horticulture; A. J. Philips, secretary of the State Horticultural Society; and A. G. Tuttle, of Baraboo, whose eighty-three years sit lightly upon his shoulders.

Minnesota's members were Clarence Wedge, of Albert Lea, the president of the commission, who has done more for pomology on the prairie land of southern Minnesota than any other man; Prof. S. B. Green, of the University of Minnesota, and J. S. Harris, of La Crescent, another veteran fruit grower and gardener who has been doing missionary work for apples for more than forty years.

Iowa's members were J. Sexton, of the agricultural college at Ames, who has been for the past twenty-three years the chief assistant of Prof. J. L. Budd, the highest authority on Russian fruits; C. G. Patten, of Charles City, and J. B. Mitchell, of Cresco.

South Dakota was represented by Prof. N. E. Hansen, of the agricultural college at Brookings, the distinguised young horticultural scientist who has been twice to Russia to study the hardy apple in its habitat.

The commission examined hundreds of specimen fruits and photographs and found the names sadly confused. After careful consideration the entire list was divided into fourteen groups, the Hibernal, Duchess, Longfield, Charlamoff, Repka, Christmas, Antonovka, Yellow Sweet, Cross, Romna, Transparent, Anis and Golden White.

The work of the commission will be accepted as authority in the four states represented and its findings will be of considerable importance to nurserymen. As a preamble to their report the gentlemen stated that "The varieties here grouped as members of the same family, while in a few cases differing somewhat in characteristics of tree, are so nearly identical in fruit that for exhibition and commercial purposes they are practically the same and should be so considered."

Buffalo.

UNCHANGED TRADE CONDITIONS.—THAT POSTPONED PICNIC.—PERSONAL JOTTINGS IN THE BISON CITY.

Trade is still on the quiet side. Asters are plentiful now, but the quality has deteriorated owing to dry weather. Gladioli are in market by the thousands and carnations are still in fair supply but not very large. Kasting is receiving some very good Beauties, Kaiserins and Meteors.

Postponed affairs are never as good as the first start, and such was the case with our annual outing. Signs were placed in all stores and greenhouses announcing that we would close at noon Wednesday, August 31, and when we got to the boat we were confronted by about fifty men and the same number of ladies. The ones most expected at the gathering were quite conspicuous by their absence. One of the largest establishments, employing about thirty people, was represented by one $2 errand boy. It certainly is not right to have these outings if men of affairs do not care to go or help them along, and it looks very much as if the same activity will be shown in our chrysanthemum show.

Wm. Scott begins on October 1, under the management of two of our florist bowlers, to practice for that match next August in Detroit. When one challenges any one of the same size, weight and age they want to be in training, so he starts now.

Prof. Cowell attended the convention in Boston of the American Association for the Advancement of Science.

S. A. Anderson returned last week from Stave Island, where he had been for two weeks with the Buffalo Canoe Club, and where, I am told, he also practiced palmistry.

Wm. Benchi visited Rochester and other eastern cities last week.

Palmer & Son propose to be right in it as they are having a new front put in their store which promises to be the most attractive in town.

L. Neubeck, who was with Scott for so many years, is now nicely located at Main and High streets. The firm is Neubeck & Meyers.

W. A. Adams was away for a few days last week to Wilson, N. Y., on Lake Ontario for a camping out time.

J. Wiese, of Washington Market, drove up to Kasting's last week with a wagon that was the admiration and envy of all the boys.

W. F. Kasting returned recently looking well and filled with Colorado air.

Charles Porter, head man for S. A. Anderson, is in New York. Wm. Grever, with W. A. Adams, is also on his vacation, as is Arthur Beyer, the artist at Palmer's.

J. M. Gasser, of Cleveland, was here this week.

The soulful Mott is again with us. W.

STRATFORD, ONT.—Alfred Neal has purchased the greenhouses of R. Clarke. Mr. Neal is a thorough, up-to-date florist, and for many years has had charge of the greenhouses of Angus Rose at Woodstock, Ont.

MARKET CONDITIONS.—CROP REPORTS.—THE OMAHA PILGRIMS.—BUILDING OPERATIONS.—VISITORS.

Trade is slowly improving and stock is of better quality, but choice flowers are notably scarce. The new crop of roses is now coming in, while summer plants are still producing abundantly. Carnations are scarce, especially whites. Gladioli are meeting with fair sales, as are sweet peas and other outside stock. Asters are almost a complete failure and many expressions of "what might have been" are heard on every hand.

Chrysanthemums are looking very fine and a large cut is promised. Carnations and violets are being benched now, having made an exceptionally fine growth this season.

The Omaha pilgrims have all returned, much recuperated mentally and physically and enthusiastic in their praises of Omaha, Brother Wilcox, the exposition and everything in general. The Minnesotans attending the convention were as follows: L. L. May, S. D. Dysinger, wife and son, Aug. S. Swanson, Christ Hansen, A. Lauritsen, James Souden and Alex. Martin, of St. Paul; E. Nagel, Jacob Hartman, Fred Busch, R Wessling, O. Munson, C. Swahn and R. Will, of Minneapolis; Frank Berry, of Stillwater; R. Windmiller, of Mankato; John Wunder, of Winona; C. J. Brooks, of Owatonna; Mrs. A. H. Bunde and Miss Bunde, Miss Lemke and Fred Nusbaumer, superintendent of parks, St. Paul.

Carlsen & Lauritsen are building a new rose house 18x30 feet. This will give them a total of 12,000 feet of glass and one of the neatest places in the city. Their stock of roses for winter blooming is exceptionally fine.

L. L. May & Co. are building a fern house 6x100 feet in size. They have recently cleaned and repainted their retail city conservatory.

Callers since last report: C. H. Joosten, of New York; W. F. Dreer, of Philadelphia; E. E. Uslar, of Niles, Cal.; W. H. Elliott, of Brighton, Mass. FELIX.

Burnt Turf.

ED. AM. FLORIST:—In your issue of July 2, page 1435, "C. B. W." has an article in which he speaks of potting soil and advises the use of burnt turf. We would like very much to hear from one of experience, the best method of preparing this.

G. E.

I am familiar with only one method. Our soil was made in the field where small timber land was being cleared, the roots, small stumps and chips being arranged to dry in piles about four feet high, and the turf thrown over them just as it was dug with a spade, making a mound about eight feet high. The wood underneath was set on fire and would burn for several days. This, of course, made considerable charcoal, but in small pieces. One decided improvement over other soils was the freedom from seeds of weeds. The burning is best done in the field. I think it would pay some one to devote their time on some of the waste land, of which there is so much, and sell the soil to florists in car lots, as it is not practicable for florists in large cities to make this preparation at home.

C. B. W.

Nashua, N. H.

It is conceded on all sides that it is hot, exceedingly so, but autumn is coming, and with the advent of the change in season there will be a corresponding change in business. The outlook is decidedly encouraging.

Geo. E. Buxton reports the best summer trade he has had in years. His field carnations, standards as well as new varieties, look at their best and what is chiefly notable about them is their freedom from rust. Mr. Buxton, by the by, is experimenting upon a hundred and fifty seedlings of his own and from all appearances quite a few will prove worthy of cultivation.

At no time, perhaps, not within my recollection at least, have florists been taxed for new ideas to the extent that they are to-day. Something novel in the way of design work, something suitable for a fallen hero brought home for burial, seems to be the popular demand. To the credit of the florists be it said that they are generally equal to the occasion and will furnish knapsacks, guns, flags and battleships at a moment's notice. The floral designs furnished by August Gaedeke & Co. for the funeral of Private E. H. Gaffney were the first of the kind and the largest pieces ever made in Nashua. Two of these are especially noteworthy. A base of white and purple asters, on the front a wreath and on the sides a crescent and an anchor, supported an immense tablet four by five feet. The tablet was of white asters and Meteor roses, and on it rested a knapsack, blanket roll, gun and cap. The gun was of purple and pink asters, the knapsack of ivy leaves, blanket roll of purple zinnias and the cap of purple and white asters. On the sides of the knapsack were the letters "N. H. V., Co. I." Suspended above the tablets were two cycas leaves and between these a dove holding two ribbons, white and blue. The second design represented the American flag, mounted on a stand three and one-half feet high and three feet square. The stripes were made of red carnations and white asters, the stars of blue asters, the base of tuberoses, lilies, carnations and ivy. A more appropriate inscription than "He died for his flag" could not possibly have been devised by his comrades.

HOMO.

NEW CROP PANSY!

VAUGHAN'S "INTERNATIONAL"

Received the only reward for Mixed Pansies at the World's Fair. It is today better and more complete than ever. It contains the cream of the stock of 10 Pansy specialists. There is no better mixture in existence, as all the florists who saw or used it can tell you. **Price, per oz., $10; 1-2 oz., $5; 1-8 oz., $1.50; trade pkt., 50 cts. (less 10 per cent for cash.)**

VAUGHAN'S "GIANT MIXTURE"

This mixture is specially made up by us from all the separate colors of Giant Trimardeau, the Giant Bugnot and Cassier and several special strains which cannot be had in any other way. If your trade demands large flowers there is no better mixture. **Price, per oz., $4.00; 1-4 oz., $1.25, 1-8 oz., 70 cts., large trade pkt., 50 cts.**

GIANT TRIMARDEAU, Mixed, oz., $1.00; ¼-oz., 30c; pkt., 10c.
"CHICAGO PARKS BEDDING" MIXTURE, oz., $1.00; ¼ oz., 30c; pkt., 10c.
Separate Colors—For price of these see Special Pansy Seed Circular, sent on application.

VAUGHAN'S SEED STORE,

JOHN F. RUPP, Shiremanstown, Pa.

Rochester, N. Y.

The past week may be set down as a fairly busy one, considering the time of the year. Roses have been decidedly scarce owing to the increased demand. All other flowers were quite plentiful, but none too many were in the market for the last few days.

The heavy rains of last week have done some damage to asters, beating down the plants and splashing the flowers with mud; where the plants are mulched with straw or lawn clippings or where they are supported by stakes and string, the flowers are all right, but several of our largest growers suffered severely this time. Carnations in the field are not as strong as they should be, but with the moist and cool weather prevailing lately, they have started into more vigorous growth and it is hoped that nearly all will be in shape for housing. Violets are also rather small, owing to the drought, and here comes the advantage of growing this stock in pots, for all potted plants which I have seen this season are in finest condition and ready to go into the houses at any time.

The new seed farm of Jas. Vick's Sons, in the suburbs of Rochester, was visited last week by about forty members of the craft. The soil there is very light and sandy, and the exceptionally dry season was not very favorable for vigorous growth, still most of the stock has done fairly well and the proprietors will be able to reap a good harvest. A white annual sunflower deserves special mention among their novelties of the year. The flower is large, with a broad dark disk, contrasting well with the very pale straw colored petals; it is not a pure white, but looks so from a distance. Some roses, shrubs, vines, herbaceous and bulbous plants, for the mail trade principally, are also grown in quantity and, though the woody plants have not made very rampant growth, all stock is amply furnished with strong roots and is, therefore, preferable for mailing; large tops are not desirable for that purpose. After the inspection, the proprietors invited their guests to sit in the shade of an old apple orchard, where refreshments were waiting. J. B. K.

WATERVILLE, ME.—The fourth annual meeting of the Josselyn Botanical Society, which was held in this city, was attended by a large number of people and was in every way a most successful occasion. Many papers of interest were read and discussed and field excursions to a number of local points were enjoyed. Officers were elected as follows: President, Prof. A. L. Lane; secretary, M. L. Fernald; assistant secretary, Mrs. M. L. Stevens; treasurer, C. H. Knowlton. This association, which was formed in Portland four years ago has now a membership of about 250.

The MODEL Extension Carnation Support

QUEENS N. Y., Feb. 16, '97.
MR. THERON PARKER, Brooklyn, N. Y., Dear Sir:—I have tested your latest model Carnation Support and am free to say that I consider it the best wire carnation support that I have ever seen. It is quickly and easily applied, and I think will prove very durable, and you certainly deserve great credit for the invention.
Very truly yours,
C. W. WARD.

FLATBUSH, BROOKLYN, N. Y., Feb. 18, '97
MR THERON PARKER, Dear Sir:—Your wire stake is certainly a gem Without hesitating we indorse it as an up-to-date carnation support. Yours truly,
DAILLEDOUZE BROS.

W. HOBOKEN, N. J., Feb. 18, '97.
MR. THERON PARKER, Brooklyn, N. Y., Dear Sir:—It gives me much pleasure to congratulate you upon your success in getting up carnation supports. I think that those I have had from you are about as perfect as anybody will be able to make them They certainly fill my bill for an ideal carnation support, a thing I have been looking for for a long time. Wishing you every success in the sale of them. I am
Yours truly, E. ASMUS.

Greenhouse Heating.

ED. AM. FLORIST:—How large a steam boiler is required to heat two three-quarter-span houses each 15x65 and 9 feet high, no glass in sides or ends, wood walls, well built, in one of which a temperature of 65 degrees is required, while in the other 55 degrees will suffice? How many runs of 1-inch pipe are required for each? How large should the flow pipes be? We have a power boiler and a large amount of 1-inch and 2-inch pipe which we should like to use. MINNESOTA.

A ten-horse power boiler would be desirable, although in the milder portions of the state one with a capacity of eight-horse power would probably answer. The grate should have at least an area of six square feet for hard and eight for soft coal. One 2-inch main will suffice for each house, and twelve 1-inch returns will be desirable in the warmer house and eight in the other. In the northern part of the state one or two more returns will be necessary in each house, as the above estimate is only sufficient where twenty-five degrees below zero is the minimum.

Providence, R. I.

The first annual outing of the Florists' and Gardeners' Club of Rhode Island was held at Rocky Point on August 10. A goodly number were in attendance, although the threatening weather kept many from participating. The committee in charge gave the members a faultless programme and nothing was left undone to make the excursion a most enjoyable one.

The regular August meeting of the club was held on the evening of August 26 and was unusually well attended. A change of meeting night to the second Thursday in each month was proposed and laid over for one month for final action. It was the unanimous opinion of those present that the club would be much benefited by the change, as the present meeting night brings the meetings too near many holidays. Mr. M. Sweeney, in a very humorous way, told some very queer experiences with the craftsmen with whom he had dealings, and the many pointers that he got that were so misleading. He wished to know the objects of the club and asked some pointed questions that set those present to guessing. The committee on essays promised a rich treat for the coming season.

A word of caution may not be amiss at this time. A young street "fakir" hailing from Bristol, R. I., by the name of John Small, has been "doing" quite a number of growers having a surplus stock. The "fakir" is bad enough anyway, but when he gets his stock on his boasted "doing" system he can afford to undersell any of us and make money at that.

Wm. Hoffman is spending a three-months' vacation in Europe for his health, visiting the home of his childhood.

Charles O'Gren, who for several years has been employed as head gardener for E. J. Johnston, has accepted a like position with the Norwood Floral Company.

E. J. Johnston has given up his store at 171 Weybosset street, but will continue the business at the old stand, greenhouse in Swan Point road. T. J. Johnston, the former manager, will continue the business at the store.

D. MacRorie, W. A. Manda's representative, has been in town a few days.

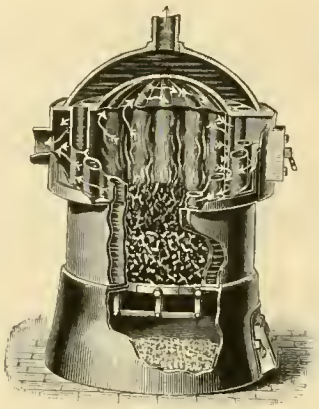
LITTLE RHODY.

Rockford, Ill.

J. J. Soper is building one new house 23x60 for cut flowers.

Carnations are very fine, healthy, free from rust and promise a fine crop this winter.

H. O. Hinkley has two houses already planted with Luxonne violets that are looking very fine.



Business is improving, with every prospect of a good winter trade.

Premiums at the Winnebago County fair were awarded as follows: W. S. Hizer, first on general greenhouse collection; J. J. Soper, second. On floral work, J. J. Soper, first; Mrs. M. J. Cameron, second. On mantel decoration, W. S. Hizer, 1st; N. J. Kraft, second.

Frank Fernback is now with W. S. Hizer and Wm. Melcher with J. J. Soper.

TOLEDO, OHIO.—John Wilson, who for thirty-five years has conducted the greenhouses at 1523 Superior street, is dead. He was in his 79th year.

VAN WERT, O.—The Van Wert Greenhouses, of which W. H. Wagoner is proprietor and J. J. Bolton manager, are preparing for winter by setting a new equipment of boilers.

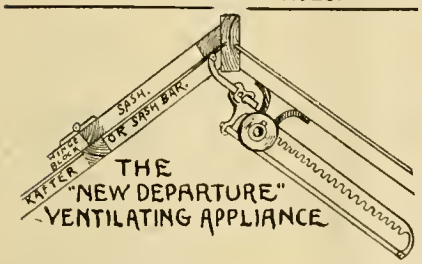
Seabright, N. J.



The summer exhibition of the Monmouth County Horticultural Society was held at the Casino on Rumson Road on August 31 and September 1. It was a success in every way. So well did the local horticulturists respond that some of the exhibits had to be cut short in order to make room for all. In the groups of decorative plants the exhibits were so close in quality that it was with difficulty that the judges decided as to the first premium. The ferns were the finest ever seen here. G. H. Hale was first on decorative plants, adiantums, crotons and caladiums, also on grapes, cut gladioli, perennials and annuals, and second on ferns, and dahlias. N. Butterbach was first on ferns, palms, dracænas, carnations, mignonette and asters, and second on crotons. H. A. Kettel was first on begonias and second on adiantums, decorative plants, palms, caladiums and roses. W. Kennedy was first on fuchsias, geraniums and dahlias and second on petunias, coleus and bouquet. O. W. McIntosh had the best vase of roses and B. Millican the best bouquet. The display of vegetables was superb. There were about one hundred exhibitors altogether. The visitors were mostly property owners and financially the enterprise turned out far ahead of last year. It is expected that the society will have its own hall next year.

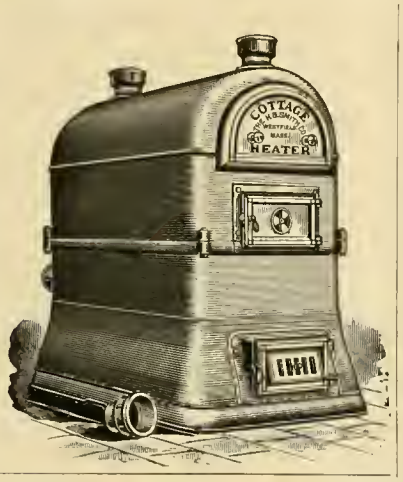
J. D. CARMODY, Evansville, Ind.

The Right Cypress for Greenhouse Material.



Have you heard of Cypress Greenhouse Material that has not been satisfactory? If you have it does not follow that Cypress is not the best lumber to use. There is White Cypress, Yellow Cypress and Red Cypress; there is Cypress that grows on the high lands and Cypress that grows in the swamps.

All of these different kinds are not suitable for greenhouse purposes. Do you know which kind is best and do you know that kind when you see it? If not you would better buy from those that do know and will deliver exactly what they sell. We introduced Cypress for greenhouse construction and pushed it to the front. We know all about it. For fifteen years we have made a specialty of furnishing it, and during this time we have built up a reputation that we can not afford to jeopardize. We send out the best only.

CARNATION PROSPECTS

New York, Philadelphia and Boston.

Reports gathered from various sources indicate that eastern growers of carnations, mainly in the neighborhood of New York, Philadelphia and Boston, will plant for cut flower purposes for the coming season, colors in proportions as follows: Of pink about twenty-eight per cent, of white twenty-four per cent, of light pink twelve per cent, of yellow ten per cent, of novelties and seedlings eight per cent, of scarlet and variegated each five per cent, and of red and crimson each four per cent.

Eighty per cent of the pink varieties planted are Scott; Triumph leads in the remaining twenty per cent and the balance is made up of Mrs. Joost, Argyle, New York, Mrs. Jas. Dean and Oneita. Of the whites over one-half are McGowan and over one-third Flora Hill, the remainder including Alba Superba, Genesee, John Young, Evelina, Nivea and White Cloud. In light pink more than two-thirds are Dayhreak, one-fifth Victor and the balance Mrs. McBurnie. Two-thirds of the yellows are Eldorado and the balance is about equally divided between Mayor Pingree and Gold Nugget. In scarlets over one-half are Jubilee, nearly one-quarter Portia and the rest are mainly Bon Ton, Wellesley, Firefly and and Red Jacket. The leading variegated sort is Mrs. Geo. Bradt, which comprises about one-third of the planting, Lily Dean coming next and then Armazindy and Helen Keller. Reds are confined to Cartledge and Tidal Wave, the former leading, but crimsons are well divided in popularity, apparently, the list including Empress, Iago, Sebec, Maceo and Anna Webb.

It will be seen from this summary that the list of sorts regarded by the growers in question as desirable market varieties numbers about forty but that the great bulk of the planting consists of a very few varieties and these mainly well known favorites, while the varieties of recent introduction are planted sparingly and cautiously notwithstanding the high position given to many of the latter at exhibitions and by general verdict of acknowledged experts. The natural inference is that carnation growers are recognizing the fact that their specialty is, perhaps, more than any other class of plants cultivated for commercial purposes, particularly susceptible to any change of location or environment and no matter how good in its native locality, must be carefully and thoroughly tested under other conditions before being accepted as standard in places remote from its home. Another evidence of the practical tendency of the lessons which growers have been learning from the experience of the past few years is the large proportion of seedlings being grown, ten per cent of the total reports, which suggests that, in addition to the experimental value in growing and testing these seedlings, a good market is being found for the interesting and many hued product of their cultivation. In New York, especially, is it true that mixed unnamed seedlings with good form and stem often bring higher prices as cut flowers than do the best of the standard varieties with their high-sounding titles.

Toronto.

The season has been one of the dryest and warmest we have had to contend with in the history of the city. We have had but half an inch of rain during July, and little more than one inch in August, with the thermometer well up in the eighties and nineties most of the time. Strange to say, in a good many cases the plants have come through this ordeal in very good condition. They are not too large, but good, firm and healthy. Those growers who have attended to hoeing, having it done regularly and thoroughly, have reason to know it was the salvation of their plants, and those who took advantage of early planting have come through better than those who planted late, as the plants were established and received the benefit of a few showers we had early in the season.

We are not very enthusiastic about new varieties. Most of the growers are doing the standard kinds very well and think there is more money in them than in the new ones. Besides, it is expensive work trying new ones which often turn out unsatisfactorily. A few growers purchase the new varieties each season in order to keep in touch with the market, and a few more are enthusiastic in raising seedlings, with what amount of success we shall see later. The new varieties tried here are John Young, White Cloud, Argyle, Empress, Mrs. Joost, Bon Ton, Kathleen Pantland, Mrs. Northway, New York, Cerise Queen and Jack Frost. Those

lifted from the field are looking well. The best grower, however, has been Mrs. Joost, which shows remarkable vigor considering the season.

Among the standard varieties Flora Hill displays the most vigor. This variety has outgrown all the others, making clean, healthy plants of large size. Daybreak is much improved this season and will be grown largely. Scott, Albertini, McGowan, Eldorado, Hector and Portia will be the leading standard varieties. The prospects are for a large increase in space devoted to carnations this season, probably as much as twenty-five per cent. This flower is becoming more popular here each season. D.

Grand Haven, Mich.

Carnations are at their best this year. The weather has been particularly favorable during the summer, and as a result plants are strong and stocky with an abundance of fibrous roots. In walking through our field of new varieties one is impressed with the light green foliage and strong stocky growth of Evelina, which promises to become a leading white. In striking contrast is the rich blue foliage of Empress and Firefly. Empress is showing already the very large flower of richest crimson, carried on an immense stem, which attracted so much attention at the carnation meeting in Chicago, and in fact wherever it has been shown. Firefly is showing a vigorous growth, free from all disease, and the great abundance of flowers and buds proves it an extremely free and early scarlet.

As a group of promising new varieties we find Gold Nugget, the bright yellow, slightly marked with red; White Cloud, a thrifty white resembling Daybreak in habit; Psyche, white marked with scarlet, and from appearance will be remarkably free and early. Passing on we come to Argyle, a pleasing shade of carmine, looking vigorous, then to Bon Ton and Wellesley, two red varieties of much merit, and then to Painted Lady, which is a cherry pink and promises to be a good commercial variety. After these come twenty other new varieties all sent out this year and all possessing good points worthy of extended mention did space permit. Among them are Anna Shaw, Mrs. Frances Joost, Couch Shell, Mrs. Northway, Genesee, Tornado, Red Jacket, Happy Day and New York. Among the novelties of '97, and older varieties, we might mention a few which are particularly successful with us, viz., Flora Hill, a fine large white; Mrs. Geo. Bradt, large variegated; Victor, the deep pink Daybreak; Mayor Pingree, the large light yellow; Freedom, Scott, Jubilee, Meteor and Daybreak.

On the whole our plants never looked better in the field, and of the many varieties recently introduced some, no doubt, will prove valuable and help in the march of improvement. G. H.

Indianapolis.

In spite of the fact that prices as well as demand were most encouraging for the carnation grower in our vicinity, the glass given to this plant has not been increased; neither did our growers invest very heavily in novelties. For white Flora Hill seems to be most in favor. Jubilee is evidently considered the best scarlet, and in pink Daybreak and Albertini still take first place.

Most of our local growers prefer field grown carnations, and, as the weather has been most favorable this season, carnation prospects are very good. The few that planted their houses early with pot grown stock are already cutting a limited number of good flowers, for which they find ready sale. Some rust may be seen everywhere, but as the plants are healthy and vigorous it causes little alarm. One of M. Brandelin's houses is being injured by a dark brown beetle which is a stranger to our local experts. The insect appears in great numbers and feeds on the foliage and buds of the plant. H. J.

St. Louis.

Carnation prospects in the territory immediateiy surrounding this city can be classed as good. At the present writing seventy-five per cent of the plants intended for flowering the coming season are in the houses, many of them having been housed before the middle of August. The principal reason for getting them in so early is that grasshoppers have been busy in several places and seem to have a particular liking for Victor and Alaska, leaving the other varieties severely alone.

Where early planting has been accomplished, success has attended the effort and the plants are growing well. Reports in regard to size of plant compared with the same time last season places them in better shape, from ten to fifteen per cent larger on an average. Strong growing varieties like Scott are in fine shape, coming into the houses with from ten to fifteen heavy shoots. A tendency is noted to get down to the money making varieties, those that cut quantities of flowers. All the places have greatly reduced their lists of varieties, and where the lists have not been reduced much less space is given to varieties on trial.

The growing of Emma Wocher is on the increase, those who had it last season planting more extensively this year, although they say the wholesalers and store men do not fancy it. Whether the increased quantities will at all affect its selling price remains to be seen. The variety in the poorest shape seems to be Daybreak. The growers say the plants will work out of it, but at present they are rather unpromising. Ivory and Alaska seem to be the two whites that are pushing to the front, as they are mainly relied on at several places for white flowers, having pushed McGowan out. Where they are not grown, McGowan is still the favorite white. All indications point to a heavier cut than last season from the territory immediately contiguous to this city. R. F. T.

Kennett Square, Pa.

Plants generally in this section are looking well, although not as large as in some seasons. Most of the growers plant late, the latter part of September and early in October. Some few have already planted, however, and the stock housed is looking well. The older sorts are more generally grown. The bulk of the crop will be McGowan, Scott and Portia, with a very small percentage of fancy sorts. We have most of the newer sorts on trial here. They are housed and look as if they were going to take kindly to our soil, so far as plant growth is concerned. W. S.

La Fayette, Ind.

Carnations have made an exceptionally healthy and strong growth in the field this year. Of the new varieties White Cloud has made very strong and well branched plants, many showing forty to fifty well defined leads, as also do Mrs. S. A. Northway and Empress, while Evelina is not far behind. John Young, New York, Psyche, Painted Lady and Gold Nugget are all strong growers and are heavily branched. Bon Ton, Mrs. Jas. Dean, Argyle and Firefly show good growth, but not so heavily branched as the first mentioned varieties. The experience with new varieties in the field has been very satisfactory.

F. Dorner & Sons Co. had 100,000 plants in the field this year. Their new scarlet, G. H. Crane, shows vigor and proves a good strong grower. A house planted of this variety shows very little effect of the moving and the plants are standing as well as in the field. They have already housed their White Cloud, Flora Hill, Argyle, Mrs. S. A. Northway, Mrs. C. H. Duhme, Jubilee, Gold Nugget, Mrs. G. M. Bradt, Armazindy, Empress, Maceo, Glacier and some other varieties, and will probably finish planting the balance of their houses next week. F. E. D.

Detroit.

Carnations are doing very well in and about Detroit, the rain about three weeks ago having helped them out considerably, otherwise they would have been a poor lot. The growers are just beginning to house them; the weather could not be better for that purpose if it were specially ordered. P. B.

Chicago.

It is generally conceded that carnations in and around Chicago have never been in better shape at this season than they are at present. Particularly is this true in the few cases where the plants have been grown continously under glass, though field stock, with rare exceptions, is all that could be desired. The number of plants grown here this year will exceed all previous records by fully twenty-five per cent. Some growers are of the opinion that the largely increased extent of the plantations will have the effect of reducing the price of cut blooms to a serious degree, but others equally conservative claim that good stock will continue to bring ample returns.

The varieties most extensively planted will rank in about the following order: Wm. Scott, Lizzie McGowan, Portia, Nancy Hanks, Tidal Wave, Jubilee. Of course every grower plants in different proportions but the six varieties named constitute the bulk of every stock although nearly every one is growing other and new sorts to a greater or less degree. It is probable that Scott is planted in greater numbers than any other two varieties combined, but it is an odd fact that one of the largest growers, one who has nearly doubled his plantation this year, has thrown Scott out entirely, growing Triumph in its stead.

Cleveland.

Carnations about Cleveland promise at this time very well. The season out of doors has been better than the average for good, clean, hard growth, and as a consequence the plants, with most of the florists, are of good size and free from disease. There seems so far to be less evidence of rust, even on such varieties as Jubilee, than is usually the case, although, of course, it is impossible to tell what the moving in process, with its attendant heavy syringing and close atmosphere, may bring forth. Some growers have housed their stock, wholly or in part,

and where this has been done subsequent to the hot weather of late August and early September the plants look well. The bulk of the stock, however, is still in the open ground. In some instances the plants are still very small, but this only seems to be the case where the stock was planted very late, or has been grown under other very disadvantageous circumstances. Taken all around, carnations here look well, and failing unlooked for developments, they should make a good showing for the season of '98 and '99, so far as the production of flowers is concerned. A.

Richmond, Ind.

Carnations have done well here this year. The season has been all that could be desired for growing crops, and on carefully prepared ground carnation clumps are in fine shape, clean and healthy. No rust can be seen from end to end of the field, all varieties showing a healthy "bloom" on the foliage.

The great majority of the plants are now housed, and never have they been lifted with so little apparent check. We are all profiting by experience, the most careful attention being given to the preparation of the soil for benches. The plants are carefully dug, protected from wind and sun in transit from the field till again planted, and very carefully and with much exactitude set in the bench.

As to varieties hereabouts, Flora Hill excludes all other whites except White Cloud and Evelina of which we are so sure that we do not feel the large quantity planted is any experiment. All these varieties have made very fine clumps and have lifted nicely, not showing by any sign that they have been disturbed. In scarlets Jubilee occupies most space, with good clumps of trial patches of Wellesley and Bon Ton. In pink varieties, Triumph is leader with Victor a close second, Daybreak in quantity, and a nice patch of Mrs. McBurney. Argyle, Mrs. Joost and several other new pinks are on trial. In yellows, only Mayor Pingree and Gold Nugget have space. In flakes, Mrs. Geo. M. Bradt leads all others, but does not exclude Armazindy which has a place of its own. Besides these are two large houses of seedlings, the majority of them in their third year's trial. E. G. H.

A Fine Field of Carnations.

These 70,000 plants were set out the first two weeks in May between the showers so prevalent at that time in Philadelphia, there being twenty-one rainy days in the month. The soil had been manured and ploughed up last fall and this spring and afterwards a sprinkling of lime and wood ashes was harrowed in. A small portion not treated with the lime and ashes did not show such good results. Once a week the plants were gone over and trimmed into shape by pinching out the long shoots. Before the first of September the most of the plants were housed or sold to others for forcing. The varieties were Evelina, Triumph, Empress, Flora Hill, Mayor Pingree, Victor, and a few of Scott and McGowan. Melba, a new pink formerly called Elizabeth, forms a good part of the stock. The field is on the place of Robert Craig & Son, and the illustration is from a photograph taken the first week of August. K.

SUPERIOR, WIS.—Misses O'Sullivan & Fogarty have opened a flower and confectionery store at 1428 Tower avenue. It is a new departure for Superior.

Cultural Notes.

September 17.—Some growers follow up a house of chrysanthemums with carnations and this can be made very profitable providing the carnations are handled to give the best results.

We will assume that the house will be ready some time between November 15, and December 1, and the carnations, in order to give a crop for the holidays, will have to be somewhat specially prepared. It is well to understand, in the first place, that carnation plants that are brought in after the chrysanthemums and expected to make a crop of flowers for Christmas should not be used for propagating purposes.

They should be left in the field as long as possible without danger of frost catching them, but a frost will affect the flow of sap and thus give them a check that will be felt for some time.

SEVENTY THOUSAND CARNATIONS IN THE FIELD.

When you take the plants up select a cool, cloudy day, if possible, and use just as much care in taking them up as you would if you were planting in the house direct. Shake or wash nearly all of the soil from the roots and pot them into 4, 5, or 6-inch pots according to the size of the plants and the amount of roots they have. Avoid the necessity of repotting them and at the same time have a pot large enough so that they can not possibly become root bound.

In potting them use soil just as rich as you think the plants will stand. The best fertilizer you can put into soil for this purpose is some well rotted manure. As an overdose is apt to injure the root action of the plant it is well to be on the safe side and use not over one-third manure and two-thirds ordinary loam. Your regular potting soil would also answer the purpose but it is hardly necessary to use it if you can make up another just as good. At the time of potting cut out any malformed branch or other irregularity and then take a short stake and tie the plant to it loosely; the only object of the tie is to have the plant grow erect. After potting they should be set in a frame or a cool house. In placing them do not crowd. They should be syringed well three times a day, shaded heavily and kept from a direct current of air for the first week.

As soon as they are well established let them have all the sun and air possible during the day and if there are any warm nights through October, let them have some air after night. See to it that they at no time suffer for lack of water and if you find they can stand a little more feed give it to them in the shape of liquid stimulant.

They should be topped right along to within a month of the time you intend to plant the house; that is, topped with discretion. Some varieties will require closer topping than others. The object is to have a good set of buds and blooming shoots on the plants December 1, so that these can be, by a little manipulation, brought in for Christmas.

It is better to have them growing rather cool up to within a few weeks of the time you want to plant the house, then they can be kept at a temperature of about 50° at night and if you find it necessary to hasten their blooming you can increase this to 60° after they are established in the house.

The treatment in the house will be identical with any other house of carnations except that the plants will require a little extra food and heat in order to give results for the holidays.

In selecting varieties for this sort of culture you will want such as are quick in coming into bloom, have good stems and an extra good calyx. There would be no use in taking a variety that has any tendency to burst its calyx, for the extra feeding would give such a large percentage of bursted flowers that the variety would be profitless, and a weak stemmed variety would not stand the extra heat that it may be necessary to give to get the full benefit of them for Christmas.

Flora Hill is a good white for this purpose because it is such a quick bloomer and can be had set with buds so that it need not be put in the warm end of the house. It will stand lots of feeding and a temperature of 55°, but much above that will weaken the stem.

Triumph is the ideal pink for this purpose as it can, with a little manipulation in the way of topping, be made to produce a regular crop and, with liberal feeding and a temperature from 50° to 60°, can be brought into full flower

within three weeks and without a bursted calyx or a weak stem in the lot.

Amazindy is a good one on account of its freedom of bloom and its perfectly sound calyx and stiff stem. It will stand considerable stimulation but too much heat will make the flowers a bit soft.

Buttercup, properly handled, is also an ideal sort for this purpose and as it is the finest yellow we have it commands a price that helps swell the receipts from the house. There would be no use in attempting anything with small plants of this variety.

There are, of course, other varieties that will give good results and possibly others adapted to this sort of culture will come into the market this season. A little observation will enable you to select your sorts for another season and if you expect to be successful as a carnation grower you will have to be constantly planning ahead and keeping your eyes and ears open. ALBERT M. HERR.

Mr. Herr's Theory.

I am glad to see that Mr. Herr is frank enough to admit that his statements about indoor carnations running out were all guess work, although he repeats the statement in a positive way again in last week's article.

Now Mr. Herr is a very nice young man, and has shown much ability and been very successful, but there are a few things that we grey-headed, old-time, back-numbers have learned that may be of benefit to some of our younger friends. One of the most important of these is not to be "too previous." It is not well to too strongly emphasize our theories until we have tested them in practice, else we quite frequently will be confronted by the disagreeable necessity of owning ourselves in the wrong.

Especially should the writer for the public be careful to label both his theories and his facts, and not get the labels mixed, otherwise some unfortunate is likely to mistake some of the theories for proved facts, and suffer for his mistake. I have never personally grown carnations indoors through the summer, but have kept careful watch of how they do with a friend who has been experimenting for some time; and, from what I see, am almost certain Mr. Herr is all wrong in what he guesses about it. He says they are subjected to a degree of heat that is entirely opposite to their requirements, which can be verified by microscopic examination. This seems to be labeled a fact, but I think it is not true to name. Has Mr. H. examined them microscopically, or does he know anyone who has? And if some one has done so, and found a decided difference in structure, what reason is there to suppose that such a difference may not indicate an improved condition of the indoor plant instead of a deteriorated one? As for me, when I see indoor plants growing like weeds, the pictures of perfect health, surpassing outdoor plants of the same propagation in every way, I wouldn't give the snap of my finger for forty-seven microscopic analyses by forty-seven different microscopic experts. (What follows, Mr. Editor, I would like to have labeled "theory" with a 12-inch label.)

This idea of having a house of carnations grown cold and not allowed to flower, for propagating, is all bosh from start to finish. It is diametrically opposed to Mr. Herr's "fundamental law of the survival of the fittest." I am afraid Mr. Herr has not stopped to consider carefully what the "fittest" is. My idea is that the fittest carnation plant is that plant in the most perfect health and vigorous growth which is producing the greatest number of the largest, finest formed, best colored, and longest and strongest stemmed blooms. That is the plant I want my cuttings from, only not too many from one plant, and it is by taking cuttings from just such plants as these that a variety is bred up, and it is by taking cuttings hit and miss from all the plants in a house without knowing definitely about the quantity or quality of bloom each one will produce that a variety is bred down. Given healthy plants and a careful grower the progress up or down is slow, but just as sure as by over-propagation or propagation from diseased plants. The excellent work done by Messrs. Galloway and Dorsett on the violet, recently described in your paper, is a case in point, and the articles on selection in seed growing by Prof. Tracy set these facts forth fully. While the latter were written more especially with regard to seed growing, the fundamental ideas in them apply fully as well to the propagating of plants in other ways, and they should be read and reread by every grower.

Another objection to Mr. Herr's method is that it is almost certain to result in overpropagation, which has done more to ruin the vitality of stock than all the forcing for flowers. If a man is to set aside part of his glass for stock plants from which he can expect very little returns in cut flowers, he will naturally figure pretty closely and not waste any more room than necessary. Suppose he gets a chance to sell a few thousand cuttings or changes his plans and decides to plant a couple more houses to carnations; he is pretty sure to take those extra cuttings out of that same house, even though, as probably will be the case, he has already taken more than he ought.

X.

COMBINATION PLANTS—ARECA AND PANDANUS.

Indoor Culture.

I have been much interested in Mr. Herr's articles on the deterioration of carnations through being grown in summer under glass. We are now well into the third season under glass with one variety and the stock has shown marked improvement each year. This of course is not a sufficiently long time to settle the question beyond a doubt, but it makes one inclined to doubt the correctness of Mr. Herr's conclusions. W. N. RUDD.

A Green Variety.

ED. AM. FLORIST:—I would like to ask whether such a thing as a green carnation has ever been known? I have one which appeared in a batch of some 3,000 seedlings two years ago. The flowers are perfectly green. It is very odd looking and a free bloomer, I have raised many thousands of seedlings, but never saw anything like it before. S. L.

Combination Plants.

Many ways are now resorted to in order to have stock quickly ready for market and by combinations of plants of various sizes of the same kind a year or two is gained. Particularly is this the case with arecas and Kentias, which have been very successfully treated in this way. The graceful cocos is also being potted four to six together and will surely prove a good seller when grown to a marketable size.

The combination of plants of more than one species occurred to W. K. Harris, and for the past few years he has been experimenting along this line with good results. Latanias and arecas make a good combination, the broad leaves of the former coming down and covering the pot. If grown with plenty of light the latanias produce short leaf stems and surround the center plant symmetrically. The same may be said of Kentias and lata-

nias, K. Forsteriana working very well with the latter. The areca surrounded by Pandanus utilis makes a pretty specimen, the leaves of the pandanus falling gracefully over the sides of the pot.

Cocos Weddeliana and Dracæna Sanderiana make a very dainty combination and both being sturdy plants, doing well in the house, should, for this reason, become popular. Mr. Harris has also potted two or three plants of Pandanus utilis together, which have quickly grown into a salable and desirable specimen. In growing single specimens of this pandanus, he selects from young plants those with broadest leaves and every time a larger pot is necessary a number of the bottom leaves are removed and the plant placed quite low in the soil. By this treatment, when an eight or ten-inch pot is reached a beautiful specimen is the result, having broad bottom foliage close down to the pot.

Two latanias grown together have been found to produce a bushy, salable plant in a comparatively short time, and in larger sizes make beautiful symmetrical specimens which have the appearance of being but one plant. Mr. Harris' method of propagating Ficus elastica, that of rooting the branch on the plant, which tops the parent plant, making it send out several shoots and turning it into an even more salable plant than before while the cutting is at the same time going forward, in his estimation, beats all other methods of growing this popular plant. As an evidence of his ability in handling rubbers, he grew in two years from cuttings, plants that brought over $15 each under the hammer at a horticultural plant auction. K.

[One of these branching specimens of Ficus elastica is illustrated in our issue of September 10, page 139.—ED.]

COMBINATION PLANTS—ARECA AND LATANIA.

CHRYSANTHEMUMS.

Cultural Notes.

September 17.—The plants should be kept free from side shoots and suckers and if any roots are exposed on the surface of the beds they should be covered with well rotted manure. Now that the weather is getting cooler give your chrysanthemums an occasional fumigation before the buds are large enough to harbor the black aphis. Last season I noticed quite a number of fine blooms on the market that were literally alive with aphis, the under petals being fairly black with them. Of course the blooms were consequently worthless. Now is the time to prevent anything like this by keeping the fumigator going on every favorable occasion.

The weather we are having, cool and damp nights and not very bright days, is such that we have discontinued syringing the foliage and water the plants entirely at the roots. We are feeding them with manure water at every watering, which is about twice a week, but we go over the beds every day and moisten any very dry spots with clear water. The main point in applying stimulants is to never water the beds or pots when they are dust dry or the plants will absorb it too quickly and burn. Be sure to have the concoction in such a condition that it will pass freely through the soil. On cool nights leave a crack of ventilation so as to maintain a temperature of from 45° to 50° while the buds are swelling. As soon as they begin to show color the night temperature should be held as near as possible at 50°.

Specimen plants require their final tying out now. This is the time that they can assimilate quite an amount of stimulant. Do not stick to one kind, but change it at every application. Most varieties are commencing to show buds but only the main one on each stem should be allowed to remain. The plants should be in a position where they get the full light, with plenty of ventilation to prevent their becoming drawn. C. W. JOHNSON.

The C. S. A. Cup Contest for 1898.

The contest for the silver cup offered by the Chrysanthemum Society of America will take place in Philadelphia October 18 under the auspices of the Pennsylvania Horticultural Society. Contestants are required to exhibit thirty-six blooms in six varieties, the same to be judged by scale D, as adopted by the Chrysanthemum Society, which is as follows: Color, 25; form, 25; fullness, 15; stem, 10; petalage, 10; size, 15. All exhibits should be addressed to Edwin Lonsdale, Horticultural Hall, Philadelphia, express charges prepaid and shipped to arrive not later than the morning of October 18, as all exhibits must be in position ready for judging by 3:00 p. m. There will be no entry fee to contestants or charges for admission to the public.

ELMER D. SMITH, Sec'y.

Bismarck Funeral Designs.

Among the numerous designs made for the funeral of the late Prince Bismarck, according to *Die Bindekunst*, was a beautiful wreath of palm leaves in variety, auratum and speciosum lilies, hydrangeas and fronds of Pteris cretica variegata. This was sent by the German colony in Buenos Ayres, and measured three yards in height.

The German clubs of Brussels gave a wreath one side of which was made up of oak leaves with acorns and the other of bachelor's buttons, grasses and wheat sheaves. Some cycas leaves and Asparagus plumosus composed the background, and the piece was further ornamented with a ribbon in the German national colors.

A Guatemalan colony of Germans furnished a wreath of cycas leaves with a base of candytuft and stocks. It was garnished with auratum and Harrisii lilies, Kaiserin roses and centaurea. In addition to the cycas leaves a number of the magnificent steel blue fronds of Polypodium aureum were used.

A lyre was made of cycas leaves, the frame filled with stocks and strings composed of erica, the favorite flower of Bismarck. Around the lyre was an arrangement of cycas leaves and fern fronds intermingled with lilies and dahlias. At the upper right hand corner was a bouquet of Kaiserin roses and the lyre was crowned with five graceful cycas leaves.

The Germans of San Jose, Costa Rica, sent a wreath of erica, with a margin of Kaiserin roses, resting on a base of large latania leaves. In the center of the wreath stood a cross of stocks and Kaiserin roses, decorated with cycas leaves. A wreath from the Germans of Singapore was made of Kaiserin roses and centaureas, with a bunch of cattleyas fastened to the top and a garniture of cycas leaves. Another wreath of large dimensions was made of oak leaves with a bunch of cornflowers.

The Flower Markets of Paris.

We expect that a good many florists of the United States will visit our great exhibition to be held in 1900. It may therefore not be without interest for them to become a little acquainted with our flower markets, parks and flower shops.

The most important and at the same time oldest flower market in Paris is that called Quai aux fleurs. It was situated last century on the Quai De la Megisserie, which is well known, at least by name, to the leading American seedsmen. At the time to which we refer, it was not the fine thoroughfare it is now, but it used to be the business street of small bird dealers and ironmongers and was therefore nicknamed Quai De la Ferraille.

Regularly constituted in 1799, the Quai aux fleurs has occupied its present location since the year 1809.

The market proper, planted with fine specimens of Paulownia imperials, is bounded by the Prefecture of Police, the hospital known as Hotel Dieu, and the Tribunal of Commerce, near the famous Notre Dame church. It has 168 stalls, each covering an area of about eighteen feet, and the fee per day and stall is 36 cents. The market is held twice a week, on Wednesday and on Saturday.

Persons visiting the Quai aux fleurs after 8 a. m. can hardly form an opinion as to its importance. The covered section as described above is only used during the day by the middlemen, or rather middlewomen. The flower growers or horticulturists occupy the sidewalks extending from the Pont Neuf (new bridge) to the Pont D'Arcole on the left side of the river and from the Pont au Change to the Pont Notre Dame on the right side of the Seine, as also the sidewalks of the bridges themselves.

Nearly 400 stalls are given out to the growers, each measuring three yards by two, for which the city collects 18 cents per market day, the amount to be paid by the month and in advance, together with 8 cents per month for sweeping expenses. Besides the stalls on the covered space and on the sidewalks the city has a third series of places covering 900 square yards on the Quai De l' Horloge, for which the fee is 3 cents a yard per market day.

With its splendid beds of flowers in pots and baskets tastefully arranged along the sidewalks, the Quai aux fleurs is surely one of the finest, largest and most varied gardens that may be seen, and when in full swing, it affords enchanting pictures to the early risers. In ordinary seasons the growers begin to unload their wagons at 2 a. m., but on the eve of a great festival the bustle commences at 6 p. m. on the previous day, and the transactions last all night. It is then that the market is most interesting and ought to be seen with its throngs of porters, costermongers, salesmen and buyers, hurrying to and from their wagons and carts like a hive of bees, of which even the best photo can give but a faint idea. By 8 a. m. the plants must all have been removed from the sidewalks of the quays and bridges, also the wagons, in compliance with the police regulations.

The various festivals give the greatest impetus to the traffic. On the Feast of the Assumption, for instance, the traffic done at wholesale prices amounts to over $100,000 and it requires not less than from 900 to 1000 wagons to carry all the plants to the market. The Quai aux fleurs is reputed to be the cheapest market, and on the festivals it is not uncommon to meet country flower merchants who come from a distance of seventy-five miles to buy the plants they cannot buy at home.

After 8 a. m. the retailers sell their products in the stalls of the covered section to which we have already referred as being the market proper. Here we may, during the market days, find the rich and poor jostling each other. The student who buys some flowers for his best girl, and the shop girl who selects some flower pots to adorn the window-sill of her dwelling room on the sixth floor, are elbowing the poor widow who carries a basketful of petunias, bought with hard earned cash to embellish the tomb of a beloved husband, the inconsolable mother who mourns a dear child, or the holy sister who purchased some flowers to soothe the sick. The fact is that flowers have always been one of the necessaries of life to the French people, in happy as well as in sad circumstances.

Tourists shopping in Paris during All Souls' Day cannot fail to notice the great number of people carrying wreathes and the enormous quantities of flowers taken to the graveyards on that day. The Parisians reverence their deceased parents and friends as much as any other people in the world. This is ample evidence that after all our gay city is not so wicked and not so irreligious as many foreigners may be inclined to believe from hearsay or from what they have read. The writer happening, a few years ago, to stay in New Orleans on All Saints' Day, and paying a visit to God's Acre, was glad to see that the decendants of the French settlers continue to revere the good traditions which have been handed down to them by their ancestors.

At the last meeting of the horticultural society there were exhibited some nice pot plants of the new zinnia, Mignon, resembling in habit and size of flowers Z. Mexicana flore pleno, but of varied colors. Other plants exhibited were cannas Austria, Italia and Alsace, the last kind introduced as a white-flowered variety by a Philadelphia firm. Though not exactly white, of all known cannas it comes nearest to that color and may be the forerunner of a really white variety. Vilmorin sent in a splendid collection of Lemoine's gladioli, including the new bluish colors such as Micromegas, Pierre Loti, Nebulense, Baron Joseph Hulot, Reve bleu, etc., and other fine kinds as La Czarine, Jane Dieulafoy, Julien Gerardin, Professeur Lemonnier, Ferdinand Kejeljan, Eugene Rambert, General Duchesne, Beatrix, Admiral Gervais, etc. A first-class certificate with high commendations were awarded to them. PARISIAN.

ARRANGEMENT OF PLANTS IN PARIS FLOWER MARKET.

WYNNWOOD, PA.—Thomas Kent leaves September 21 to spend a few months at his old home, Sturston, near Ashbourne, Derbyshire, England.

The Canadian Horticultural Society.

The first annual convention of the Canadian Horticultural Society was held at Toronto, September 7 and 8. At the opening session an address of welcome was delivered by Mayor Shaw, who was responded to by Mr. Geo. Vair. The address of the president, Wm. Gammage, of London, was read and adopted as were the reports of the secretary and treasurer.

A communication from the Gardeners' and Florists' Club of Montreal, suggesting that this society should become a parent society for all the Canadian horticultural societies, was read and a committee was appointed to consider the matter, reporting as follows: "It is the unanimous opinion of the committee that this organization should be devoted to the interests of the trade, florists, seedsmen and nurserymen, commercially interested in horticulture exclusively."

At the afternoon session Harry Dale, of Brampton, read an interesting paper on "The Rose," and Colin Campbell, of Montreal, opened a discussion on Dutch bulbs. After Mr. Dale's paper a discussion on "What is the most economical fuel?" took place and many varied opinions were expressed. George Hollis, of Toronto, read an excellent paper on carnations. Wm. Gammage told in a very interesting manner "How to make a flower show pay," but the opinions expressed by those present were diversified. The secretary, Hugh McLean, handed in his resignation, which was accepted.

At the evening session J. H. Dunlop, of Toronto, read a paper by W. Wilshire, of Montreal, upon "Dutch Bulbs; can they be grown at a profit by the retailer?" As upon other matters, the opinions expressed upon this subject varied greatly. F. G. Foster, of Hamilton, said that only Romans, Von Sion and white Dutch hyacinths pay. J. Bennett, of Montreal, thinks they all pay.

On Thursday carriages were provided by the city and the members had a very pleasant drive through the horticultural gardens, Rosedale park, Queens park, the university grounds and College street to High park, where an excellent lunch was partaken of and the usual loyal and other toasts offered and responded to. The members then visited the exhibition grounds.

The city of Ottawa was chosen for the next annual meeting in August, 1899, and the following officers were elected, mostly by acclamation:

Wm. Gammage, London, president; C. Scrim, Ottawa, first vice-president; P. McKenna, second vice-president; A. H. Ewing, Montreal, secretary; Jno. H. Dunlop, Toronto, treasurer.

Colin Campbell was elected to the executive committee for one year to fill the place vacated by Mr. Scrim, and the following were elected for three years: Mr. Muston, of Toronto; Mr. Johnston, of Kingston, and Mr. Bennett, of Montreal.

The members having viewed the trade exhibition in the Horticultural building, a report of the committee thereon was read and adopted, and Professor Fletcher, of Ottawa, delivered a lecture upon "The Diseases of Plants." The proceedings were then terminated for 1898. S. P.

A FRENCH PEDDLER OF FLOWERS.

READING, PA.—The Metropolitan Greenhouses on Fifth street, near the Auditorium, have been leased to Hoskin & Giles.

PARISIAN FLOWER WAGONS.

New York.

THE ANNUAL DINNER OF THE GARDENERS' SOCIETY WAS A BIG SUCCESS.—MEETING OF THE N. Y. FLORISTS' CLUB.—INTERESTING POINTS ON CLUB MANAGEMENT.—BUSINESS STILL DULL.—AUCTION SALES.

People whose business called them within a mile of the corner of Sixty-seventh street and Third avenue, on last Saturday evening must have thought that Bedlam had surely broken loose in that neighborhood. Rolling balls, falling tenpins and shouts from a hundred throats and over and above all the screeching of bagpipes and yells of "Eat 'em up," "Eat 'em up," made a din to which no description can do justice. It was the second annual dinner of the Gardeners' Society and incidentally six teams of ambitious bowlers were striving mightily for the ownership of a handsome ball and a number of trinkets that had been put up as trophies. Philadelphia, smarting under the disaster at Omaha, sent a full team with two men to spare, John Westcott as coach and Charlie Longinette, who was too sick to bowl but whose lungs were apparently in excellent condition. Philadelphia also brought an empty satchel along with them; they took it home full, having gobbled up everything in sight excepting the prize offered for private gardeners only.

The teams were made up as follows:

Philadelphia—Habermehl, G. Craig, Walker, Connor, Kift and Brown.

Orange, N. J.—Smith, Rose, J. Manda, Atkins, W. A. Manda and Grey.

Hoboken—Dietz, Hansen, Wittman, Fischer, Schiller and Brown.

Flatbush—Riley, A. Zeller, Brennan, Schmutz, Mellis and E. Dailledouze.

New York Florists—J. Young, T. Rochrs, O'Mara, Plumb, Bunyard, and T. Lang.

New York Gardeners—Prosser, Brett, MacDonald, Bartholomy, Henshaw and Troy.

At no stage of the proceedings was anybody "in it" but Philadelphia. Two games were played, the aggregate scores being as follows: Philadelphia, first game, 874; second game, 972; Flatbush, 760, 781; Orange, 800, 735; Hoboken, 814, 687; New York Florists, 711, 769; New York Gardeners, 667, 748. Habermehl, of Philadelphia, made the highest average and the highest individual score, 203, thus winning the individual trophies and—what elated him much more—beating Scott's Omaha feat by three pins. Secretary Bartholomy, of the Gardener's

COVERED STALL IN PARIS FLOWER MARKET.

Society, won the private gardener's prize, a pretty little gilt clock.

After the first game supper was served, the march to the banquet hall being led by piper Halliday, of the Caledonian Club, with that lordly strut which only a bagpiper can assume, and with magical effect upon the heels of some of his susceptible countrymen. P. O'Mara, at the request of President William Scott, acted as toast master, but only very brief remarks were in order, all being anxious to return to the alleys. Robt. Kift responded for the Philadelphia visitors, W. A. Manda for Orange, Eugene Dailledouze for Flatbush, C. Dietz for Hoboken, Wm. Plumb for the New York Florists, Samuel Henshaw for the New York Gardeners and Messrs. Leonard Barron, W. J Stewart, Alex. Wallace and J. I. Donlan for the journals which they represent. Altogether it was one of the jolliest times on record and highly creditable to its promoters.

The first meeting for the season of the Florists' Club was held on Monday evening, September 12. The programme was a general discussion and interchange of views as to how to extend the club's influence and increase its popularity. H. A. Siebrecht said that sociability and mutual good feeling should be considered among first requisites of success in such an organization. He believed in encouraging exhibitions and that members should make it a matter of duty to attend the monthly meetings. Sam'l Henshaw assured the officers of the old men's loyalty and sympathy and A. Herrington suggested something in the way of exhibitions of special flowers at each gathering of the club. E. Koffman thought there should be another ladies' night, the last one having been so successful. Louis Schmutz deplored the late defeat of the Flatbush aggregation at bowling. W. A. Manda believed in a greater encouragement of exhibitions and athletic sports and suggested also a ball and elaborate decoration in connection therewith. Harry Bunyard believed a bowling club should be revived and John Morris amended this by the addition of a bicycle club, concluding with a patriotic speech that was much applauded. Messrs. Troy, Roehrs and Burns each endorsed the proposition to start a bowling team. Patrick O'Mara referred to the present prosperous condition of the club, which the secretary assures him is the best in its history. He believes that an exhibition fund could be raised and the income made good use of, and suggested that cheaper banquets, lower dues and more frequent outings might be found desirable. He referred to the prevailing sentiment in favor of inviting the S. A. F. to New York City in 1900 and heartily endorsed the idea, which it is none too early to begin to develop. A. L. Miller believed in direct appeals from the secretary's office to bring in a larger membership. Alex. Wallace advised the installment of a question box and the discussion of practical cultural problems. C. B. Weathered suggested a junior membership at half regular dues for employes of florists, and John Young endorsed the proposition to invite the national society. W. J. Stewart recommended that in organizing for bowling practice the privileges be not restricted to a few but be broadly extended to every member of the club. All the above recommendations were then referred to the board of trustees. Mr. Wallace gave a brief account of his experiences in Omaha, approving the way in which the western people turned out, praising the activity displayed in the meetings by the older members from the east, and spoke enthusiastically of the entertainment that had been provided. Mr. Stewart added a few words regarding the splendid effect of the cannas, oleanders and other horticultural adornments of the Exposition grounds, and then, on motion of Mr. O'Mara, a unanimous vote of thanks was extended to the Nebraska and Iowa Florists' Club for the hospitality and courtesy extended to members of this club and expressing a hope for the honor of reciprocating in 1900. After adjournment several of the members betook themselves to a bowling alley, but the scores they made are discreetly withheld.

Business is still very dull but the weather is cool and bracing and everyone feels like working. Roses are very plentiful and prices low, only American Beauty showing any activity. Carnations are scarce. Dahlias are beginning to come in freely. Rowehl & Granz, at Hicksville, have 25,000 dahlias blooming, many of them seedlings, some being almost identical in form with a chrysanthemum and admirable for cut flower purposes. The first chrysanthemums of the season were seen at E. C. Horan's last week, the variety being Mme. Bergmann.

The New Jersey Horticultural Society had an enjoyable smoker on Monday evening at Decker hall, Orange, which would have been visited by a number of their New York friends if the event had

not been set for the same date as the regular monthly meeting of the New York Florists' Club. A bowling club was organized.

W. A. Manda made an exhibition at the Florists' Club meeting of a very fine collection of bromeliads, also Helenium autumnale superba, a crested and a compact form of Pteris tremula and the new dwarf white Phlox paniculata Tom Thumb.

Cleary & Co.'s auction room is in full bloom once more. Cleary will have a big trade sale at the greenhouses of Julius Roehrs on September 21.

A. L. Marshall showed flowers of a handsome pale yellow, almost white canna at the Gardeners' Club meeting.

August Rhotert and E. V. Hallock are both back in their accustomed places down town.

Chicago.

BRIGHT PROSPECTS ALL ALONG THE LINE.—A BUSY WEEK.—ROSES IN SHORT SUPPLY AND CARNATIONS IN DEMAND.—FLORISTS' CLUB AWAKENS.—PERSONAL MENTION.

It is, perhaps, without reason that the future presents a roseate view, for, while the week has brought an increased demand, the shortage of blooms has been sufficient to account for the advance in prices which has marked the past few days. Still, every grower, wholesaler or commission man and retailer sees in the present brisk call for flowers an indication of an excellent fall business.

Taking all things into consideration, business has been excellent this week. Roses have sold to the last bloom, and, like Oliver Twist, the retailers have cried for more. Beauties of the first quality, of which there are very few, command $3 a dozen, while the common stock, of which there is an ever increasing cut, sells readily at $1.50. The Meteors which some of the growers have sent in this week have been of superior merit and have been considered bargains at 4 cents each. Bride, Bridesmaid, Perle, Kaiserin and Carnot have all been in supply less than the demand for first class blooms. As a rule the rose plants have not yet entirely recovered from the check received from the sudden change in the weather, but it is the consensus of opinion that rose plants never looked better or were set with more buds than they are at present. There promises to be an abundant supply of fine flowers for Peace Jubilee week.

Nearly everyone has had calls this week for more carnations than he could supply. The major portion of the cut is either Scott or Daybreak, but any fairly good blooms have brought $1 per hundred, which is an excellent average for field grown stock. The week has seen nearly the end of the gladiolus and aster crop.

The Florists' Club is preparing for a season of activity, and held a preliminary meeting at Handel Hall last evening. During the winter months the club, which is in a prosperous condition, will meet on the first and third Fridays, and will listen to a series of essays and discussions, and will make bowling a feature of its programme. A number of plans have been discussed to add to both interest and membership, but as yet no definite steps have been taken along any of the new paths suggested.

"Moscow," the Temple florist, has been relieved, to the extent of $1,250, of the abnormal "roll" which he has been credited with carrying. The sporting men who did it are under arrest. They claimed special facilities for investment through wire tapping.

Joseph Singler and Miss Jessie Warden were married on September 15. The groom is the senior member of the firm of Singler Bros., of Morgan Park, and his bride is one of the most charming young ladies of that suburb.

Interest in bowling is increasing with the return of cool weather. Last week Ed. Winterson made the high average, 147, but the Stollery brothers, who are inveterate bowlers, were close behind.

President-elect W. N. Rudd, of the S. A. F., has been at Omaha this week attending the annual convention of the Association of American Cemetery Superintendents.

Arnold Ringier is at home from a six weeks' successful business trip in the interest of W. W. Barnard & Co. He covered the principal cities from St. Louis eastward.

After a stay of about nine days Peter Barr left for Milwaukee Monday evening. He expects to pay a second visit to Chicago in December.

Geo. Scott, of Bassett & Washburn, is wearing his neck in a bandage as a result of a visitation of a brace of "Job's comforters."

The Central Floral Company has this week displayed some beautiful blooms of the new rose, Mrs. Robert Garrett.

Vaughan's big chimney at Western Springs was struck by lightning the night of September 13; damage nominal.

The numerous friends of Burt Eddy will regret to learn that he is ill with malaria in Virginia.

Phil. Hauswirth, Mrs. Hauswirth and Miss Annie Kreitling spent this week in Terre Haute.

Some of the Dutch bulbs received by local growers were found to be decayed or burned in the cases.

Walter Kreitling celebrated the fifteenth anniversary of his business career this week.

The Bowmanville florists and others are agitating a 5 cent fare to the center of the city.

There is considerable activity at present in the way of dining car decorations on the various railroads.

The first violets of the season have made their appearance.

The first bouquet green of the season is now in at Vaughan's.

Among the week's visitors was John Willius, of Danville, Ill.

Boston.

A PLEASANT VISIT TO WELLESLEY.—BUSINESS IN SATISFACTORY CONDITION.—COLD WEATHER MAKES BETTER FLOWERS.—AQUATICS AND OTHER EXHIBITS AT HORTICULTURAL HALL.—VISITORS.

Bailey's Hotel at South Natick opened its doors to another happy party of gardeners and florists last Thursday and the old dining room, which repeated visits have made familiar to the boys, was once more brought into requisition. The host on this occasion was Fred L. Harris, whose invitation to spend the day with him had been responded to by about forty appreciative friends. A couple of hours were first devoted to strolling about the Hunnewell estate, the beauties of which can never be half told, and through the conservatory and greenhouses, where the wonderful resources and skill of America's foremost gardener are so well displayed. To Bailey's Hotel the party was then conveyed in barges and the mental feast which all had enjoyed was supplemented by a material and substantial one. The usual interchange of compliments and remarks both practical and witty followed, under the direction of that model toastmaster, Judge Hoitt. The high privilege and honor of gathering around their much-loved friend of so many years was the theme on every tongue. May his life and health be spared for many more years to the fraternity to which he has added so much lustre.

Business has been gratifyingly brisk here and all feel that a prosperous season is about to be inaugurated. The excessively hot weather has been followed by a continued spell of precociously cool weather with bright sunlight, the effect of which has been to improve the quality of roses and other indoor products and to brace up carnations and other outdoor flowers, so that the stock is much better all around. Lily of the valley is in short supply and the light receipts are readily disposed of, but at no advance in prices over recent rates. American Beauty roses still maintain their position as leaders in popularity, and there is every prospect that they will hold it undisturbed through the coming season, but to bring fair figures, or even to find a buyer at any price, they must be good. Inferior Beauties are the worst kind of dead stock in this market, and this preference becomes more pronounced each year.

On Saturday last Oakes Ames exhibited Cypripedium Gravesiæ at Horticultural Hall. There were also on exhibition interesting collections of herbaceous flowers from W. N. Craig and Rea Bros., phloxes, zinnias, etc., from L. W. Goodell and dahlias from Lothrop & Higgins. In the aquatic section there were displays of hardy nymphæs from L. W. Goodell and Oakes Ames, the latter receiving honorable mention, and H. A. Dreer also received honorable mention for Nymphæa Husteriana.

Visitors in town: A. Wadley, New Brunswick, N. J.; Harry Simpson and S. S. Pennock, Philadelphia, Pa.; Thos. B. Meehan, Germantown, Pa.

Philadelphia.

BUSINESS IS IMPROVING AND THE FALL PROSPECTS ARE OF THE BRIGHTEST.—CARNATION PLANTING.—BOWLING MATTERS.

Business is picking up very slowly, but many familiar sun-browned faces are noticed on the streets and it will not be long before things will begin to move. The cool weather of the past week has improved stock considerably. Rose buds have more substance and are much better in color. Beauties are fast getting into form and at their present price, with the exception of white roses, have the field almost entirely to themselves. Asters are poor, being cut out entirely with some growers, and there is a race on now among the chrysanthemum (we almost forget how to spell it) men as to who will be the first in the market. The stocks are looking well, there being little if any disease. Montmort will be first, with Merry Monarch next, and then the deluge. Let it come, however, for this is to be a great fall, with the Peace Jubilee, then the receptions to the individual big guns, the weddings and incidental affairs, followed by the lovely debutante.

Prices remain about the same, in fact Beauties are now shaded a little. Most of the growers have their carnations housed and report the stock in better condition than usual at this season of the year. Wm. P. Craig, who is becoming quite a carnation expert, says there is an increase

of fully thirty per cent in the number of plants being forced this season for the Philadelphia market. If Mr. Craig's estimate is correct we hope the demand will be found at the close of the season to have kept up the pace, otherwise our small army of fakirs, now almost unmanageable, will surely be in command. Lily of the valley has become scarce all at once. It is not very nice to have an order for it for a week and then when the time comes find out that there is not a spray in sight. This was the situation with some of the stores last week.

The bowling contingent that visited New York last Saturday, on the invitation of the New York Gardeners' Society, were greatly pleased with their trip. Besides a royal good time they were rewarded for their skill by bringing back the trophy of the match. Captain Habermehl was in great shape and saw "Buffalo Bill" three better than his fine score of 200 made on the plains of Omaha, by putting up 203 and then 179, thereby winning the high score and also the prize for the best average. Our friend William says, "Of course we will win in Detroit next year." Well, Billy, you may, but you will know that a team from the Quaker City was there as well as those St. Louis boys, and look out for that rejuvenated New York team. A contest is to be inaugurated soon on the Philadelphia alleys the winners of which, to the number of eight, will be given round trip tickets to the Detroit convention. Each month's average from October until August will be recorded in a contest once a week. The expense will be met by a theatrical benefit. There is no more pleasant way of spending an evening than with a jolly crowd on a ten pin alley; the cost is small and there is fun and excitement from the start to the finish.

David Rust, the general secretary of the horticultural society, wears a smile these days that is at once child-like and bland. It's a boy, the first born, and arrived last Monday. K.

San Francisco.

GOOD SUMMER BUSINESS.—ROSES SCARCE.—CARNATION MATTERS.—ASTERS HOLD SWAY.—CHRYSANTHEMUMS DOING SPLENDIDLY.—NOTES OF PERSONAL DOINGS.

Business has been fairly good here during the past few weeks and nearly all kinds of stock is moving along nicely at fairly good prices for this season of the year.

There is a scarcity of first-class roses of nearly every variety, but the crops from the newly planted houses will soon begin to make their appearance. Some very good Testouts, however, are to be seen and bring a good price. The weather here lately has been very favorable to the growth of young stock and on the whole rose prospects for this winter are excellent.

The replanting of carnation houses still goes on. The average grade of plants being grown is good and stock never looked in better condition, Scott, Daybreak, Flora Hill and Portia are the varieties most extensively planted. Flora Hill made such a good impression on the growers last season that some of them have planted it quite largely.

Asters seem to be the flower at present and very large quantities of them are used daily. Semple's branching is the most popular. The red Semple has taken very well this summer. There are some magnificent new shades of red and pink but they seem hard to hold to type. The large dark lavender is also in much demand.

Chrysanthemums are doing splendidly outdoors and never looked more promising. At the beginning of the planting season things looked rather blue for the growers on account of the great scarcity of water but fortunately the supply was large enough to go around. In some places varieties like Mrs. J. G. Whilldin have begun to show bud and in some cases the flowers are beginning to open. Chrysanthemums are going to be very early this season, much more so than in previous years. The Chinese growers, as usual, have a large acreage planted, but as they grow only a cheap grade of flowers they cannot command good figures. They also have a quantity of violets planted. Violets have all made a nice growth and also promise to be earlier than last season.

Amaryllises are still coming in largely but the price has dropped considerably. Japanese lilies are selling very well. Not many auratums are to be seen, but large quantities of albums and rubrums find their way into the market every day and are nearly all disposed of at good figures. Some sweet peas are also to be had and strange to say the quality is fine considering the season, the colorings and form being all that could be desired. Smilax is growing splendidly and we will probably have enough of this article this winter.

P. A. Kiley, of the Braslan Seed Growers Co., who has been spending the past few months on this coast, has returned to Boston.

It is reported that we are to have a flower store under the Baldwin Hotel. This is probably the finest location in this city.

Chas. W. Beebe spent several days in San Jose last week.

Chas. P. Braslan came up from San Jose during the week.

Mr. K. Domoto, of Domoto Bros., paid a visit to the different growers on his way home from Monterey.

Paul W. A. Grallert, the carnation grower, is busily engaged preparing for this season's trade. His very large stock of carnations is looking very fine. His novelties are also in good shape.

Mr. C. Holbrow is now head gardener for Mrs. Kohl at San Mateo.

Heavy shipments of seed have been going east during the past few weeks from the different seed growers at Santa Clara.

C. C. Morse leaves on his annual eastern trip in the course of a few weeks.

M. Lynch, of Menlo Park, is busily engaged in having his carnation houses replanted. Flora Hill, Portia and Scott are the only varieties grown there. The rose houses are looking very promising as are the chrysanthemum houses.

It is said that John Gilmore is going to start for himself growing cut flowers across the bay. METEOR.

St. Louis.

ROSES AND CARNATIONS ARE IN SHORT SUPPLY.—TRADE IS IMPROVING.—FLORISTS' CLUB MEETS.—CARNATION MEN AND WATER TAKERS CONFER.—JOTTINGS.

The fall in temperature caught many of the rose growers short of stock. They had disbudded rather freely the week preceding, a heavy crop being on, and the cool weather following curtailed the cut to such an extent that stock was short, prices going up to 3 and 4 cents. Carnation men are in the midst of the housing season, and there is very little to be expected from them for some time. A few of the earlier housed plants are being cut from but the indications are that there will be a shortage until the first part of next month. Asters are about over.

The regular monthly meeting of the Florists' Club was held September 12, but owing to the meeting night conflicting with the night devoted to bowling, the attendance was curtailed to some extent. Very little except routine business was transacted, although at one time there seemed to be an experience meeting of carnationists in progress. There was a general inquiry for stock and especially for Daybreak, which seems to to have behaved poorly with nearly all of the growers. Those who have tried growing their plants in pots are enthusiastic advocates of this method, more especially when the varieties are inclined to be indifferent growers in the open ground. A question in regard to the cost of water was broached and elicited considerable debate. The discussion was started owing to the new water works company of Belleville having charged consumers at the rate of 40 cents per thousand gallons on their first bill rendered. This is regarded as excessive by those using large quantities of water.

Richard Frow and Henry Berning were elected members of the club, and the committee having had in charge the transportation to Omaha was authorized to draw on the treasurer for enough to cover incidental expenses of the trip to the convention.

Invitations are out for a meeting of the bowlers, and a few congenial spirits at the greenhouses of Beyer Bros. This is to celebrate the bringing of the Evans cup to St. Louis.

Owing to a strike among the plasterers the St. Louis Cut Flower Company was prevented from moving into its new quarters on time; they expect to be located, however, by the first of the month.

Mr. Ungergagt, of Springfield, Ill., and Mr. and Mrs. Vesey, of Fort Wayne, Ind., were in town last week.

Mrs. Charles Kuehn has returned from her trip to Detroit. R. F. T.

Helpful Reminders.

The leaves are beginning to turn and will be falling. Do not rake them up and burn them but save every one, for there is nothing of greater value for a winter covering or, when rotted, as an ingredient for the compost heap. The fall rains are preserved by the covering of matted leaves, which prevents evaporation and preserves the heat in the soil. Long after the tops have experienced severe cold valuable root action takes place when nature has been allowed to have her own way, and the protecting leaves and grass have not been cleared away. Nature is seldom unsuccessful in her plantings and we cannot do better than to follow her tactics in furnishing protection to the vegetation which remains out of doors all winter. Stop sprinkling your lawns now and let the grass grow long and remain until spring. You will have a far better turf next season.

It is not necessary to have palms in one place and ferns in another. Take a house without a bench, that you can keep up to 60°; place large palms on cedar posts so that the leaves do not quite touch; then on irregular mounds between place your larger pots of ferns. They agree and after a time young ferns begin to grow which can be taken up and potted. You can place large and small plants in the same house and the effect is more pleasing and one less bench to decay. C. B. W.

LABEL dahlias and like stock before frost makes it impossible to do so with certainty.

AN International Horticultural Exhibition is to be held at Geneva, Switzerland, in June 1899.

EVERYBODY knows enough to look out for those early frosts and to house the very tender stock or protect it.

PHOTOGRAPHS of flower beds, etc., can now be taken. If you have something really good and effective, please send a copy.

ECKFORD'S exhibits of new sweet peas in England this season have shown several good ones in solid colors, a fine crimson and a brilliant blue being noticeable.

AN English writer, in a disgusted way, characterizes certain carnation blooms as having petals with a saw edge and says no one would look at them twice. Down in Boston they call the saw edge a fringe and won't look twice at a flower that hasn't it. Funny, isn't it?

"OLD BAKE," as he is affectionately called, has more scores of over 200 to his credit than any other Philadelphia bowler. He made another total of 220 this week. John Westcott, however, holds the club record with 229 and 228, followed by Moss with 224 and Connor with 221.

WHEN frosts approach and dahlias have the stems cut away and are lifted, stand the tubers in a shady place out of doors for a few days, covering at night. Thus exposed they will lose a portion of their moisture and be in better condition to keep well when stored in a box of dry sand. Caladiums can be treated the same way.

International Horticultural Exposition.

The United States Department of Agriculture has received through the Department of State a communication from Count Cassini, Russian Ambassador, stating that the Imperial Russian Horticultural Society will hold an International Horticultural Exposition at St. Petersburg in May, 1899. The United States is invited to take part in the exposition by sending exhibits and special commissioners to prepare the American section. Exhibits of foreign exhibitors duly accredited will not be subject to customs' inspection at the Russian frontier. Privy Counsellor Fischer von Waldheim, Director of the Imperial Botanical Garden at St. Petersburg, has charge of the foreign sections of the Exposition with the functions of president, and all inquiries relative to the Exposition should be addressed to him.

Greenhouse Building.

Lynn, Mass.—Tapper Bros., one commercial house.

Warren, R. I.—C. & G. Barker, one commercial house.

Cleveland, O.—A. R. Teachout, one commercial house.

Torresdale, Pa.—P. M. DeWitt, one house 20x150, one 10x150.

Y., bulbs; Lee, Watkins & Co., Evergreen, Ala., evergreens; Albert Fuchs, Chicago, Ill., plants; Wood & Stubbs, Louisville, Ky., seeds and bulbs; The Richmond Stove Co, Norwich, Conn., heaters; Louisville Spirit Cured Tobacco Co., Louisville, Ky., insecticide; Des Moines Manufacturing and Supply Co., Des Moines, Iowa, boilers; Louis Paillet, Chatenay, nr. Paris, France, plants; William Barron & Son, Barrowash, Derby, England, plants; Dickson's Nurseries, Chester, England, carnations; Cincinnati Cut Flower Co., Cincinnati, Ohio, cut flowers; The Stillwell-Bierce & Smith-Vaile Co., Chicago, Ill., pumping machinery.

Exhibitions.

Beverly, Mass.—The second annual show of the Beverly Improvement Society, was held at the City Hall on September 7. The exhibition was much better than that of last year, but the attendance was not so large.

Melrose, Mass.—The Melrose Amateur Gardeners' Society held their annual exhibition at the Town Hall on September 12. There were in addition to the competitive displays a number of large collections from the conservatories of public-spirited citizens, not for competition.

Winchendon, Mass.—The First M. E. Society gave a very pretty flower show on the afternoon and evening of September 3. The hall was handsomely decorated with booths of evergreen and the national colors.

Lynn, Mass.—The annual exhibition of the Houghton Horticultural Society will take place on September 27 and 28.

Aster Blight.

ED. AM. FLORIST:—Can anyone give me a remedy for this? Quite a percentage of my plants produce abortive greenish flowers or half opened buds. E.

The Aster Disease.

Numerous complaints of a disease which affects asters have reached us, and so far it appears to have defeated all attempts at eradication. The growers in England, apparently, have to contend with similar difficulties. W. P. Wright, of Kent, says the *Gardeners' Magazine*, recently sent some specimens of diseased asters to the scientific committee of the Royal Horticultural Society, observing that growers of asters in East Kent, especially in the Dover district, are in trouble over an aster disease, which destroys thousands of plants. Some go off directly they are put out, others at a later stage. He found small white grubs in the lower part of the stems, and did not feel any doubt that they were the cause of the mischief. The committee stated that in the *Naturalist*, the organ of the Yorkshire Naturalists' Union, there is a paper by the Rev. Hilderic Friend on this subject. The worms in question are of the family enchytræidæ, a group of annelids. Mr Friend discovered a presumably new form in China asters, and named it E. parvulus on account of its minuteness. A full description of the worm is given in Mr. Friend's paper. There is nothing to be done but consign the plants attacked to the flames.

More About Boilers and Pipes.

ED. AM. FLORIST:—I am very much troubled with water in my boiler room and intend to raise the boiler to the surface of the ground. I want to heat two lean-to houses with hot water, one running east and west—back eight feet high, front four feet—the other north and south—back ten feet high, front four feet—with boiler shed at the northwest corner. The ground is all level and I wish to know whether it will work satisfactorily to run the supply pipes along the ridge and the returns underneath the benches, the benches being about two feet from the ground? The houses are sixty feet long. The return would join the boiler about ten inches above the bottom, the latter being connected with a water tank giving about seven pounds of pressure. Would one 2-inch pipe suffice for the supply of twelve 1-inch pipes? G. O.

The water will circulate with the pipes arranged as described, but if 1-inch returns are to be used, as I infer from a part of the question, there will be so much friction that it will not be satisfactory unless the boiler is strong enough to permit of the closing of the system and running it under twenty pounds or more pressure. If the boiler is not intended to carry pressure, fairly good results will be obtained if the boiler can be sunk so that its top will be level with the lower end of the returns, although it would be even better to use 2-inch pipe for the returns. Except under pressure six 1-inch pipes are all that should be carried by a 2-inch main and it would be better not to use more than four. L. R. TAFT.

Adiantums in Rose House.

ED. AM. FLORIST:—I intend to grow Adiantum cuneatum in a rose house (temperature 65° to 68°) and wish to know whether it would be best to grow them in pots or planted out on a bench which is built and prepared for roses? The plants are raised for cutting fronds only. Will rose house soil suit them? J. L.

The rose house temperature as above stated seems high for all roses, excepting possibly Meteor. Night temperature is meant, it is presumed. Adiantums might be grown in the temperature indicated when making their first crop of fronds, but in order to harden them so that they could be used satisfactorily after being cut, the night temperature should be lowered to from 55° to 60°. We prefer to grow Adiantum cuneatum planted out when they are raised for cut fronds only, but the soil should made lighter than

is considered best for roses. This is done by the addition of leaf mold, refuse well-rotted hops, or peat moss, or some other form of peat. My attention was once drawn to a failure in adiantum growing when rose soil exclusively was used in which to grow them. Knowledge as to the positive cause of the failure is not in our possession. It was believed, however, by those interested that it was either the potash or the lime in the wood ashes which was mixed in the rose soil used that caused the plants to droop and in some cases die outright. The plants were lifted in order to save them, if I am not mistaken, and replanted in a lighter compost as above indicated, wherein they are now growing and flourishing to the gratification of the owner. E. L.

Cleveland.

SIGNS OF REVIVAL IN BUSINESS.—GLADIOLUS AND ASTER CROPS AT AN END.—HOUSING CARNATIONS.—CLUB CANDIDATES.

There are some symptoms of revival in the quickening pulse of trade and the week just past was quite busy for this season of the year, possibly owing to the great change for the better in the temperature. People are also returning to the city after the summer's outing, all of which helps a little.

Gladioli and asters are pretty nearly things of the past for this season, only a few coming in now, and they not very good. Carnations, which have been poor owing to the extreme heat, are now of better quality. The early birds among the growers have been improving the opportunity offered by late heavy showers and cool, cloudy days to house at least a part of their stock. Some, indeed, were taken in during the hot spell and where this has been done the plants show the effects quite noticeably.

Lilium lancifolium album is over for the season, while the rose colored one is just about through. They came in well for many things and will be missed. Prices on standard flowers do not vary from earlier quotations. Roses in good quality run about $3 per hundred, carnations about $1, asters, according to quality, from almost nothing to $3 or even $4 per hundred.

A. Graham & Son's new addition is progressing. They are building two houses each 23x125 feet, with a lean-to, running across the east end of the houses, 11x50 feet. The heating will be done by steam from a new boiler house, which is of brick, 25x50 feet. The houses will be of modern style, of cypress throughout, on red cedar posts. They ought to last.

The nomination of officers of the Florists' Club took place September 12, and the election occurs at the next regular meeting. E. H. Cushman and A. Graham are the candidates for presidential honors this time. A.

News Notes.

PEKIN, ILL.—Geo. A. Kuhl is making an Eastern trip and will be away about three weeks

NEW BRITAIN, CONN.—Frank Dietz has left the employ of J. A. Traut to embark in business for himself.

PRAIRIE DU CHIEN, WIS.—Robert Gugler has embarked in business here with one greenhouse.

HARTFORD, CONN.—McClunie's store was burglarized September 4 and $25 worth of property was taken.

SACO, ME.—Alonzo Hill is offering ten per cent to his creditors in settlement of their claims.

LOUISVILLE, KY.—Nanz & Neuner have sued Tom Anderson, a well known young man, for a flower bill of $91.

PROVIDENCE, R. I.—Fairbrother & Wood have discontinued their branch store at 415 Westminster street.

CLINTON, IOWA.—Willis Hansen, who has been employed in the Lyons greenhouses has gone to Monterey, Mexico.

WAUSAU, WIS.—Alfred Leubner has sold his business to M. Philips, who will arrive from Indiana November 15, to take charge.

DULUTH, MINN.—The flower show held the first week in September was very successful. The attendance was large, and 168 premiums were awarded for exhibits.

MIAMI, FLA.—Fred. Dickinson is making a number of improvements at his establishment. He forsees a prosperous season for southern florists

BRIGHTON, O.—J. D. Imlay, the florist, entertained and dined the Muskingum County Horticultural Society August 31. Prof. A. D. Selby read a paper on "Cucumber, Melon and Tomato Diseases and their Prevention."

CHESTER, PA.—Chas. Buzby is making substantial changes in his place of business. The office has been raised to the level of the sidewalk and the greenhouses are being enlarged to accommodate increased trade.

MEADVILLE, PA.—The annual flower show at the Central Presbyterian church, August 25, was one of the best on record. The exhibits were numerous but were largely of an amateur character although August Kruger and the Oakwood Rose Gardens were well represented.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

Every paid subscriber to the AMERICAN FLORIST for the year 1898 is entitled to a five-line WANT ADV. (situations only) free to be used at any time during the year.

SITUATION WANTED—Experienced rose and carnation grower wants situation by Oct. 1st; single; references; state wages. Address
J M. care American Florist.

SITUATION WANTED—By young man for general greenhouse work; several years experience; sober and reliable; references. Address
FLORIST, Gen'l Delivery, Davenport, Iowa.

SITUATION WANTED—By lady of 24 in store or wholesale house. Is a first-class design worker, competent, can furnish good references. Please state amount of salary paid. Address
A S, care American Florist.

SITUATION WANTED—By a thoroughly reliable grower, either private or commercial; capable of taking full charge. Only first-class position desired; best of references; correspondence solicited. Address
70 So. Main St., Sharon, Pa.

SITUATION WANTED—As foreman for a large commercial place. Thoroughly experienced in growing roses and carnations for the wholesale trade; single, 32, (Ohio preferred); salary $40 per month. Address GROWER, care American Florist.

SITUATION WANTED—By a man, 23 years old. Six years experience in large establishment; sober and reliable. Address W F,
Care GARFIELD PARK FLORAL CO.,
1688 W. Madison St., Chicago.

SITUATION WANTED—By a good florist, German, 30 years old, married; grower of roses, carnations, 'mums, etc.; first-class designer. Position, private or good commercial, or in a store; good salesman. Best references. Address
CR. WITTMER, Box 56, Frankfort, Ky.

SITUATION WANTED—By experienced gardener and florist; married; thoroughly experienced in growing roses, Am. Beauty specially; also carnations, 'mums, violets, palms, any kind of fruit; commercial or private place; best references. Address
J. PANLUS, Shousstown, Allegheny Co., Pa.

WANTED—Single man capable of growing roses, carnations and 'mums. Steady place
C. L. BRUNSON, Paducah, Ky.

WANTED—By first of October a German florist; one who is able and competent to work; wages $20 per month and board. Address
B Z B, care American Florist.

WANTED—A good man for palms, ferns, orchids and general greenhouse work; must be competent References required. Address
H. F HALLE, 548 W. Madison St., Chicago, Ills.

WANTED—Young man as assistant in retail florist store; must have a general knowledge of the florist business. Address with references.
H. F. HALLE, 548 W. Madison St., Chicago.

WANTED—Florist who is capable of growing roses, carnations and 'mums; must be first-class and single; state wages wanted with room and board
NICHOLAS AMOS, Crestline, O.

WANTED—Experienced lady for retail florist store, also a man for general greenhouse work; references required. VOLK & STEWART,
472 Milwaukee St., Milwaukee, Wis.

WANTED—At once, a man used to roses and carnations, fire steam boilers and do general work. State experience; wages $36 per month without board. Address WM. KIRKHAM, Maywood, Ill.

WANTED—A first-class rose and carnation grower to take charge of my six greenhouses, must be a worker and single; state wages wanted with board. Address JOHN L. WYLAND, DeHaven, Pa.

WANTED—Assistant foreman who is capable of growing roses, carnations and general greenhouse stock. Wages $40 per month and board. Steady place. Address M I, care American Florist.

WANTED AT ONCE—A good all-round man; must understand growing palms, ferns and pot plants. Only sober, reliable man need apply; state wages. Address L. G. PFUNDER,
427 Washington St., Portland, Ore.

WANTED AT ONCE—Good man to handle hose and general greenhouse work. Good place for the right man. Must be sober. Address with references, etc. C. H. FREY,
1131 O St., Lincoln, Neb.

WANTED—Florist who is capable of growing roses carnations and general greenhouse stock. Wages, with board, $20 per month. Steady place. Reference from last place required. Apply to
O. G. JOHNSON, Kingston, Ontario, Canada.

WANTED—A thoroughly good man for general greenhouse work; potting, propsgating, packing, labeling, etc; Must be a fair writer and well up in plant values. A good chance for a practical florist with some experience, who desires to come South permanently for his health. Fair wages, good climate and neighborhood.
REASONER BROS., Oneco, Fla.

FOR SALE—Four greenhouses, nearly new. Good retail stand. A. CLAUS, Springfield, Ill.

FOR RENT—Two greenhouses to rent to a sober and reliable married man. Address
CORNELIA A. WEBB,
Parkersville, Chester Co., Pa.

FOR SALE—On account of poor health, one of the best places in Northwestern Ohio; houses new and stocked throughout; will stand investigation. Address BARGAIN, care American Florist.

FOR SALE OR RENT—Good retail stand, 5000 feet of glass (new), has never paid less than $1500 per year net. Must buy stock. Reason for quitting, failing health Address ILL, care Am. Florist.

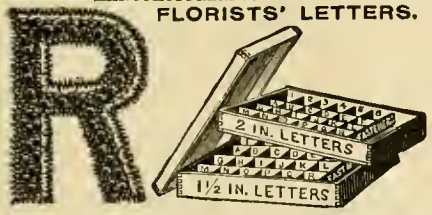
FOR SALE—Three greenhouses; 3,700 feet of glass with good office; city water, telephone and all modern improvements found in an up-to-date place; immediate possession given. Address
H. D. CALDWELL & CO., Paris, Ill.

FOR RENT—To reliable party, 11 greenhouses, 16,000 ft. glass, newly rebuilt last year; also store, 7-room house and barn. Business established 15 years. Finest location in Chicago. Or will sell greenhouses separate. Cause, poor health. Address
GARFIELD PARK FLORAL CO.,
Mrs. Decker, Prop. 1688 W. Madison St., Chicago.

FOR SALE!

Three greenhouses with fine office and retail trade in cut flowers. Houses all new; two lots 72x132, in best residence part of city of 5000. Nice transient trade. Houses stocked with best roses, carnations, etc. Must sell on account of other business. Will sell at a big bargain for cash, or part cash, balance to suit. Investigate. Address
H. R. WINN, Martinsville, Ind.

FOR RENT



A florist's establishment consisting of five greenhouses, dwelling and stable; all in first-class order; situated in Frankford, Phila. Apply to

JACOB PRINCING,
Torresdale, Philadelphia.

THE SEED TRADE.

AMERICAN SEED TRADE ASSOCIATION.

EVERETT B. CLARK, Pres.; JOS. A. BOLGIANO, 1st Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

H. CHEESMAN, traveler for the Braslan Seed Growers Co., has returned from his California trip.

ALBANY, N. Y.—The firm of Price & Reed was dissolved September 1, the business being continued by George H. Price.

BISMARCK, N. D.—O. H. Will is rebuilding his seed store and building a new residence.

GEORGE GIBBS, of Orcas Island, Washington, has received an order from Holland for white iris (I. Anglica) seed.

H. W. BUCKBEE, Rockford, Ill., was a Chicago visitor on Tuesday; also J. Sproule, San Francisco, eastward bound

E. V. HALLOCK returned last week from a ten week's trip through Scotland, England and France. His family remain for the winter.

LOUISVILLE, KY.—C. F. Wood and W. P. Stubbs, formerly of the firm of T. W. Wood & Sons, Richmond, Va., have opened a store at the corner of Brook and Jefferson streets, where they will carry on a general seed and bulb business.

Government Seed Distribution for 1899.

Printed proposals were sent out by the the Secretary of Agriculture under date of August 30. We give below the list, which is accompanied by a circular showing the standards of purity and germination required. A similar circular was reprinted in our issue of May 21, page 1270.

Furthermore, it is the intention to have all the work of putting up the seeds and distribution thereof, done in the city of Washington, D. C., and the contractor will be required to furnish a safe and convenient building for carrying on the work in accordance therewith.

All bids must be received at the Department not later than the fifteenth day of September, 1898. The very short time of fifteen days given to prepare estimates for such an extensive contract, and to secure economical and suitable buildings in Washington would make it difficult for those not supplied with advance information on these lines, to bid intelligently and with any prospect of securing the award.

Made his spare!

Many have taken advantage of my last week's offer and are happy in having made a good trade. It counts at the end of the game. Don't miss this chance of money-saving which I again offer this week; you can buy these later, but not at so low a price for the quality. **TOBACCO STEMS**, fresh and strong, baled and delivered to depots here at **$8.00 per ton**; half ton lots at same rate. **LEAF TOBACCO DUST**, the genuine article (not ground stems) $3.00 per 100 lbs. (10-lb. trial bag 50c). Remit by check, P. O. O., Express M. O., or Reg. Letter. Stamps taken for small amounts.

THE
Gardeners' Chronicle.

A Weekly Illustrated Journal.

ESTABLISHED 1841.

The "GARDENERS' CHRONICLE" has been FOR OVER FIFTY YEARS THE LEADING JOURNAL of its class. It has achieved this position because, while specially devoting itself to supplying the daily requirements of gardeners of all classes, much of the information furnished is of such general and permanent value, that the "GARDENERS' CHRONICLE" is looked up to as the STANDARD AUTHORITY on the subjects of which it treats.

Subscription to the United States, $4.20 per year. Remittances to be made payable to H. G. COVE.

OFFICE:—
41 Wellington St., Covent Garden, London, England.

MÖLLER'S
Deutsche Gärtner-Zeitung

The most widely circulated German gardening journal, treating of all departments of horticulture and floriculture. Numerous eminent correspondents in all parts of the world. An advertising medium of the highest class.

Moller's Deutsche Gartner Zeitung is published weekly and richly illustrated. Subscription $3.00 per annum, including postage. Sample copies free.

THE NURSERY TRADE.

AM. ASSOCIATION OF NURSERYMEN.

A. L. BROOKE, Pres.; E. ALBERTSON, Vice-Pres.; GEORGE C. SEAGER, Rochester, N. Y., Sec'y.

THERE is one section of the United States in which there is no nursery and that is the Hawaiian Islands.

THE Jackson & Perkins Company believes that the outlook for nursery business is brighter than in some years.

THE Dikeman cherry, a recent introduction, is said to be the latest ripening cherry known. It is black, of the Bigarreau type.

ISIDOR BUSH, whose demise at Bushberg, Mo., occurred recently, was the author of a work on grape culture which reached four editions and was translated into five languages.

A. L. BROOKE, president of the American Association of Nurserymen, reports that statistics show a shortage of a million trees in the apple stock and also a large shortage of peach.

ACCORDING to a writer in the *Gardeners' Chronicle*, severe pruning of the Crimson Rambler rose will frequently cause unsatisfactory flowering and it is stated that it is best to prune very lightly or not at all.

THE attention of the United States commissioners to the international conference now in session at Quebec has been called to the restrictions placed by Canada upon the importation of nursery stock and it is hoped that some concession may be the result.

THE Storrs & Harrison Company thinks that there will be a decided improvement in spring trade and hopes there will be for fall. Because of shortage they anticipate an advance in prices on some lines of stock and expect that the end of the spring season will see stocks depleted more than in many years.

American Forestry Association.

The American Forestry Association was in session at Omaha, Neb., September 9 and 10 with a small attendance. In the absence of President Francis H. Appleton, of Boston, ex-Governor R. W. Furnas presided.

There were a number of papers by prominent men and general discussions were indulged in. S. M. Emery, of Montana, presented the forestry situation in a clear light and the topic was further discussed by Dr. Geo. L. Miller, W. R. Adams, of Illinois, and Prof. Lawrence Bruner, of the state university. Governor Furnas read an excellent essay on "Progress and Effects of Forest Growing," relating what had been accomplished in Nebraska during the forty-three years he has resided in the state. E. F. Stephens, Crete, Neb., read a valuable paper on "Tree Planting in Nebraska." E. D. Wheeler, of Kansas, spoke of the possibility of reforesting arid districts and W. T. Little, Oklahoma, discussed the possibility of artificial forests for prairie windbreaks. Mr. Emory spoke of the relations of forestry and experiment stations, and Henry Michelson, Colorado, read a paper on the relations of forestry and irrigation. Prof. Bruner presented a treatise on insects prejudicial to tree growth.

A committee consisting of Hon. J. Sterling Morton, Dr. G. L. Miller and E. F. Stephens was appointed to confer with the irrigation congress with a view to amalgamating the two societies. Henry Michelson, W. T. Little and S. M. Emery were appointed a legislative committee.

Cemetery Superintendents Convene.

The twelfth annual convention of the Association of American Cemetery Superintendents was held at Omaha, Neb., September 13, 14 and 15. The attendance was about one-third less than that at Cincinnati last year. Many of the old eastern war horses were conspicuous by their absence, the distance, as in the case of the Society of American Florists, evidently being too much for them. All things considered, however, it was a creditable assemblage of earnest men. Some absences from the sessions, on account of the superior attractions of the exposition, again point to the unwisdom of selecting for a convention any city in which there are other features of an unusually alluring character.

President Cressy promptly called the meeting to order at 10 a. m. Tuesday. Prayer by the Rev. Le Roy S. Hand was followed by the reception of new members and roll call, address of welcome by Mayor Frank E. Moores, president's address, reports, etc. Papers were read as follows: "Our Association, Its Objects and What Has Been Accomplished," by O. C. Simonds, Chicago; "Why New Cemeteries Should Adopt the Lawn System," by A. W. Hobert, Minneapolis; "What Trees and Shrubs are Suitable for Cemetery Embellishment," by B. Lawson, Wilkesbarre, Pa.; "The Importance of System in Cemetery Management," by H. J. Diering, Wood Lawn, N. Y.; "Cemetery Records," by Frank D. Willis, St. Paul. Other addresses were made by Geo. H. Scott, Rev. S. W. Butler, M. P. Brazill, Prof. G. R. Chatburn, Wm. Stone, Geo. M. Painter, S. W. Rubee and C. A. Baldwin. Charles Nichols, the father of the organization, sent a paper on "The Pleasure I Derive from Seeing Our Work Expand."

The social features of the meeting included visits to the Lininger Art Gallery, local cemeteries, city water works, exposition, etc. It was decided to have the next convention at New Haven, Conn., and the election of officers resulted as follows: Arthur W. Hobert, Minneapolis, president; Wm. Stone, Lynn, Mass., vice-president; Frank Eurich, Detroit, secretary and treasurer.

Grapes Under Glass.

Reference was made recently in these columns to the grape houses at Whitinsville, Mass., under the care of George McWilliam, whose skill in this and other branches of his profession has often been attested by the highest awards of the Massachusetts Horticultural Society.

On a visit to Mr. McWilliam we learned from him that the vines, which so excited the admiration of the garden committee at the time of their visit, are now thirteen years old, having been started from eyes in the spring of 1885, and planted in May of the same year. The border is all inside, the soil about thirty inches deep, composed of turfy loam mixed with charcoal, old plaster, broken bricks and bone and with good drainage beneath.

The loose soil is cleaned off the borders each year and a top-dressing added consisting of a mixture of soil, fine bone and wood ashes. The vines are started about March 1, and at this time the borders are well soaked and a light mulching of spent horse manure is given. As they begin to move the temperature is gradually increased until by the time they come into flower the Hamburgh house stands at about 65° at night and the Muscat house about 70°. Previous to coming into flower the vines are syringed twice daily. While they are flowering syringing is discontinued, but after they are through flowering the syringe is used again sufficiently to wash off the old flowers, but no more.

From the time the vines start to grow until the berries begin to color a little nitrate of soda is given at each watering, not in quantity sufficient to make soft foliage but enough to give strength that the leaves may better withstand the attacks of fungous diseases or insects. Also from the time of thinning until coloring a little manure water from the stable is given at each watering. After the first fruit begins to color the ventilators, which hitherto had been closed tight at night, are left open night and day, a little crack at first and gradually increasing as the fruit ripens.

Floriculture at the Omaha Exposition.

In almost every part of the grounds at the Trans-Mississippi Exposition evidences of the artistic work of the floriculturist is seen. The central point of interest is naturally in and around the big Horticultural building, which is a wonder of beauty with its turrets, groups of statuary, beautiful Renaissance frieze, gay flags and magnificent columns. It resembles a great white bouquet in its varied lines; but of what avail is this great palace without the architect's collaborator, the landscape artist? The interior of this floral paradise is a realm of harmonies and surprises; splendid palms, ferns in vast variety, and luxuriant specimens of flora from almost every clime, while everything the horticulturist, the floriculturist or the pomologist has produced is exhibited with a richness and beauty unparalleled.

The view from the front of the building is delightful, for everywhere the eye rests on the most picturesque setting of lawn and garden, broad expanse of velvety sward, begemmed with parterres in the most brilliant bloom. Stretching to the south of the big building lies a gem of the landscapist's art, a beautiful park, its curving walks encircling large patches of green lawn diversified by gay beds of bright blossoms, and trees and hedges complete the illusion that nature has been for years compiling this random work. Beds of shaded velvet pansies lying in long narrow beds to the north of the building fascinate the eye, and a wide border of round faced petunias in the violet shades, edged with the many colored coleus makes a pleasing finish. There is a profusion of sweet peas in their delicate coloring, and the beds of geraniums put forth their bright petals not ashamed of the more pretentious display made by their sturdy sisters, the cannas, cacti and yuccas.

But it is not alone in this portion of the grounds that the handiwork of the gardener is found. The luxurious tourist who is traversing the broad lagoon in one of those graceful water birds of Venice, the gondola, sees everywhere about him highly colored groupings of landscape art.

On either side of the broad white steps that traverse the terraces the balustrades are topped by picturesque masses of luxuriant vegetation. Great urns are dispersed here and there upon the green sward, holding their effective groups of cannas, caladiums and pansies, while flowering

vines form a lacy green fret work for pedestal and standard. One is apt to forget that the beautiful blue waterway upon which we are so peacefully gliding is also the work of the landscape artist; it is the crowning artifice by which the work of the architect and gardener is glorified, reflecting flowers and palaces in a panorama of the most varied beauty.

Leaving the water's edge we walk toward the peristyle which lies in its long graceful curve at the east end of the grand court. Here we are confronted by the wonderful gardens which nestle at the base of this colonnade. What an inviting whiff greets us, for here are assembled in the most prolific mingling, roses, flowering shrubs of every habit and hue, graceful blossom-burdened spiræas, drooping with their weight of snow, bright foliage plants which vie with the rainbow in shade and tint, gay groups of bright geraniums softened by the white faces of the golden hearted marguerite. Vines climb the great pillars of the peristyle in a delightful tangle of green lattice work, while a haphazard chaos of willows forms a tangled finish that is entrancing. LYNN CURTIS.

THE AMERICAN FLORIST.

Rochester, N. Y.

Trade has improved materially since the beginning of September and the change in the temperature is driving fashionable people home from their summer residences so that the demand is increasing daily. There is an abundance of flowers in the market, with exception of carnations and roses, but some of the growers will soon begin to cut their first crop from young stock.

Walter Salmon, of Brighton, who grows the best Brides and Maids around here, has been sending good stock to market for the last week or so and his cut is increasing rapidly. The stems are not always as long as may be desired, but he promises that in a few weeks the stems as well as the flowers will be as good as the very best. Three large houses are devoted to roses in this establishment and the plants are doing splendidly.

The chrysanthemums at C. M. W. Suhr's are pronounced the finest in town and he expects to be in with Bergmann before anybody else. All his chrysanthemums are doing exceedingly well and he grows many thousands of them. Quite a variety of stock is grown on the place, and Lilium auratum and L. speciosum has been in bloom there every day since early in May.

At the Kimball Greenhouses, where Geo. Savage is in charge, the orchids are beginning to make a grand show; Cattleya Bowringeana is splendidly in bloom while C. labiata is out in great variety. Specimens of this species are not so very large, but the growths are remarkably strong this year and from four to six leads show on every plant. Lælia marginata in baskets are suspended from the roof in another house and, dwarf as the plants are, they form fine subjects when flowered so profusely as we see them here. Lælia anceps in variety is sending out its long, slender stems and most of the plants have grown into large specimens under the skillful treatment they receive; three or four pure white varieties can be seen here regularly every year. Oncidium varicosum are not all out yet, but they are very beautiful and the size of the bulbs is wonderful. Dendrobium Phalænopsis Schrœderii does equally well here and blooms well and freely. Some of the flowers are very delicately colored while others are extra dark and bright. Dendrobium formosum giganteum is also in evidence and Odontoglossum grande and the Insleyi section are producing grand effects in the little house at the entrance. In spite of all precautions the temperature in the odontoglossum house could not be kept low enough during the hot weather and some of the plants suffered severely, but are now fast recovering. A good many other things are in bloom at present, for the collection of orchids here is one of the largest. I purposely mention only the above because all of these are especially desirable for cutting during the fall months. J. B. K.

Tarkio, Mo.

In the afternoon of September 5, this vicinity was visited by the most severe hail storm on record. Orchards were destroyed, and the pellets were of such size that cattle, hogs and horses were here and there killed in the fields. F. P. Zimmerman lost 900 feet of glass and much injury was done to his stock, while a fine field of celery was completely destroyed, so that his loss was considerable. He will replace the glass at once.

714 Chestnut St.

Philadelphia, Pa.

A trade directory...

is an essential to the wholesaler. He needs it every hour. Not only does it supply him with a complete list of all to whom he should mail his circulars or catalogues, but in a thousand little ways does it save him time and vexation worth many times the price of the handy volume.

This is true of any trade directory, but it is particularly true of the American Florist Company's Directory of the Florists, Seedsmen and Nurserymen of the United States and Canada.

In this trade interests are so diversified and specialized that a life long experience will not acquaint one with even a small part of the information which is here accessible. In the Directory is found not only the name of every dealer, classified by states and towns, with each one's branch of the trade, but all names arranged alphabetically.

Here, also, you find the name and address of every firm which issues a catalogue, 950 of them, with a key telling the general contents of each one's publication.

This and much other valuable information is obtainable in a well printed, closely bound volume of 351 pages which will be sent postpaid upon receipt of $2.

AMERICAN FLORIST CO.,
324 Dearborn Street, CHICAGO.

KENTIAS KENTIAS

We offer fine stocky, cool-grown Belmoreana and Forsteriana that have not been forced in the least and are hardened and will stand shipping and store use, and are extra good value for growing into specimens.

CARNATIONS CARNATIONS

PRIME FIELD-GROWN PLANTS

NEW YORK (Scott x Daybreak). A bright, cerise pink which has proven a very popular and taking color, maintaing its popularity through the season. The color is especially effective under gas or electric light. Habit is erect, strong, vigorous and an early bloomer. Has produced a larger crop than any other variety we have thus far grown. Flower medium to large, good strong calyx and stiff stem, rather stronger than Scott. We consider this our most profitable variety. $10.00 per 100.

BON TON (Portia x Cæsar). A bright warm scarlet flower, medium to large, nicely fringed, rich clove fragrance, perfect calyx, stem so strong as to need no staking. Habit exceptionally strong, resembling Portia. Has proved a good bloomer producing 20 flowers per plant during the season, is very popular on both New York and Boston markets. Is a good keeper and general favorite with buyers. $10.00 per 100.

WHITE CLOUD (Wood x Daybreak). Large, full white flower of excellent form and finish and possesses a strong fruity fragrance. Calyx strong, holding the full flower in good form. Habit same as Daybreak but more vigorous and an earlier and more abundant bloomer. It comes into flower among the earliest, throwing a fine, long, stiff stem from the start and continues blooming throughout the season. Has proven very profitable with us and we unhesitatingly recommend it to commercial growers. $12 per 100.

JOHN YOUNG (Scott x Storm King). Very double, snow-white, deeply fringed, high-built flower, with splendid calyx and strong clove fragrance. Habit erect, vigorous, with strong, stiff, wiry stems. Exceptionally free from disease, and a free and steady bloomer; the nearest to Scott in habit of any white carnation we have grown to date. A fine commercial variety. $10.00 per 100.

C. A. DANA (Scott x Uncle John). Delicate shell pink, erect habit, vigorous, wiry grower, medium to large flower on stiff wiry stems, color very soft and exceptionally pleasing. A splendid keeper, abundant cropper; one of the most attractive pink carnations we have. $8.00 per 100.

WM. SCOTT	$6.00 per 100	HECTOR	$6.00 per 100
PORTIA	6.00 per 100	DAYBREAK	8.00 per 100

Pittsburg.

FLORISTS' AND GARDENERS' CLUB INDULGES IN A MOST SUCCESSFUL PICNIC.—SPORTS AND PRIZE WINNERS.—THE CUT FLOWER COMPANY ENJOYS AN AUSPICIOUS OPENING.—JAMES SEMPLE REAPS AN UNEXPECTED REWARD FOR KINDNESS.

On September 1, the Pittsburg and Allegheny Florists' and Gardeners' Club gave a basket picnic at Ross' Grove. The attendance was good, a large number of the members being accompanied by their wives and families. The day was given up to amusements which were in variety enough to suit all. Geo. Oesterle and Julius W. Ludwig, captained opposing nines on the baseball ground, Oesterle's team winning the game by a score of 13 to 11. The bowling alleys were occupied constantly all day. Ernest Fischer, of Castle Shannon, won the box of cigars, and John Bader, in the men's foot race, won a handsome piece of bric-a-brac. The boys foot race was won by DeForest Ludwig, son of E. C. Ludwig; the prize was a large watermelon. James Semple, of Bellevue, proved conclusively that one Scotchman, at least, knowns how to pitch the game of quoits. Everyone enjoyed the picnic hugely.

The Pittsburg Cut Flower Company, limited, opened for business on the morning of September 1, at 705 Penn avenue, without any flourish of trumpets or formalities; their stock of flowers was good and purchasers and orders were in such fair numbers that the "opening" can be called a success, the venture giving every promise of being a successful one. Their store room is fitted up neatly, with an eye for business rather than to catch the public eye. Mr. Langhans and Mr. Clark will give their whole time to this business, while Mr. Burki, the president of the company, will only devote a portion of his time.

On Wednesday evening, August 31, James Semple, of Bellevue, was visited by a committee of the motormen and conductors of the California avenue branch of the electric road, which runs past Mr. Semple's place. Mr. Gordon, a conductor, on behalf of the men, presented him with a very fine reclining chair for Mr. Semple's many acts of kindness to them, particularly in allowing them free access to his pump, other residents refusing theirs. Mr. Semple replied, stating that he would always regard this as one of the most pleasant episodes in his life, and more especially so as it was an entirely unlooked for attention, never dreaming that giving water would lead to such a return. WHY YOU SHOULD BUY YOUR PLANTS OF US:

1st. Because your order will be filled immediately.
2nd. Because our plants make a great mass of fibrous roots which enable them to stand long shipment well and to start at once when planted.
3rd. Because our plants are healthy and we grow the best varieties.

Send for prices..... GEO. HANCOCK & SON, GRAND HAVEN, MICH.

Chelone Barbata.

This magnificent hardy perennial, although known for a long time, has only of late received the attention it deserves, in fact since the custom of wiring flowers has been abandoned. The plants possess a triple value. First, they are handsome ornaments in the garden; second, they are valuable for pot culture and forcing; and third, the flowers are useful for cutting.

It is not alone the incomparable light red color of the flower which renders the plant attractive, but also the elegant, though solid, character of the spike. The flowers are borne on a long spike and are very durable, and the spikes produce blooms to the extreme tip. The variety C. barbata coccinea is remarkable for the brilliant scarlet color of its flowers.

The plant grows from three to four and a half feet high and produces flowers uninterruptedly from June till September. It deserves to be planted extensively for cut flower purposes, affording as it does excellent material for vases, table decorations, etc.—*Die Bindekunst.*

Worcester, Mass.

A week ago it was so hot that carnation housing waited for cooler weather and now we are all hustling to get them planted before they are frozen. Such are the beauties of our New England climate.

The cool wave has driven the people home from seashore and country and has enlivened trade considerably.

Good flowers are in very short supply and the scarcity of asters, owing to the ravages of disease, is very marked. Palm trade is commencing to start up and there are good trade indications all along the line.

The weekly exhibitions of the horticultural society are fully up to their usual excellence and most of the exhibitors are donating their cut flowers to the various sick Santiago veterans, through the local Volunteers' Aid Society. A. H. L.

HARRISBURG, PA.—W. H. Martin has gone to Cassville to make his home.

Minneapolis.

The horticultural display at the Minnesota State Fair was the largest and best on record. The collection of plants and flowers included almost all classes of stock and dozens of premiums were awarded. A large proportion of the displays were by amateur growers, but the commercial floriculturists were well represented.

Jacob Hartman, Minneapolis, was first on asters, not less than six kinds, and on specimen palms. He was second on carnations, twelve-inch basket of flowers, pyramidal bouquet, hand bouquet, white bridal bouquet, five varieties of climbing vines, five hanging baskets, collection of coleus, collection of geraniums and vase of plants.

John Vasalka, St. Paul, was first on carnations in bloom, second on collection of tuberous begonias, third on vase of plants, collection of geraniums, specimen palms, collection of coleus, five hanging baskets, five climbing vines, bridal bouquet, hand bouquet, pyramidal bouquet, twelve-inch basket, and fourth on floral design.

R. J. Mendenhall, Minneapolis, was first on roses, floral design, twelve-inch basket, pyramidal bouquet, hand bouquet and bridal bouquet, and second on specimen palms.

John C. Fleischer & Son, St. Paul, were first on collection of climbing vines, five hanging baskets, collection of coleus, collection of tuberous begonias, collection of geraniums in bloom and vase of plants and were third on floral design.

Otto Hierskorn, St. Paul, was second on floral design.

St. Paul, Minn.

Christ Bussjaeger has an establishment two years old and his 9,000 feet of glass are fully insured. He grows cut flowers and bedding plants and a few potted plants for his local trade. For roses he grows Beauties, Brides, Bridesmaids, Woottons, Perles and Testouts. His carnations are of the varieties Daybreak, Silver Spray, Lizzie McGowan, Flora Hill, Jubilee, Garfield, Emily Pierson, Rose Queen, Scott and Tidal Wave.

Mr. Bussjaeger has made a success of all of these and of primroses, cyclamen and cinerarias and each year grows an immense quantity of bedding stock, mostly geraniums. He also has a very fine aster but has not been able to grow it in the quantities he desires as disease has killed seventy-five per cent of his plants.

The MODEL Extension Carnation Support

QUEENS, N. Y., Feb. 16, '97.
MR. THERON PARKER, Brooklyn, N. Y., Dear Sir:—I have tested your latest model Carnation Support and am free to say that I consider it the best wire carnation support that I have ever seen. It is quickly and easily applied, and I think will prove very durable, and you certainly deserve great credit for the invention.
Very truly yours,
C. W. WARD.

FLATBUSH, BROOKLYN, N. Y., Feb. 18, '97.
MR. THERON PARKER, Dear Sir:—Your wire stake is certainly a gem Without hesitating we indorse it as an up-to-date carnation support. Yours truly,
DAILLEDOUZE BROS.

W. HOBOKEN, N. J., Feb. 18, '97.
MR. THERON PARKER, Brooklyn, N. Y., Dear Sir:—It gives me much pleasure to congratulate you upon your success in getting up carnation supports. I think that those I have had from you are about as perfect as anybody will be able to make them They certainly fill my bill for an ideal carnation support, a thing I have been looking for for a long time. Wishing you every success in the sale of them, I am
Yours truly, E. ASMUS.

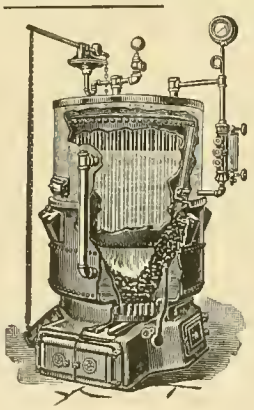
LOCKLAND LUMBER CO.,
Lockland, Ohio.

Erie, Pa.



On September 7, H. A. Niemeyer was made the victim of the well known palm swindle. A man claiming to be in the employ of one of his customers ordered eighteen palms to be sent to the house. He met the driver in front of the house and told him where to take them. As soon as the wagon was gone he delivered them to the people to whom he had previously sold them. The trick was not discovered until the next day, when the driver called for the plants. Fortunately he had sold them all in the neighborhood and Mr. Niemeyer was thus able to find every one and reclaim them as they were stolen property. The people were glad to return them even though they had to lose what they had paid. The trick is so slick when it is worked right that even with the utmost care one is likely to be trapped. The same man tried to get a diamond from a jeweler, claiming to have been sent by another jeweler from a small town near here, but failed.

A. F. J. BAUR.

MUNCIE, IND. — Incendiaries burned Oscar Meek's greenhouse on the night of September 7 and attempted to fire his residence.

TERRE HAUTE, IND.—M. A. Hunt has sold the retail store in the Grand Opera House block to Earle Rippetoe, but will continue to conduct the greenhouses four miles southeast of town, as heretofore, under the management of George E. Hunt.

—THE—

GREENHOUSE MATERIAL
Cal. Red Cedar and Louisiana Cypress.
BEST GRADES. PERFECT WORKMANSHIP.
A. DIETSCH & CO. 615-621 SHEFFIELD AVE. CHICAGO, ILL.

New Bedford, Mass.

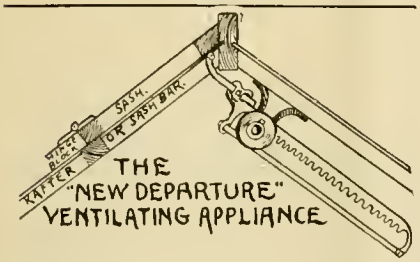
E. Y. Pierce has remodeled his violet houses and has made many other noteworthy improvements about his greenhouses. R. H. Woodhouse has likewise overhauled his houses, putting things in the best of condition.

Wm S. Brown intends remodeling some of his houses, adopting the short span to the south system. A new idea at his place is an electric connection between the boilers and the night man's sleeping room.

The Florence Street greenhouses, which were formerly leased by W. G. Kraber, have been torn down, F. A. Sawle, the proprietor, having concluded to dispense with the place. Mr. Kraber has leased Geo. Brennan's greenhouses and, after overhauling them in a way to suit his purpose, he will be well prepared to do business.

Arthur Ashley, the vegetable grower, intends adding a house which will cover 40x200. As a cucumber grower Mr. Ashley's fame is widespread.

The Gardeners' and Florists' Club will give its annual chrysanthemum show at Adelphi Rink on November 3, 4, and 5. As usual the amateur gardeners will be well represented. HOMO



SEDALIA, MO.—From many candidates John Ahrens has been chosen as superintendent of city parks.

LOUISIANA Cypress Green House Material.

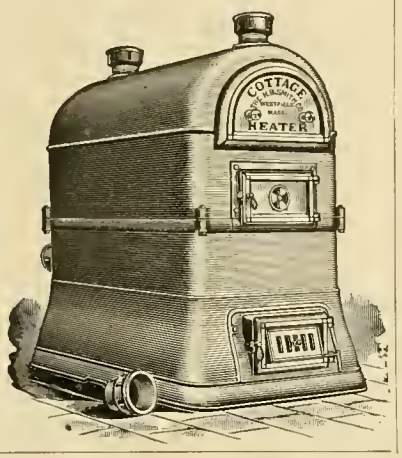
You can not get a *GOOD THING* for nothing. But the price of this apparatus is next to nothing. Send for price and description to



J. D. CARMODY, Evansville, Ind.

Clear Cypress Greenhouse Material.

This *with us* means the best growth of Cypress Lumber and the best grade of that growth; and from this grade all the sap—bright sap, which only experts can detect—as well as stained sap, knots and other defects cut out. Others do not equal our quality if they do beat our prices. It is not hard to see the reason: You can not buy gold dollars at fifty cents each. Experienced growers know that the best is not too good and cheapest in the long run.

ERIE, PA.—E. C. Hill contemplates adding a palm house to his plant and John Trost will build an additional carnation house.

ROSES.

GROWING AMERICAN BEAUTY FOR MARKET.

There are probably no two cultivators of this rose who follow exactly the same treatment and in many cases it would not be advisable to do so. In almost every instance particular classes of soil, different positions of the greenhouses and many other points have to be studied and the treatment for each carried out accordingly. With this particular variety close attention must be given to many such apparently minor details to insure success, and with this in view it is hardly possible to give a system of treatment which all growers can follow to the letter. The first necessity is a good cutting, and the best, I believe, for all practical purposes is one taken directly under a bud which has been produced on a very short growth.

Such buds are of very little commercial value, but the cuttings of this character, if taken when the bud is half developed, will be found in about the right condition to root freely, as they have several eyes usually quite close together. The bottom leaves should be trimmed off so that about two inches of the base can be placed in the sand, and the leaves retained should stand clear of the surface of the cutting bench. In preparing the propagating bench, it should have from two to three inches of clear, sharp sand, pressed very solid. The cuttings root best, I find, over a brick bottom. After the sand is carefully prepared give it a good watering, then with an old knife draw a cut across the bed about one and one-half inches deep, insert the cuttings from one to one and one-half inches apart, according to the strength and size of the foliage. When the row is filled, press the sand very firmly around each cutting, give a good watering with a moderately fine rose to settle any loose particles and follow the same course till the whole batch is inserted. If well watered when first put in, they will only need light waterings about every other day, but should be syringed overhead every morning, particularly if strong fire heat has to be used to carry an even night temperature of about 56° and a day temperature of about 60° to 65°, according to sunlight. If the sun should be bright, a slight shading should be used for four or five hours in the middle of the day till the cuttings begin to root, which should be in from twenty-five to thirty days. February is the best month for propagating this rose.

As soon as the cuttings have made roots half an inch long, they should be lifted very carefully from the sand so as not to break off any, as they are very tender at this stage. Pot in clean 2-inch pots, using a nice friable loam with only a very small proportion of manure. Press the soil into the pots as firmly as reasonable, place on a bench where an even temperature can be maintained about the same as in the propagating house, water lightly and shade from bright sunlight till they have taken fresh root in the soil. The plants may then be given a fair share of light and air on sunny days and as soon as the pots are moderately full of roots a shift into the 3-inch size will be desirable, using the same kind of soil. The new soil, however, should always be as warm as that in which the plants have been growing, cold wet soil having a tendency to give the plants a severe check. These young plants, from the day they are potted till planted in their flowering quarters, should never be allowed to suffer for want of water or be saturated by overwatering. They should also be potted on immediately they need it, otherwise they will get a check in their growth from which it is often difficult to revive them. As the season advances they should have all the air possible, and as it often happens in spring, an occasional night will be quite warm, the ventilators on such occasions should be left a little open. Nothing will give the American Beauty black spot quicker than a close, stagnant atmosphere and this applies through all stages of growth, from the cutting bench till the plants are finally discarded.

Presuming that a house is ready to plant with American Beauty on the first of June, the cuttings that were put in the sand early in February will then be good strong plants in 4-inch pots. The house is prepared by being thoroughly cleaned of all dirt, rubbish, etc., and then burning a good lump of sulphur therein with all the ventilators closed. This burning of sulphur kills all insects which may be hiding in the crevices of the woodwork. After this every piece of the side walls, interior surface of benches, etc., gets a good coat of hot lime-wash. A little excelsior is then laid over the cracks in the bottom of the benches to prevent the soil falling through and the house is all ready for the new compost. This is previously prepared outside, in the manner often described in these columns, and the house filled according to requirements. When this is done the plants are placed in position in rows about fourteen inches apart each way, pressing the soil as firmly as possible about the roots and leaving a slight depression at the base of each plant to insure greater efficiency in watering. The roots will soon begin to spread out through the soil, which should then be pressed very firm, either by tramp-

ing with the feet or pounding with a brick or piece of hardwood, and the surface very lightly raked over to make it even and level. On bright days they are syringed overhead two or three times and watered at the roots whenever necessary. All the air possible is given day and night until the weather gets cold enough to render fire heat necessary.

Six or eight weeks after planting a very thin mulching of fine manure is applied all over the surface, about half an inch thick. As they need it two stakes are placed at each plant and secured to a No. 18 wire stretched the full length of the house and about on a level with the top of the stakes which are of No. 8 wire and five feet long. This keeps each stake in place for the entire season and with the regular routine of watering, syringing, ventilating, tying, etc., is all that can be done till the buds are ready to cut, which will depend to some extent upon the time the market demands them. A house planted at the above date will usually begin to produce flowers, if needed, in seven or eight weeks, but by careful pinching the plants can be made to produce a much better crop a few weeks later, if the first flowers are not allowed to mature. From the time fires have to be started, syringing once on each clear day will be ample and water at the roots as required but continue to give all the air possible at every favorable opportunity. In October, and about every six or eight weeks thereafter, add a very thin mulching of fine manure. When the days increase in length, say February, begin the application of weak liquid manure, if the days are bright, but in continuous cloudy weather this should be withheld, as it forces the plants into growth too vigorous to be useful. Insect pests must of course be kept in check at all times.

JOHN N. MAY.

DEPOSIT ON ROSE LEAVES.

ED. AM. FLORIST:—The enclosed rose leaves are covered on the under side with a new, or previously unnoticed deposit. I at first thought it to be fly-specks, but on microscopic examination find I am mistaken, and would like some one to tell me what it is. The plants from which the leaves are taken were benched from 2-inch pots in April and the glass taken from the house, so they have been exposed to the weather and have made fine growth. The Brides and Bridesmaids are from two to three feet high and show perfect health, though the foliage is not heavy. The buds have been picked off as fast as they appeared to encourage the plant growth. Within the past month I have noticed the deposit on the under side of the older leaves, but have paid no attention to it until the past ten days, when the plants seem to have been checked and such shoots as are coming out are not as strong looking as the former ones. I do not find any of the deposit on the newer leaves. F. P. D.

The samples of rose leaves received from "F. P. D." covered with black spots have all the appearance of being covered through a rich mulching of fresh manure. I know of no other reason for such a spot on the foliage. In putting fresh mulching particularly in warm weather, on the benches, the ammonia rises from the same and condenses and settles on the foliage in a very similar manner to the sample of leaves sent. "F. P. D." does not say whether he has mulched his plants recently, but I am inclined to think he must have done so from the condition of the leaves, or otherwise his soil has a large amount of humus in it, which, in warm, moist weather, would give off a large amount of ammonia, causing the spots to form on the leaves as above. They are certainly not insect deposits in any form. The way to avoid this is to have the manure fairly well composted and add a small amount of dry soil to it before working up to put on the bench. The dry soil will absorb the extra amount of ammonia and store it up for future use of the plants, rather than let it escape out of the ventilators as it often does when the manure is applied fresh without any previous preparation. JOHN N. MAY.

ROSE LEAVES ATTACKED.

ED. AM. FLORIST:—Please name and describe insect that is eating rose foliage, especially on plants grown near buildings; and give remedy for same. The insect seems to eat only at night, as none are ever seen on the plants. I. N.

Samples of rose leaves submitted by "I. N." have all the appearance of being eaten by the larva grub of the leopard moth. This insect is of a light brown color with darker spots over the body and averages about an inch to an inch and a quarter long. It buries itself during the day under the soil as a rule and migrates at night for its sustenance. Or it might possibly be the browner grub of the common brown moth that is seen flying about so much at night just after dark. These insects can always be found early in the season under old boards or any where that the lumber is piled, where they are sure to hide during the day. The larva of these two insects will do practically the same amount of damage to the plants as per leaves sent. Of course I am unable to say which actually does the damage without a sample of the grub to judge from. The only way to kill them that I know of is to take a lantern at night and examine the plants very thoroughly till the destroyer is caught. The ordinary cut worm would also do the same kind of damage. These are a very dark brown with black heads and quite black spots over the back portion of the body and run as a rule an inch and a half long. By carefully turning over any lumps of soil or any loose particles on the surface during the day these can be found as they are then hid away preparatory to their night's depredations. If "I. N." can catch one of these and forward through the mail, I will endeavor to give him its correct name.

JOHN N. MAY.

Hyacinth and Tulip Beds.

By planting Dutch bulbs, pansies or ten-week stocks we add about a month to the beauty of our flower beds and at the time of year when it is most appreciated. Of the Dutch bulbs the hyacinths and tulips are best for this purpose, daffodils, crocus, etc., belonging to places where they can remain undisturbed for several years to form clumps. In submitting designs for beds of hyacinths and tulips, I do not mean to say that this is the best way to plant them, for smaller beds, especially, solid planting with perhaps a plain border looks best, but when a bed is planted with bulbs year after year, it is desirable to use a design for a change. There are so many combinations among so wide a range of colors as we have of these bulbs, that I shall only give a few examples for Fig. 1. In the other illustrations the lining is merely to emphasize the design.

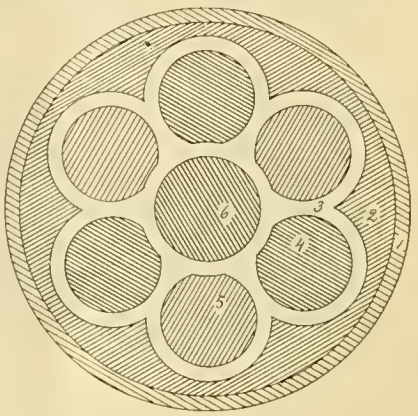

Fig. 1.—Twelve feet in diameter.

Fig. 1. Hyacinths: 1, Ida; 2, Czar Peter; 3, Baroness van Thuyll; 4, Robert Steiger; 5, Charles Dickens; 6, Baron van Thuyll; or 1 and 3 white; 2 blue; 4 and 5 light blue, and 6 dark blue, or a similar combination of red and white. Tulips: 1, Artus; 2, White Pottebakker; 3, Chrysolora; 4 and 6 Scarlet Pottebakker; 5, Proserpine, or 1, pink, 2 yellow, 3 white, 4 and 5 scarlet, 6 yellow.

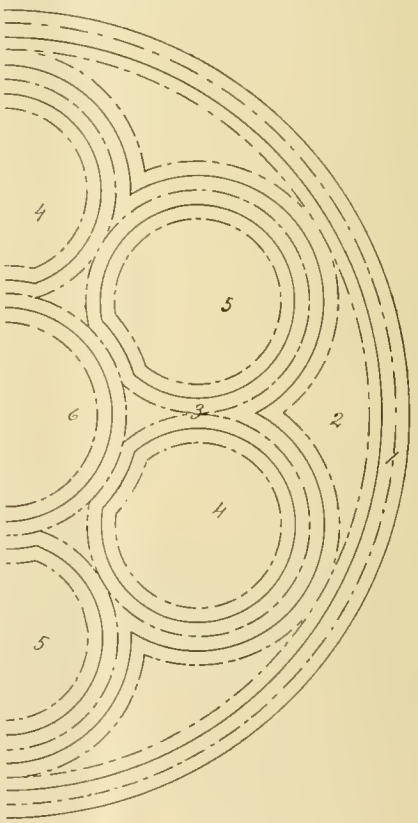

Fig. 2.

Fig. 2. This illustration, a working sketch of Fig. 1, may at a glance look like a confused lot of circular lines; the full lines are border lines of the different colors corresponding to those of Fig. 1; the dotted lines are those that should be drawn on the ground as they mark the outlines of the space on which the different colors should be set, consequently the full lines are not drawn on the ground but the bulbs are set on the dotted lines and in the spaces between. With a sketch like this, one can figure out almost to a bulb the number needed of each color to fill the bed. Hyacinths can be planted five to seven inches apart and tulips four

to five inches, five and four inches respectively, giving an intense color effect and therefore suitable for small beds.

These designs are all drawn to five inches between bulbs. If this distance is altered it will make a corresponding difference in the size of the bed; if six inches is the distance, for instance, the design of

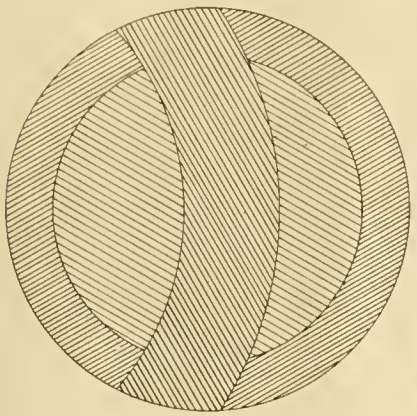

Fig. 3.—Seven feet in diameter.

Fig. 3, would fill a bed eight feet five inches in diameter. For such bedding only named sorts should be used, and for a good result it pays to get the best grade of single varieties as they give the greatest satisfaction. The mixed sorts, and bulbs in separate colors belonging to the mixed border, may be used for cut flower

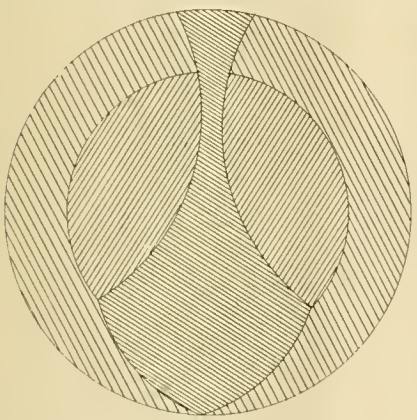

Fig. 4.—Eight feet in diameter.

purposes or for forcing, but for regular bedding they are a failure, being of different height, color and season of flower. Care should also be taken to choose varieties that bloom at the same time. In hyacinths, for example, Norma is fading when most of the others are coming out, and of tulips the Due van Thol

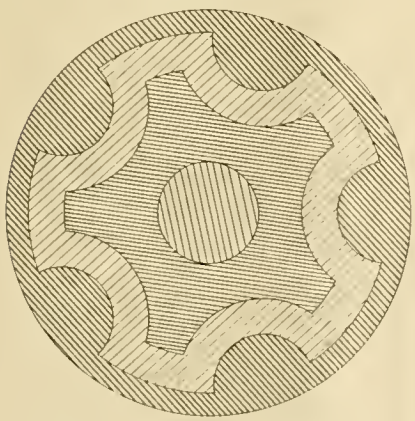

Fig. 5.—Ten feet in diameter.

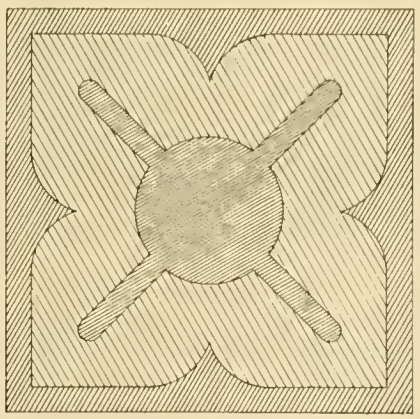

Fig. 6.—An eight-foot square.

class should not, for the same reason, be used with others. The height must also be taken into consideration and the sorts arranged in the bed accordingly.

The best time for planting is in October, but it can be done until winter sets in, and hyacinths can even be planted in early

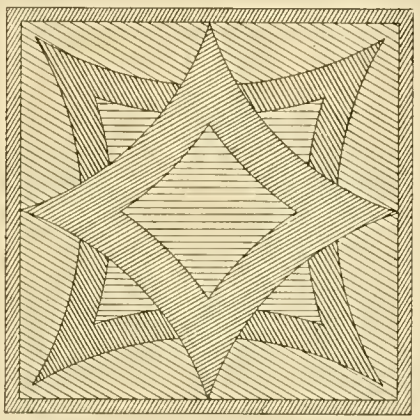

Fig. 7.—A twelve-foot square.

spring and give good results if the bulbs are kept well, but then the planting should of course be done as soon as the ground can be worked. A well drained, light soil is the best for bulbs. If too heavy and stiff, it should be mixed well with sand or sifted coal ashes; manure

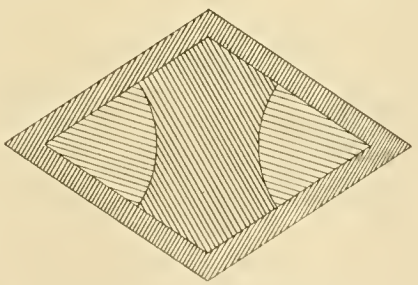

Fig. 8.—Diamond 6x9 feet.

will only do good, if it is well decayed; fresh manure and commercial fertilizers must be avoided.

A covering of three to four inches of soil on top of the bulbs is about right, and the planting can be done with a trowel, but a better though slower way is to dig out the bed to the proper depth, smooth and rake the bottom, lay out the design there and set the bulbs on that. In covering care must be taken to put the first soil on lightly otherwise the bulbs will be turned and knocked out of place. If the soil is not as well drained as desirable or if it is a cold and exposed position, it is better to set the bulbs right on the surface after preparing the bed and placing an inch of sand or coal ashes on top; then the bulbs are covered with the usual amount of soil. But if the place is too wet or cold it is a waste of time and money to plant bulbs.

But a bulb display can be had on a place really unsuited for the purpose, if it is desired, but in a round about way. We will then have to plant the bulbs in pots rather later in fall, burying them in a well drained place in the usual way only more shallow to keep them dwarf, covering and uncovering them as usual. When

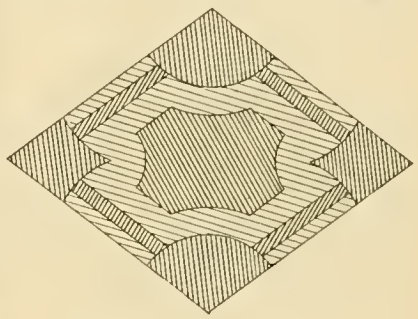

Fig. 9.—Diamond 9x12 feet.

they are coming on in spring they can be lifted, staked and tied, knocked out of the pots and planted the same way as summer plants. The main objection to this way is that most of the work comes when we have dozens of other things to look after, while the normal planting of bulbs comes at a time when we are not so much pushed.

Even when planting on suitable places it is a measure of precaution which insures success to order about five per cent more bulbs than wanted and to pot the surplus

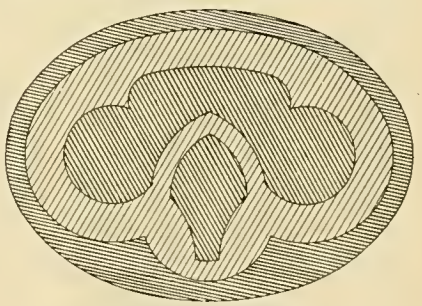

Fig. 10—Ellipse 6 1-2x9 feet.

and treat them in the above mentioned way, taking care to retard or bring them on a little in spring, as the case may require, to have them out at the same time as those in the bed. They can then be used as substitutes for the dead and poor ones.

After planting of the bed, it is allowed to stand until time for covering, which is when severe weather sets in. It is a gross mistake to cover too early and too heavy.

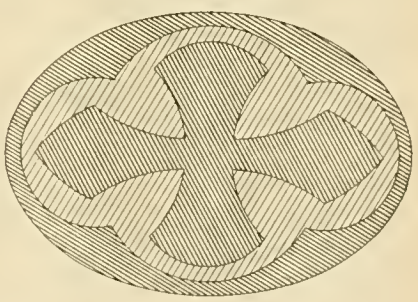

Fig. 11—Ellipse 8 1-2x9 feet

The soil is then kept warm enough for the growth of the bulbs, and the result is weak and comparatively useless shoots. The season for uncovering is sometime in March, according to the weather, but not before, as the repeated freezings of early spring are very injurious; in fact, the object of the covering is to keep the soil at a cool and even temperature. The best material for this purpose is straw, long manure or leaves.

When the bed is uncovered and cleaned, there is nothing to be done until the flowers begin to expand, then it may be necessary to stake some of the hyacinths, using thin pointed stakes stuck in the ground close by the leaves. It does not matter if they penetrate the bulb. The

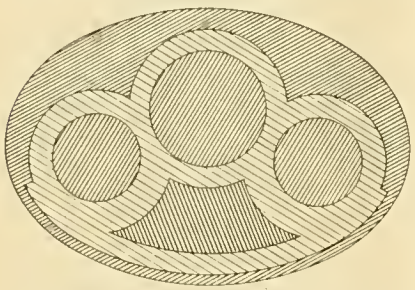

Fig. 12.—Ellipse 11x16 feet.

raffia or twine is then tied hard around the stake a couple of inches above the ground and then with a loose loop around the flower stem. Another tie is made moderately hard on the flower stem between the bells and then the stake is brought in close to the stem and tied with a loose loop; in this way the flower can keep on growing without being pulled into a crooked position.

The substitution of those grown in pots for dead and poor bulbs can be done either before the buds show color or when the flower is about fully expanded. During the first period care must be taken not to disturb the roots too much, but otherwise the work is easily done. When about fully expanded it does not matter so much about the roots, although some care is required in planting so as not to break any, but to disturb them between the periods mentioned as a rule proves fatal to the flower. When the flowers are faded, the stems should be cut off, as it is too hard a drain on the vitality of the bulbs to let them go to seed. The beds

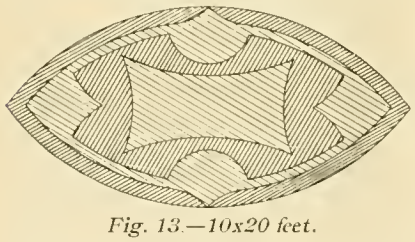

Fig. 13.—10x20 feet.

should then be watered if necessary and if no manuring was given in fall a dose of liquid manure will be of much benefit, the object being to get the bulbs as strong as possible for next season.

It is better to leave them in the ground till the leaves fade; then they should be taken up, spread and dried in the shade and stored away till planting time. But as a rule the beds are to be refilled before the growth has quite ceased, and then they should only be left to dry in the shade a few days for the tulips and about a week for the hyacinths and then laid in sand or dry soil and kept in a dry place till about August when they are taken out and stored as usual; otherwise, if

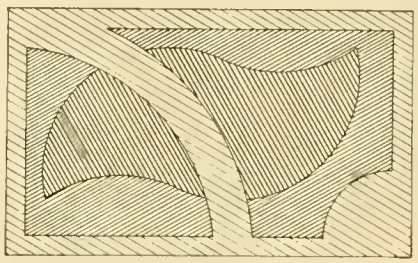

Fig. 14.—Rectangle 5 1-2x9 feet.

there is any moisture at all, they will start to grow. The bulblets that have formed at the base of the bulbs should be removed a couple of weeks before planting to allow the wounds to dry well.

When the boundaries between the different colors have been marked with small sticks, before the flowers were cut off, the bulbs can be lifted in sorts. The best of them can then be used again for the same purpose with good results, but the poorer ones should be classed with the mixed varieties. The bulbs can also be left undisturbed for a couple of seasons, filling the beds in summer with plants that do not rob the ground of too much of its strength, but it is better to replant each year.

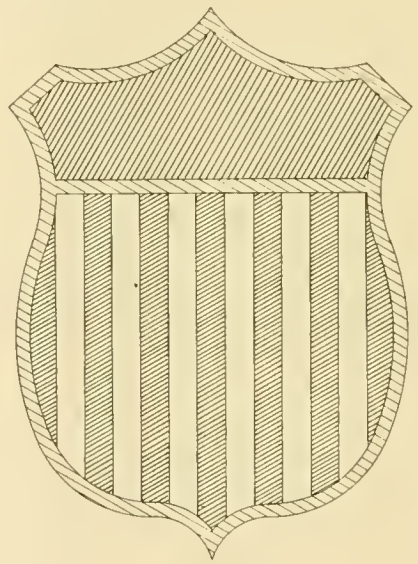

Fig. 15.

The patriotic design, Fig. 15, given here looks well planted in red, white and blue, and the outline in yellow hyacinths. The stripes should be made wide enough for two rows each at least. In this way and with five inches between the bulbs, the size of Fig. 15 is about 12x16 feet, requiring about 260 red, 220 white, 180 blue and 125 yellow hyacinths.

H. HANSEN.

YOUNGSTOWN, O.—H. W. Turner has resigned his position as manager of E. Hippard's large greenhouses to accept a place in Philadelphia.

MELROSE, MASS.—The second annual exhibition of the Amateur Gardeners' Association was held on September 14, afternoon and evening, and a large number of townspeople were in attendance. The hall and tables were handsomely decorated with plants and the display of flowers, fruits and vegetables was very extensive. The judges in the flower department were Chas. Ingram, L. R. Pittman and D. J. Desmond.

CARNATIONS.

CULTURAL NOTES.

September 24.—Carnation growers should learn valuable lessons from their experiences. Looking back over the summer just past I see the worst season for the growing in the field that I have experienced since entering the business. No rain from May 10 until July 12, then three showers in one week and little or no rain since. During the early part of this drought we had exceedingly hot weather and entirely dewless nights, making the worst possible growing conditions imaginable for carnations.

It is usual for me to have plants of such size that they require planting in the houses at least ten inches apart one way and twelve the other, but this season most of them could be planted 8x10 and that they attained even this size I attribute entirely to the fact that they were started early and were cultivated with especial care all summer.

Under these adverse conditions the varieties showed up quite differently in growth Among the whites Flora Hill made the finest growth. Next came Alba Superba, which also promises to be able to stand a few hard raps and come up smiling. Genesee and Jack Frost were very little behind Alba Superba. Evelina suffered considerably from the drought but has made some good flowers inside and promises to live up to its reputation for producing early flowers and many of them.

In pinks Triumph took the lead in fine growth but had quite a few dry leaves around the bottom of the plant. Mrs. Frances Joost made fine plants, clean to the bottom. Argyle also came in clean, and while not quite so good as Joost they are excellent plants. New York made fine plants, and a number of sports and seedlings I have on trial all came in fairly good. Victor and Daybreak suffered the most and were scarcely worth transplanting because of the dry leaves which extended half way to the top of the plants, but since they started in the houses they promise to turn out fairly well.

In yellow Eldorado made the best growth but did not transplant as nicely as the others. Pingree made good short growth but will not bloom until late in the season. Gold Nugget, on the contrary, while not as large as the Pingree, will have more flowers for the holidays.

In scarlet Bon Ton takes the lead; it is inclined to be close to the ground but otherwise it is an ideal plant. Jubilee, being a slow grower, made only medium sized plants. Wellesley turned out good plants and so did Red Jacket, but perhaps the most promising of them all is Uncle Walter, a sport from Tidal Wave, which will be sent out by John Murchie, of Sharon, Pa.; the plants are in excellent shape and promise to yield a very good crop for the holidays.

Armazindy leads all the fancy sorts for fine growth, and next to it comes Bird-in-hand, a new one that will be sent out by Elmer Weaver, of Bird-in-hand, Pa. Lily Dean made fairly good plants and so did Mrs. Bradt. Helen Keller suffered considerably from the weather but seems to be coming up well inside.

Contrary to even my own expectations the varieties sent me by John H. Sievers, of San Francisco, have made, with but one exception, the finest plants in the field. There are among these some remarkably good types and at this date they give promise of proving profitable commercially. Their lack of fragrance at

our Chicago meeting is not noticeable now; in fact just the opposite is the case for they are especially spicy.

My 1800 seedlings have failed up to date to show anything that would take a place over the varieties now in culture.

ALBERT M. HERR.

THE OUTLOOK IN ST. PAUL.

Carnations have made an average growth in this section. The weather was quite dry during the best growing period and plants on higher ground suffered. Rust is not so prevalent as in former years and we have not heard of any stem rot.

In white Flora Hill, McGowan, Evelina and a few Silver Spray are planted. In pink Daybreak still leads the list with Triumph, Scott, Victor, Tidal Wave and Mrs. McBurney following. In red Jubilee has been planted quite extensively, also some Portia and Morello, and of the new varieties Bon Ton and Firefly. In yellow and fancy varieties Mayor Pingree and Mrs. Bradt are the most promising.

One grower had his plants all housed before the Omaha convention and is now cutting a fair supply of good, medium and indifferent blooms. From present indications I do not think there will be enough blooms to supply the demand this winter. While a few more plants have been benched than last year, the supply is still deficient. Of the newer varieties Flora Hill, Triumph and Bon Ton are the most promising in their respective colors. Of the older varieties Daybreak and McGowan are the only ones considered good enough to plant extensively. FELIX.

AMONG THE GROWERS.

Peter Fisher, of Ellis, Mass., has filled his houses with the Mrs. T. W. Lawson and outside of this variety will grow only fifty to one hundred each of the best standard varieties to preserve stock and for hybridizing purposes. He has also a large number of very promising seedlings, some of them on second and third year's test.

Edward Swayne, of Wawaset, Pa., has given up most of his space to seedlings. He has a fine fringed seedling of Daybreak shade which promises well and of which he has planted 2000, also a clear yellow sport of Eldorado which he has named Pure Gold and which gives the appearance of being a valuable commercial sort.

S. J. Reuter, Westerly, R. I., is giving a trial to about every one of the recent introductions, including White Cloud, Alba Superba, Genesee, Evelina, John Young, Nivea, C. A. Dana, Bon Ton, Mrs. Northway, Elizabeth Skinner, New York and Frances Joost. He has planted Freedom and Alaska quite heavily.

Ernst J. Asmus, W. Hoboken, N. J., grows Mars and Jupiter exclusively for scarlet. This is his fourth year with Mars and he finds it all right. Jupiter has never yet been exhibited or put on the market and he thinks it good enough to keep exclusive for a while.

C. S. Swayne, Kennett Square, Pa., has planted 5000 of the new Sweetheart and is closely watching 500 other seedlings.

Wm. Swayne, Kennett Square, Pa., is giving Wellesley and Bon Ton a trial as standard scarlets. Chas. Hunt, Graniteville, N. Y., makes Scarlet Wave his leading scarlet and Dailledouze Bros. still swear by Hector.

A. J. Tharp, Bedford Station, N. Y., has a handsome new cerise seedling, of which he has put in 2000 plants.

Wm. Bell, Bayside, N. Y., has put in a good number of John Young, Maceo and White Cloud on the strength of the splendid showing made by these varieties at Cottage Gardens last winter.

W. R. Shelmire, Avondale, Pa., has about half his benches in Cardinal, Progress and Emeline, and half in unnamed seedlings.

J. N. May, Summit, N. J., has a new variegated and a new pink one of which he is growing 2000 each, and besides has several thousands of all shades of color under test.

A. M. Herr, Lancaster, Pa., devotes two houses each 20x150 to some twelve varieties of California seedlings from J. H. Sievers, of San Francisco. Their blooming qualities and commercial value are as yet unknown, but they have made an excellent growth and in general appearance give every promise of making a record for themselves. Triumph is one of Mr. Herr's mainstays in pink, and for scarlet Jubilee is planted in quantity. All the newer varieties are under trial here in greater or less number and there is also a large batch of seedlings.

John Reimels, Woodhaven, N. Y., has planted in addition to the usual large stock of standard varieties, Manhattan, Sebec, Triumph, Empress, Conch Shell and a few each of every one of the introductions of the past two years.

CHRYSANTHEMUMS.

CULTURAL NOTES.

September 24.—Some of the novelties of 1898 which we have on trial have made excellent growth thus far. Autumn Glory has fine foliage with short jointed footstalk and seems to be about right for commercial purposes. Mrs. C. H. Pierce is also a good, clear grower of about the right height, although we would like it to be a little stronger. Yellow Fellow is one of the best we have seen for growing into specimen plants or standards and also shows up well in the beds. Solar Queen has the heaviest foliage of any variety we have and will have to be planted farther apart than most sorts. In regard to height it is all that can be desired and from present indications ought to be ready to cut about October 20. W. H. Chadwick has made good growth, but we find that it must be watered sparingly.

Mrs. Arthur J. Caton will be fully as early as last season and with us its habit is of the best. We are very much taken with the growth of Maud Adams, especially as a specimen plant. One of its best points is that it holds its foliage so well. Geo. S. Kalb is the first one to show color here but some of the others will be ready before it, as Kalb should be allowed to fully develop before cutting. Midge, though later in showing color, does not take so long to develop.

Care must be taken now to prevent the beds getting too dry while the buds are swelling and after the petals commence to show or the blooms will suffer for it. Single stemmed plants in pots require plenty of light and a place near the glass, with plenty of ventilation. Market plants which have been lifted from the bench and potted as soon as rooted should have an application of weak stimulant every few days. Such plants must have room enough to allow the air to circulate freely around them or they soon lose their lower leaves. They should be staked and tied up to cause them to be of good form at the time they are wanted for sale and it pays to disbud market plants, although it should not be done quite so closely as with plants for exhibition. C. W. JOHNSON.

Fertilizers and Fertilizer Cartridges.

M. Fatzer, of France, has taken me to task for some comments recently made on M. Truffaut's fertilizer cartridges. He convicts me of one exceedingly glaring mistake and one which I hasten to apologize for, it is of such grave importance. It appears that the fertilizer is dissolved through the folds of the covering and not from the bottom as I wrote it. He also says that the fertilizer is in an immediately soluble form, but is compressed so that it dissolves little by little. According to the best of my ability to comprehend, this would come pretty near putting it into slowly soluble form, which is the expression used by "X", at whom M. Fatzer's remarks seem to be aimed.

These, however, are minor points. What has really aroused this aimable gentleman is my taking exception to the statement that M. Truffaut had analyzed hundreds of varieties of plants and composed for each a fertilizer exactly suited to its needs. After ridiculing and abusing poor "X" roundly, he reiterates this statement and adds: "This is the only scientifically true manner of proceeding."

In plain English, the trouble with M. Fatzer is, that he simply does not know what he is talking about. He is plainly and painfully ignorant of universally accepted facts—facts which have been time and again published broadcast and which are well known to every tyro in agricultural science.

Analysis of many individuals of the same species of plants grown in different soils, but apparently equal in vigor and productiveness, shows astonishing variations in results. It seems evident that the plant will take up those elements most available in the soil, to an extent far beyond its actual needs. This fact alone renders the analysis of the plant an uncertain guide. When we add to this the variable nature of soils as to the amount of the different available fertilizing elements they contain, the absurdity of M. Fatzer's talk becomes manifest.

We can readily conceive of a gardener, wishing to grow Asparagus tenuissimus, whose soil contained an excess of nitrogen, but was very deficient in potash. The use of M. Truffaut's special fertilizer for this plant in sufficient quantity to make up for the lack of potash, would, very likely, result in giving the plant an over supply of nitrogen, which is always a bad thing. In this case his pelargonium mixture would, without doubt, give better results.

There is no such thing as a "best" special fertilizer for any species of plant, to be used on all soils and under all conditions, and the man who claims to offer such a thing can be put down as "saying that which is not."

Our ahler growers have discovered that many plants, especially in the flowering sections, are benefitted by varying the nature of the feed at different stages of growth.

The true special manure must be special to the soil as well as to the plant species and must also be special to the stage of growth in many cases.

The chemist admits that his plant analysis is not conclusive for this purpose and he also admits that with present methods and appliances he is unable to analyze a soil so as to definitely show its fertilizer needs. He says, I can help you only so far under our present limitations; your further progress must be under the "old empiric methods" (which M. Fatzer condemns). You must experiment with your soil and the plants you desire to grow, until you find the combina-

tions which are special to your soil, your plants, your methods and conditions and special to them at their various stages of growth. When these true special manures are found they will quite likely be not truly special for your neighbor's and assuredly not for the whole world.

A word of advice, in closing, to Bro. Fatzer: When one finds it necessary to write on a subject which he knows nothing about, it is always safer to not write over one's full name but over an initial as does X.

Helpful Reminders.

While work should have progressed nicely during the past few weeks, there is much fall work still to be accomplished You can get help to paint, to do carpentering, mix soil and much of your work, but two items should receive your personal attention. I single these two items out for the reason that a mistake once made causes an injury long lasting. You will frequently have customers come in and ask you to help them out; they have a highly prized palm, are to leave town for the month and are afraid to leave it in the care of servants, or have a pair of agaves on their lawn which they wish cared for over winter. How many customers have been offended and how many times have you seen such cases terminate unsatisfactorily? You cannot do better than please your customers so long as they pay the bill, and the constant call for such service demonstrates its importance. It is as easy to care for a customer's plant as for one of your own; furthermore, a plant boarding is a sure sale compared with one of your own being grown on chance. Your greenhouse is for the care of plants and it is expected to yield a profit. Find out how much it costs per square foot to maintain your greenhouse; you will probably find that your house costs 30 cents a foot; then charge 40 cents; take all the plants that are offered, measure them, make out a receipt, giving dimensions and the amount of charges that will be collected when plants are returned, stating that the charge covers a period of eight months or less; if a plant is in bad condition be sure to say so on your receipt. Nothing makes friends better than a well managed boarding house.

The other item is cleaning up your cutting bench. Make out a memorandum of what stock you want propagated during the winter, and see to it that a large percentage of it is put in carefully now. Fall struck cuttings of geraniums in particular are the most satisfactory in spring, and it being so long before spring it requires forethought. You can hustle after January, it is true, and propagate a large amount of small stock, as many do each year, but such stock is not that which gives satisfaction.

In moving in your stevia plants it is well to set a few out in open ground, if you have such a convenience in a cool house; they hold well for holiday trade while pot plants frequently come on too early. Do not crowd them; this flower is becoming quite popular, but is wanted in long sprays, well furnished with leaves, which cannot be had without light.

All large plants that are in the open ground permanently, such as passion vine, jasmine, begonias, etc., should have their cleaning now. Useless wood should be cut out and all possible light given to the fresh buds. All the new growth should be able to adapt itself to the conditions which will prevail throughout the season and should not be disturbed later on. C. B. W.

New York.

TRADE SHOWS AN IMPROVEMENT.—PRICES ARE FIRM ON A SHORT SUPPLY.—NEW WHOLESALE PROJECT.—NOTES.

Trade for this week shows a slight improvement, the demand being better and the quantity of stock coming in shortened considerably, thus making prices firmer and keeping the market well cleaned up. Reports from all rose growers indicate that the stock is in splendid shape this season.

Howard Blauvelt has resigned his position with the New York Cut Flower Company and will open a wholesale flower establishment under the title of The Decker-Blauvelt Company at 42 West Twenty-eighth street in October.

John Yetter, familiar as a flower peddler for many years on the corner of Broadway and Nineteenth street, was found dead in his lodgings Thursday.

Alfred Dimmock arrived on the Umbria on the 17th inst.

The Victoria regia is blooming in the lily ponds in Prospect Park. The ponds are a great attraction for visitors, being brilliantly lighted at night by electricity.

H. H. Berger & Co. have moved from 220 Broadway to 47 Barclay street, where they will have much better facilities for handling stock.

A young lady clerk of the office of Suzuki & Iida is in Bellevue Hospital, her mind being affected.

San Francisco.

EXCELLENT BUSINESS AND TRADE PROSPECTS UPON THE PACIFIC COAST.—ROSES PROMISE WELL.—THE CHRYSANTHEMUM OUTLOOK.—AMONG THE GROWERS.—PERSONAL JOTTINGS.

Trade has been fairly good here and prices have held their own. We are receiving some excellent Semple asters at present and one grower is receiving 75 cents per dozen for his stock. A large number of Japanese lilies are coming in this season, particularly albums and rubrums, for which we are experiencing a very healthy demand.

Roses are plentiful and from present indications we are going to have some elegant stock this season. American Beauties are coming into the market in splendid shape and are bringing from $2 to $3.50 per dozen Some magnificent Brides and Maids are also to be had which are bringing a good figure.

Some very fine carnations are also coming in, particularly Mayor Pingree and Minnie Cook. They are wholesaling for 50 cents per dozen. Daybreak is not so prominent as in former years. Scott and Portia are also bringing good prices. Flora Hill is beginning to come in now; good stock sells for 50 cents per dozen.

The first greenhouse chrysanthemums of the season were brought into the market September 10, by John Carbone, of Berkeley. The flowers were all very large and sold readily for from $3 to $5 per dozen. M. Lynch, of Menlo Park, is also bringing in some Mrs. J. G. Whilldin chrysanthemums of very good quality. The present chrysanthemum outlook is that we are going to have plenty of early flowers on account of the peculiar growing season, but it is feared by some that the winter supply will be rather short as many of the late-flowering varieties are being rapidly forced into bud.

Violets are making a fine growth and are looking promising. Many of the retail florists are looking for their winter supply of palms, ferns, etc. Palms, particularly kentias and latanias are very scarce in salable sizes. There are plenty of small plants to be had but no large ones. Smilax, grown outdoors, is looking very healthful. Some fine lilies of the valley were received last week and retail readily for $1 to $1.50 per dozen.

A visit to Messrs. Fick & Faber, the carnation growers, shows their stock to be in first-class shape. This is their second year in the business. They have planted about 6,000 plants. One house of Mayor Pingree has done very well. They are also making a trial of Siever's best seedlings. Here also can be seen many of the novelties in bloom. They intend to plant C. A. Dana largely next season.

Paul W. A. Grallert is bringing in some of the finest Minnie Cook carnations that have been seen in this market. They are in good demand at 50 cents per dozen.

John Gilmour, who has started in the business near Haywards, has his two new rose houses in excellent condition and is already sending in some very fine blooms.

Mr. Gardener has returned from his eastern trip and is again with McLellan at Laurel Creek.

A new flower store has been opened at Sixth and Folsom streets.

Richard O'Connor is again in this city.

F. G. Krouse is on the sick list.

James Street, who has been head gardener for Capt. Kohl, has resigned and has gone to Oregon with his family and will engage in the wholesale growing of cut flowers.

Paul Monti, formerly of the firm of Carbone & Monti, died in this city a few weeks ago. Mr. Monti was one of our best known florists but of late years has not been identified with the retail trade.

Frank Pelicano spent a few days at Menlo Park last week looking over the different growers' stocks.

E. Serveau, of Serveau Bros., spent a day in San Jose.

The Cypress Lawn Cemetery at Colma is building another large greenhouse to be used for palms and decorative plants.

The Domoto Bros. have built quite an addition to their greenhouses this summer. The houses are to be used for chrysanthemums and cycas. They have many thousands of small palms and Cycas revoluta coming on for winter sales. Their chrysanthemums are looking very good.

Chas. C. Navlet, of San Jose, was a visitor this week. He reported a good trade in the city during the Native Sons' gathering.

Edward W. Parsons paid this city a visit last week.

Thos. H. Stevenson has had his store renovated and it now presents a very handsome appearance.

Jas. Carbone is now in Oakland.

John H. Sievers has been making an exhibition of his tuberous begonias this week. They are of excellent quality and are generally admired.

Charles Halbrow, formerly in charge of the park conservatories, is now head gardener to Capt. Kohl at San Mateo.

METEOR.

Philadelphia.

BOTH TRADE AND BUSINESS HOUSES ARE IMPROVING.—STOCK ALSO SHOWS A DESIRABLE CHANGE.—DEATH OF J. J. M'LEAN.

Things are brisking up considerably and the retailers are still improving. At Heron's, Eighteenth and Chestnut, a fine oak icebox with glass doors has been put in and the whole store repapered. Rupert Kienhle, of Seventeenth street, is also getting in a new refrigerator and

papering the store. Mrs. Shelly, on Thirteenth, has repapered and fixed up generally, and is much encouraged with the way business is coming in. At Pennock Bros., where the greatest changes have been made, the improvements are about finished and the place looks very swell. The new icebox, or flower case, or refrigerator, is almost as large as a small store and up-to-date in every respect. Electric lights cast their heightening color, reflected both by mirrors and marble; plate glass shelves on brass rods receive the white fibre flower vases, while beveled plate composes the greater part of the sliding doors. Large drawers at the bottom contain smilax and fern leaves. A large compartment at one end with a mirrored door is intended for ordered and selected stock, a very necessary place in a retail store. The new mosaic tiled floor of the store looks well and the quartered oak chairs and card desk in front of the counters leave nothing to be desired.

All the stock coming in seems to be getting better every day. Roses now reach the market in good, salable condition. Prices are much the same as last week, perhaps a little stiffer. Carnations now move lively at $1 per hundred, which is a good price for the season. Beauties start at $4 per hundred and step by degrees up to $12.50. The first violets are in but beyond being sweet they have no claim, being very small and of poor color. Valley is more plentiful and another source of supply has been opened, George M. Moss having been appointed agent in this city for the Ernest Asmus brand, which he will have in stock at all times.

S. S. Pennock's improvement is going on and he hopes to have the annex completed and the storage system in working order before the first of November. His tile counters for a commission store are quite an inovation. His business hours are now from 7 a. m. until 8 p. m. and it is rumored that in the near future his doors will never be closed save on the first day of the week.

We regret to announce the death from typhoid fever of John J. McLean, a member of the Florists' Club, whose funeral took place last Thursday. The club at a special meeting passed suitable resolutions and sent an emblem composed of cycas leaves in the form of a cresent wreath decorated with Carnot and Kaiserin roses and orchids. Mr. McLean was about thirty years of age and leaves a wife and two children. He was in the employ of George Craig.

W. J. Vesey, of Fort Wayne, was in town the past week and while here did some missionary work in the interest of the Florists' Fire Insurance Co., of which he is the secretary. A local agent is, we believe, to canvas the florists of this vicinity and urge upon them the necessity of their co-operation if they desire to get this cheap protection.

J. G. Eisele and family arrived home from Europe by the steamer Fuerst Bismarck on Friday of last week, and report a very pleasant vacation. K.

Denver.

A SEASON OF TRIAL AND TRIBULATION FOR COLORADO FLORISTS.—TRADE HAS BEEN EXCELLENT BUT STORMS HAVE PROHIBITED GOOD STOCK.—WILMORE'S DAHLIAS.

A cold, late spring, an unusually hot summer and the most remarkable freaks in the way of cloudbursts and hail storms have been experienced in Colorado this season, and florists who have not suffered a loss are the exception. The first storm, about a week before Memorial Day, swept the northwest part of the city and made Riverside Cemetery a dismal waste. Three weeks later a very disastrous storm struck south of the city, wholly demolishing the greenhouses of the Gallup Floral Company and Albert O'Brien. Not only was glass broken but much stock was ruined.

This will explain why many of our growers are in no position to boast of their carnations and shows why we are short of stock. The poor little roots have not had time to get much top and consequently there is but little more than half of the usual supply in the market. Everything seems to be late, although several establishments have unusually fine plants and will soon come to the front with an abundance of flowers.

The summer's trade has been good. The biennial convention of women's clubs started the ball rolling and has been followed by one convention after another through the entire summer. The autumn has brought many weddings and a shortage of flowers. Clematis and hops have been very effectively used on these occasions and W. W. Wilmore, our dahlia specialist, of whom we are justly proud, has furnished many thousand various colored blooms to help out the decorations. At the banquet of the National Editorial Association the tables were strewn with the choicest of his productions, many of them seedlings which have attained unusual brilliancy under the influence of Colorado's famous sunshine.

C. R. G.

Chicago.

AN UNFAVORABLE WEEK. — TOO MUCH POOR STOCK AND HARDLY ENOUGH GOOD BLOOMS TO SUPPLY A LIGHT DEMAND.—THE FIRST CHRYSANTHEMUMS BRING A GOOD PRICE.—SIEBRECHT'S FIRST CHICAGO PLANT AUCTION.—HORTICULTURAL SOCIETY'S PLANS.—JOTTINGS.

This has not been a good week in the local markets. The demand for stock has not been as brisk as was expected and first-class stock has been scarce, although poor flowers have been in such quantities that the sidewalk dealers on State street have had a busy week. The result has been that really fine blooms commanded somewhat increased prices but cheap stock was cheap indeed.

It is told of one grower that his daily consignment of roses was assorted into six lots which were disposed of at from 50 cents to $4 per 100. Only Kaiserin, and very good ones at that, however, were capable of exchange for 4 cents. Brides, Bridesmaids, Perle and Meteor were worth from $1 to $3, with the bulk of the stock handled by the retailers going at a figure midway between the two. American Beauties are coming in more numerously each day, but the bulk of the cut is only equal to $1.50 per dozen, while many short stemmed, wide open flowers have passed into the fakirs' hands this week.

Carnations have been plentiful enough had the quality been first-class, but there were very few really high grade blooms, and those of very ordinary attainment sold for $1 a hundred. Lily of the valley is scarce and brings a fair price, $4 to $5 per hundred.

The first chrysanthemums of the season were cut September 15, by Anton Then, who, with Weber Bros., is growing 15,000 plants, all single stemmed, for J. A. Budlong. They were the Lady Fitzwygram variety, three inches in diameter and the cut, about five dozen altogether, went to a South Side retailer at $2 per dozen. Weber Bros. have a splendid lot of plants, including all the popular varieties, and their cut will soon be continuous.

The regular meetings of the Florists' Club were resumed Friday of last week at 8:45 p. m., with Edgar Sanders in the chair. The thanks of the club were unanimously extended to the Nebraska and Iowa Florists' Club for the courtesies of convention week. There was some complaint of the lack of badges on the part of those who attended the Omaha convention, one member remarking that gentlemen of the local club were like lost sheep and that Brother Wilcox had to use a ribbon of his own to distinguish them from Coxey's army. Alex. Henderson, of Vaughan's Seed Store, was elected a member. Mr. Sanders was requested to invite Mr. E. Buettner to give an account of his recent trip to Europe at the next meeting. The election of officers will occur in November.

The Chicago Horticultural Society, which has planned its chrysanthemum show for November 8–12 and promulgated a preliminary list offering $2959 in premiums, is in search of a suitable hall for the exhibition. The previous shows have been held at Battery D, which has been demolished. The society is in the best of condition financially and every indication points to a remarkably successful show this year.

Miller & Schneider had a vase of Milla biflora on exhibition this week. It is a hardy bulbous plant with small cup or bell shaped blooms, the samples of which came from Mexico. Had it any of the desirable characteristics of a cut flower it would hardly gain popular favor at this time as it is named for J. Milla, a gardener at the Spanish court in Madrid.

J. Austin Shaw is a busy visitor this week, preparing for Siebrecht & Son's auction sale of palms, ferns, orchids, crotons, etc., to be held at 114–116 Wabash avenue Monday, September 26, commencing at 10 a. m. sharp. John P. Cleary, of New York, will conduct the sale.

The sale of carnation plants has been going on apace. The growers who had a surplus have found a strong demand and many varieties are now hard to obtain. Scott has sold particularly well. Although early planting has been the rule there are yet many establishments where the work is still progressing.

The greenhouses at Morton Grove formerly owned by W. H. Mueller and later by A. Wintermute, are now the property of Paul Kreismann. The establishment comprises thirteen houses, 30,000 feet of glass, and has been put in excellent shape. Mr. Kreismann's city address is 27 Market street.

Emil H. Mack, a former employe of Kennicott Bros., and recently a street flower dealer, was found dead in bed at 2128 State street, September 17. He had been asphyxiated by gas. Mr. Mack was 40 years of age. His home was at Columbus, O., where his father was a state senator for ten years.

The shortage in Dutch bulbs has, as had been expected, resulted in an increase in prices and is now aided and abetted in this by the heated condition in which several consignments have reached Chicago this week.

The Stollery Bros.' Argyle carnation, bright rose, of recent introduction, is selling well again this fall and has made a fine growth for those who have planted it in this vicinity.

Paul Berkowitz, representing H. Bayersdorfer & Co., of Philadelphia, was in town this week. Other recent visitors were T. W. Ball, of the Cincinnati Cut Flower Company; L. H. Reed, of Grand

Rapids; John Schneider, Kansas City.

Last Thursday lightning struck the smoke stack at Garland Brothers' establishment at Des Plaines, and threw bricks for a distance of 200 feet, breaking glass and otherwise doing considerable damage.

The Stanmeyer sisters have opened a retail store at 273 Lincoln avenue and the Art Floral Company, which has several other stores, one at 82 State street, their first venture down town.

Although the Chicago Chrysanthemum Committee will not resume its sessions until October, it has already received a seedling sent by J. A. Carbone, of Berkeley, Cal.

E. H. Hunt was in town for a day or two this week between his Wisconsin trip and an expedition to Indiana.

Emil Buettner and family reached home from Europe on Monday. They enjoyed their trip thoroughly.

O. J. Friedman has secured the contract for the erection of the fifteen Memorial arches for the Peace Jubilee.

Washington.

RETURNING SOLDIERS ARE WELCOMED WITH GARLANDS OF FLOWERS.—PATRIOTIC FLORISTS.—TRADE ABOUT THE SAME.—LOOSE BLOCK IS DAMAGED.—W. R. SMITH CONVALESCES.

On September 9 we had one of the grandest floral fetes here that possibly ever happened. It was the home coming of the District of Columbia Volunteers from Santiago. All the florists of Washington joined in a spontaneous response to a call from the chairman of the reception committee, to shower the heroes with flowers. Under the chairmanship of J. H. Small, Jr., assisted by all the florists except two, each of the seventy officers was presented with a wreath thirty inches in diameter of laurel, with gladioli and red, white and blue ribbon. Major Harries was presented with a similar wreath, only larger and trimmed with orchids, while each of the 700 soldiers was presented with a bouquet of roses. A wagonload of flowers was strewn in their path as they marched up Fifteenth street past several thousand school children singing "Home, Sweet Home" as they threw the flowers under the feet of the soldiers. The parade marching up Pennsylvania avenue with the 700 bouquets in the air on the ends of the guns was a scene never to be forgotten. There were more than 1200 yards of No. 12 red, white and blue ribbon used, all of which was donated by the merchants through a committee of florists consisting of C. F. Hale, W. Crawford and Wm. F. Gude. Every flower and all work connected therewith was donated by the florists. The next day a handsome box of cut flowers was sent to every sick soldier with the compliments of the florists of Washington. The liberality of the florists on this occasion has been the source of much gratifying comment by the public, and no doubt will do much toward fostering the love for flowers.

Trade in general remains about the same as in previous years, there being a very limited supply of flowers to do business with since asters are gone. Roses and carnations are both scarce.

The handsome store of J. Louis Loose was considerably damaged by fire in the very early morning of September 20, caused by the burning of the seven-story clothing store on the opposite corner, the intense heat from which set the Loose building, which is four stories high, in flames from cellar to roof and breaking every pane of glass on the Twelfth street side.

W. R. Smith has so far recovered as to be able to be around again attending to his duties, although very weak as yet.

Visitor: Chas. D. Ball, of Holmesburg, Pa. P.

St. Louis.

STOCK AND MARKET CONDITIONS.—THE FAKIR ARRIVES.—BOWLERS JUBILATE AT THE HOME OF THE BEYER BROTHERS.—SOUNDS OF REVELRY BY NIGHT.

Business, which had picked up quite noticeably, has fallen off again. The Exposition opened last week; the streets present quite an animated appearance compared with their summer dullness, and steady cool weather is all that the florists are asking for to open what promises to be a prosperous season. Stock coming in shows the effect of the warmth. Perle, Meteor, and the other single roses come in badly opened and soft; Bride and Bridemaid are holding their form much better. Carnations are still scarce and are bringing ridiculously high figures for the quality of the stock offered. The fakir made his appearance on the streets the other day handling roses. It appears he has commenced early in the season and expects to stay with us during the coming winter.

A most enjoyable evening was spent by the bowlers and their friends at the greenhouses of the Beyer Brothers last Saturday evening, when the celebration of the winning of the Evans Cup was consummated. Music and feasting were the principal attractions and they were both excellent. The Alpine Mandolin Club outdid itself in its endeavors to deserve the hearty appreciation of its auditors. After the feasting, sketches, songs and other amusements were in order, and under the benignant rule of "Doc" Helwig, who was master of ceremonies, the strong points of each participant were fully developed. Frank Fillmore rendered Annie Laurie in his own inimitable style. Benecke, "Our Jule," did not tell us of St. Peter's experiences, as he did on the ride into Omaha from Krug Park, after the battle of the bowlers, but he told us several things that will rank with his former effort. The Beyer boys sang several German selections and the others all did their share. A pleasant and unexpected feature of the event was the serenade tendered by the Pandanus Mandolin Club, which is composed entirely of employes of the Beyer Bros., and the boys all had such a good time that they very nearly forgot to go home that night.

The bowling club meets every Monday night and next week three new members are to be welcomed. R. F. T.

St. Paul.

STOCK IS FAIR BUT HARDLY EQUAL TO THE DEMAND.—NIGHT FIRING NECESSARY.—CHRYSANTHEMUMS ARE IN AND THE VIOLET CROP IS NEARLY READY.—A WEDDING ORDER.—NOTES OF PERSONAL HAPPENINGS.

Trade during the month has fluctuated with the weather and stock has been governed by the same conditions. The demand for flowers of all kinds is now very good.

In the line of cut flowers Meteors are the most abundant and finer stock was never brought into our market. Perle and Sunset are also in good form and demand. Bridesmaid, Testout, Kaiserin and Bride are scarce. Beauties are more popular than ever, with an inadequate supply of good blooms.

In carnations the scarcity is very noticeable. All small white flowers are very scarce, the unusual demand for funeral work being the chief cause of the shortage. Disease seems to have destroyed all outside grown asters. Mendenhall, of Minneapolis, has an exceptionally fine house of asters grown on benches, the stems long and stiff with perfect blooms.

Night firing is now a necessity but we hear of some mildew in the houses of those who think they can do without heat. Growers should use extra care and not begrudge a few pounds of coal.

L. L. May & Co. have some Fitzwygram chrysanthemums ready to cut.

John Nilsen expects to commence cutting violets October 1.

E. F. Lemke's new store on West Sixth street is fitted up in modern style and now open for business.

A recent wedding at Minneapolis was the occasion for a splendid floral display. Mendenhall had the contract for the decoration, one of the finest and most extensive ever seen in this section. The C. A. Smith Floral Company made the bouquets, the bride's consisting of twenty dozen Kaiserin roses and the others being of the same generous proportions.

John Vasatka, of Minneapolis, has sold out and will retire from business.

Gus Ganly, who formerly conducted a florist stand in this city and a store for a short time, was recently accidentally killed by the cars in Minneapolis.

John A. May was severely injured by being thrown from his bicycle a few weeks since. He is now able to be about with the aid of crutches.

Carl Johnson, clerk in L. L. May's retail store, was badly hurt in a collision recently and is still laid up at home.

Paul Berkowitz, of Philadelphia, made us a pleasant call on his return trip from California.

S. B. Dicks and J. Comont, of London, England, were recent callers. FELIX.

FRANKFORT, IND.—H. M. Humfeld has been adding one house for carnations.

BURLINGTON, VT.—A. Gebicke has bought the establishment of William Lee and will conduct the business hereafter.

ELWOOD, IND.—Wm. Woerner, successor to M. E. Good, reports trade very satisfactory. He recently had an order for a $75 floral piece which was very creditably executed.

CHEWS LANDING, N. J.—Wm. Entricken is moving his hothouses to a tract of land which he has purchased here and will increase his facilities for doing a large trade.

TOLEDO, O.—W. F. Konker died September 11 from the effects of drinking by mistake from a bucket containing a Paris green mixture which he had prepared to spray his plants.

PADUCAH, KY.—Robert E. Rudolph, who has been with Brunson & Co., has gone to Louisville to enter the employ of C. W. Reimer & Co. His brother Guy will soon follow him.

SPRINGFIELD, MASS.—The palm swindler, whose appearance in various sections of the country seems almost like the Will o' the wisp, has turned up in Springfield and his clever dodge was worked on Aitken & Son on Thursday of last week.

WEST CHESTER, PA.—The third floral exhibition of the Chester County Flower Association was held at Cloverly Farm on September 17. The prizes included some very beautiful articles and the display of plants and flowers in competition was large and attractive.

THE AMERICAN FLORIST

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Wednesday to secure insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

CARNATIONS recently planted should not remain too long without stakes or other supports.

IT is none too early to get soil in such shape that it can be readily made use of for potting purposes in winter and spring.

WHILE plans are being matured for the season's campaign, it will be well to remember that Easter falls on April 2 next year.

TENDER stock being housed, that repair glazing should not be too long deferred and the heating apparatus may still need some attention.

THE Lord & Burnham company is now engaged in the construction of greenhouses in fifteen cities between the Atlantic and the Mississippi.

THEY learn best to improve varieties who learn first that new sorts which, after a fair trial, show no improvement on existing types should be taken to the rubbish pile.

FIRING has begun. There are fires and fires, and there is also the Florists' Mutual Fire Insurance Company, whose policy, for some amount, should be written on your place *now*.

SUCH spring bedding stock as pansies, forget-me-nots, silene, daisies, etc., can be safely wintered in cold frames, if well protected during severe weather. The plants should be well established in the frames before hard frost sets in.

"THIS seems to be a season of growth depression the world over," says James Sproule, the San Francisco seedsman. "Growth depression" is a good phrase. We have needed this; it appeals to him who grows and the seedsman who contracts; it is also full of meaning. The coining of such a fitting expression is a recompense these troublesome times. And why should it not prove useful to the flower grower? For example: It shrinks the roses to half a crop at Christmas; it blights big batches of Harrisii; carnations won't open, or prematurely go to sleep; Beauties, under its baneful influence, abort, with insignificant stems and poor foliage. Need we illustrate further? "Growth depression" explains so many things, it must have come to stay.

Catalogues and Cut Flower Price Lists Received.

Seneca Nurseries, Geneva, N. Y., trees; Cherry Hill Nursery, West Newbury, Mass., pæonies; S. J. Baldwin, Seneca, Kans., cherries; Weeber & Don, New York, N. Y., bulbs and seeds; Siebrecht & Son, Chicago, Ill., sale; Schlegel & Fottler, Boston, Mass., bulbs and plants; Harlan P. Kelsey, Boston, Mass., plants; Roustan Servan & Co., St. Remy de Provence, France, seeds; Wilhelm Pfitzer, Stuttgart, Germany, plants and bulbs; Holton & Hunkel Co., Milwaukee, Wis., cut flowers; S. S. Pennock, Philadelphia, Pa., cut flowers; Bassett & Washburn, Chicago, Ill., cut flowers; Cincinnati Cut Flower Co., Cincinnati, Ohio, cut flowers.

Society of American Florists.

MEMBERSHIP IN BOARD OF TRADE.

All members of the S. A. F. are herewith informed that by virtue of their membership in this organization they are entitled to membership in the National Florists' Board of Trade upon payment of an amount $2 less than the regularly authorized and advertised rates. Application for membership under this privilege should be made to Mr. C. S. Loder, secretary National Florists' Board of Trade, 271 Broadway, New York City, the applicant being prepared to show that he is in good and regular standing in the S. A. F., and the concession will also be available for past members of the Board, who, upon renewal, are members of the S. A. F. WM. J. STEWART, Sec'y.

PLANT REGISTRY.

Notice is hereby given that in accordance with instructions voted at the convention at Omaha, a Registry Book is now open at the Secretary's office and all persons having new varieties of plants to which they propose to give distinctive names are informed that said names, with full descriptions of the varieties to which they are given, may be registered in the office of the Secretary. Priority of notice shall be considered as securing to any applicant the exclusive right to the use of any name as applied to one variety of any particular species, it having been first ascertained, after due inquiry, that said name is not already in use as applied to any variety of the same species already introduced, and the rules of the society regarding such registration having been complied with. Upon the completion of such registration due announcement of the fact, together with full descriptive notes and details necessary for the identification of said variety, will be made through all American horticultural trade papers and the Society of American Florists will thereafter do all in its power to protect the privilege of the individual or firm making such registry to the exclusive use of the title as registered.

Parties desiring to take advantage of these provisions will please communicate with the Secretary and all information desired will be promptly given.

WM. J. STEWART, Secretary,
67 Bromfield St., Boston, Mass.

Greenhouse Building.

Greenfield Hill, Conn.—F. E. Perry, one commercial house.

Newton, Mass.—H. A. Mansfield, one commercial house.

Our Trade Directory.

No wholesale dealer in plants, seeds, nursery stock, heating apparatus or florists' supplies can afford to do business without the American Florist Company's Trade Directory. This handy volume of 351 closely bound pages lists every dealer in the business and contains classifications and other information of great value. It is sent postpaid for $2. Bound in flexible and durable leather, handy for the pocket, $3.

Boston.

BUSINESS DULL.—STREET FAKIRS MISSED FOR TWO DAYS.—HORTICULTURAL EXHIBITION.—FINE DIPLADENIAS.—LOCAL NOTES AND VISITORS.

Business has fallen off somewhat during the past week. Flowers have accumulated in wholesalers' hands in a discouraging sort of way, largely on account of a temporary interference with the outlet through which a much larger proportion of the medium quality stock passes than is generally realized. Unlike New York, where the Greeks control the street trade, Boston supports a large fakir contingent which is almost exclusively composed of young Jews. The observance of the annual Jewish holidays took these enterprising traders off the street for two days and the result was that large quantities of roses and carnations were left without a market.

Carnations in pink shades such as Scott and Daybreak are in demand and the supply of flowers of acceptable quality is not equal to the call. White carnations are more plentiful and buyers are not so fastidious in regard to the quality of these as of the colors, white being used mainly for mass work. Roses are small as a rule, the great bulk going for low figures, top values being obtained for but a very small percentage of choice selection.

On Saturday last, George McWilliam showed, at Horticultural Hall, a set of lovely seedling dipladenias, which he is an adept in growing. These were in several shades of pink and deep cherry and of fine size. One, the gem of the lot, he has named Elsa Whitin and for this honorable mention was given. It's color is pale blush flushed with deeper tint and a well marked circle of pink in the throat.

Other interesting exhibits came from Jas. Comley who showed a large variety of cut flowers. Mrs. Richards and Miss Doran with perennial asters, Lothrop & Higgins with a magnificent collection of eighty sorts of cacti and decorative dahlias, J. D. Colan cockscombs and Rea Bros. hardy perennials.

On Wednesday, September 21, Edward Hatch sold at auction a big consignment of palms, rubbers, araucarias, etc., from R. Dreyer, of Woodside, N. Y

The Houghton Horticultural Society of Lynn visited the grounds of H. H. Hunnewell on Thursday, September 15.

The report of the Massachusetts Horticultural Society for the last half of the year 1897 has just been received.

W. E. Doyle is making improvements in his Tremont street store.

Visitors: A delegation of Fall River's most distinguished florists under the leadership of C. Warburton and George Smith; C. F. Gibbs, St. Johnsbury, Vt.

W. E. Coburn has leased the greenhouses formerly occupied by A. W. Buell, 131 Chelsea street, Everett.

D. A. Taylor, a swindler who victimized several Boston florists, has been apprehended through the shrewdness of a boy employed by Max Brothers.

Notes and Comments.

It is never safe to take too much for granted, nor should we jump to conclusions, nor make positive statements unless they can be backed up by facts. I am reminded of these precautions after reading in a recently issued publication about flowers for amateurs where it is stated that the flowers of the Chinese primrose (Primula Sinensis) "Are about the size of a silver quarter as a general thing. Some are as large as a half dollar."

Some twenty years or so ago the writer of this was privileged to read a paper upon this popular greenhouse and cool room dwelling house flowering plant before the Germantown Horticultural Society, and in the course of the remarks made, said in effect that when the Chinese primrose was introduced the flowers were about the size of a nickel, now they were as large as a silver dollar. After the publication of the paper in the *Gardener's Monthly*, it was interesting to receive so many letters from various parts of the country inquiring where seed producing such large flowers could be obtained; and a florist friend visiting our greenhouses about the same time, when we were alongside the primroses then in bloom and the question of circumference was broached, volunteered the proposition to "Let's try a half dollar first," and suiting the action to the word, found, as anybody else will find who has tried the same experiment, that there was quite a deep frill around the silver half dollar after it was carefully arranged over the face of the flower.

I am afraid that the writer who made the statement commented upon has depended upon his eye entirely and guessed at random and written accordingly, not taking the trouble to find out whether he was promulgating a correct statement or not. If Chinese primrose flowers were as large as a silver dollar twenty years ago they ought, with the improvement constantly going on, to be somewhat larger than that to-day. I like the use of that kind of illustration to convey ideas if used correctly, but when used haphazard are much worse than the using of the measuring rod. It seems rather remarkable that similar illustrations should be used by two different people upon the same subject at an interval of twenty years and yet be so widely at variance, especially when the difference of statement indicates that a diminution in size has taken place within that time, when we are reasonably sure there has been an advance in size as well as form and color in this popular class of flowering plants.

E. L.

TROY, N. Y.—The palm swindler attempted his game upon G. T. Sambrook & Son but was detected, although not apprehended.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

Every paid subscriber to the AMERICAN FLORIST for the year 1898 is entitled to a five-line WANT ADV. (situations only) free to be used at any time during the year.

SITUATION WANTED—By young man: 8 years' experience with large growers: good private or commercial place. A No. 1 references. Address
P A B. 118 So 8th St, Philadelphia.

SITUATION WANTED—By a married man, one child four years old; wife to do housework for board. Good all around man. Address
CAPABLE, care American Florist.

SITUATION WANTED—By competent lady florist of 12 years' experience; position in store, an up-to-date designer and cut flower worker. State wages.
I M COATES, 122 S. Spring St., Lexington, Ky.

SITUATION WANTED—By thorough, experienced florist and designer as foreman; No. 1 rose grower; carnations, 'mums, violets, specialties Commercial or good private position. G. Box 547, Alliance, O.

SITUATION WANTED—As foreman by a first-class up-to-date grower, good in all branches of the business; only first-class place wated. Wages $75 per month, open now or next spring Address
FOREMAN, care American Florist.

THE SEED TRADE.

AMERICAN SEED TRADE ASSOCIATION.

EVERETT B. CLARK, Pres.; JOS. A. BOLGIANO, 1st Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

THE tomato seed crop is reported injured by blight.

BIDDERS on the government seed order are looking for surplus onion seed.

MINNEAPOLIS, MINN.—S. Y. Haines & Co., have opened their new offices at 105 Boston Block.

KANSAS CITY, Mo.—Wm. Markurth, of the Harnden Seed Co., is spending his vacation at Glenwood Springs, Colo.

THE many friends of Mr. W. Atlee Burpee will regret to hear of the very serious illness of his mother, Mrs. Burpee.

S. F. LEONARD contemplates giving up his mail catalogue department and confining himself to the wholesale and gardeners trade.

THE drought in France has seriously affected many of the crops which require two years to produce seed, beet, magnel, cabbage, carrot, etc.

VISITED CHICAGO: J. Comont, with Jas. Carter, Dunnett & Beale, London, Eng.; H. M. Clair, Jr., representing S. L. Allen & Co., Philadelphia.

THE warehouses of Messrs. Segers Bros., Lisse, near Haarlem, Holland, containing 80,000 guilder's worth of Dutch bulbs, burned August 30, and was a total loss. They were insured for 50,000 guilders.

THE shortage of Japan longiflorums is further increased by heavy loss from heating and consequent decay. The early shipments just in average a loss of from thirty-five to fifty per cent. When a case starts wrong the bulbs seem to go quickly and the entire case is soft on arrival.

SAN FRANCISCO.—Mr. Waldo Rhonert has been in town a few days. Mr. Chas. P. Braslan also came up from San Jose. The scarcity of onion seed is more apparent than ever. The engagement of Lester L. Morse, of C. C. Morse & Co., to Miss Pierce, of San Francisco, is announced. The business of the Sunset Seed and Plant Co. has been removed from No. 33 Market street to No. 821 Montgomery street.

NEW YORK, Sept. 23.—United States Appraiser Sharrats called for the attendance today of all parties protesting against advances made by the examiner of bulb invoices, and the response brought to his office thirty or forty representatives, of almost every importer in this section. It transpired that invoices are frequently faulty in failing to specify grade and quality of goods that would explain disparity in valuation. The appraiser ruled that when no size is specified on invoice the goods will be appraised as of first quality. Various rulings favorable to importers and otherwise were made. It was conceded that on all Dutch bulb stock the usual five per cent for cash be recognized as a legitimate discount on invoice when so specified in catalogue of exporter and the invoice. In many cases it would appear that the examiners are making large importers (who understand market conditions and buy at close figures) pay duty on valuations based on invoices to small importers, together with the usual penalty for under valuation.

"Faultless and Unapproachable!"

As my old friend W. Edgar said last week in his Begonia advt., is a good description; I wish **TOBACCO STEMS** were a worthy subject for such elegant diction, but there is good, bad and middling, even in that prosaic item. My stems are guaranteed **absolutely fresh and strong**, and present low price is because short of storage. Advise hurry up to catch this exceptional offer. **$8.00 per ton**; half ton lots at same rate. **LEAF TOBACCO DUST**, the genuine article (not ground stems) $3.00 per 100 lbs. (10-lb trial bag 50c). Remit by check, P. O. O., Express M. O., or Reg. Letter. Stamps taken for small amounts.

THE
Gardeners' Chronicle.

A Weekly Illustrated Journal.

ESTABLISHED 1841.

The "GARDENERS' CHRONICLE" has been FOR OVER FIFTY YEARS THE LEADING JOURNAL of its class. It has achieved this position because, while specially devoting itself to supplying the daily requirements of gardeners of all classes, much of the information furnished is of such general and permanent value, that the 'GARDENERS' CHRONICLE" is looked up to as the STANDARD AUTHORITY on the subjects of which it treats.

Subscription to the United States, $4.20 per year. Remittances to be made payable to H. G. COVE.

OFFICE:—
41 Wellington St., Covent Garden, London, England.

MÖLLER'S
Deutsche Gärtner-Zeitung

The most widely circulated German gardening journal, treating of all departments of horticulture and floriculture. Numerous eminent correspondents in all parts of the world. An advertising medium of the highest class.

Moller's Deutsche Gartner Zeitung is published weekly and richly illustrated. Subscription $3.00 per annum, including postage. Sample copies free.

THE NURSERY TRADE.

AM. ASSOCIATION OF NURSERYMEN.
A. L. BROOKE, Pres.; E. ALBERTSON, Vice-Pres.; GEORGE C. SEAGER, Rochester, N. Y., Sec'y.

HON. A. L. BROOKE, president of the A. A. N., has been renominated by the republicans of his legislative district of Kansas.

IT is reported that nursery trade in Canada is more prosperous than in a number of years, although there is no large planting being done.

A COMMITTEE of the town council of Toronto has become disrupted over a proposition for the city to purchase 3,000 young trees for street planting. Bids will be asked for.

C. L. WATROUS, the Iowa nurseryman, writes that after ten years of extensive trial it must be said that, for the south half of Iowa at least, the experiment with Russian fruit has been not only a disappointment but a serious and costly failure.

FOR more than twenty years Prof. J. L. Budd has been preaching the excellence of the Telegraph grape, a variety the merit of which has been somewhat obscured by the report that it is identical with Christine, a statement which Prof. Budd characterizes as erroneous.

SEEDLESS grapes are destined to make a fortune for some nurseryman and in California great efforts are being made to produce such a variety. Two European grapes, the Corinth and Sultana, are seedless but are of such small size as to lose most of their value.

BEFORE the Civil war there were practically no nurseries in the south. J. Van Lindley, Pomona, N. C., calls attention to the fact that there are now fourteen nurseries in Alabama, thirty-five in Arkansas, ten in Florida, twenty-five in Georgia, ten in Mississippi, twenty in North Carolina, two in South Carolina, thirty-five in Tennessee, thirty-two in Texas and thirty in Virginia, or 213 in the ten states. A southern nurserymen's association is projected.

SIMCOE, ONT.—H. H. Goff has met with such remarkable success in gladioli culture and in general hybridizing that he is attracting wide attention.

ALEXANDRIA, IND.—Mr. Snetham has added one house for roses 10x100. The Muncie Floral Company, of Muncie, Ind., is putting in a branch here on Church street.

Trees and Shrubs.

We have an immense collection of **Trees, Shrubs, Vines** and **Herbaceous Plants.** Trees of small sizes for setting in nursery rows, or **large stock** for immediate effect. Trees of large sizes, 2 1-2 to 4-inch diameter, in large assortment.

Send for trade catalogue. Prices on large caliper trees given only by letter.

OF INTEREST TO FLORISTS **EVERGREEN TREES** FOR WINTER DECORATIONS

We are specially prepared to supply florists with Evergreens suitable for winter decorations, either for window boxes, tubs or pots. We recommend the dwarf varieties of Arborvitæs and Retinosporas where a small or medium growth only is desired, and tall-growing Arborvitæs where larger sizes are preferable; either size plants are of perfect form and well furnished to the base. We solicit your orders for these.

LATANIA BORBONICA.

2-in.,	3 to 4	leaves,	60c per doz,	$4.00 per 100,	$35.00 per 1000
3 "	4 to 5	"	12 to 15 in.	high . .	10.00 per 100
5 "	5 to 6	"	18 "	$5.00 per doz.	40.00 "

I desire to thank my customers for past favors, and suggest that with increased facilities I am offering a larger **STOCK OF PALMS** and will be able to serve them better than ever before. My trade in the past has exceeded my most sanguine expectations, and with *prosperity smiling on our country* I bespeak a share of their patronage in the future. The palms offered are all home grown, strong and healthy. **The measurements given are from the top of pot to the top of plant, in its natural position.** I am particular to mention this, as some growers include the pot in their measurements, in other words, **include the length of the roots** with the height of the plant

TERMS: Unknown correspondents will please furnish satisfactory reference or cash with the order. All orders will be shipped by express, unless otherwise ordered.

THE AMERICAN FLORIST.

OUR PASTIMES.

Gunners at Silver Side.

The Philadelphia Florists' Gun Club and the Claymont (Delaware) Gun Club met in friendly contest on the Penn Rock Co.'s greenhouse grounds at Silver Side, near Wilmington, on Saturday last. The agreement was for eight men on a side to participate, but two of the Philadelphians failing to come to the scratch, a six-team shoot was agreed upon. The result was: Claymont hit 104 out of a possible 150, and Philadelphia 113 out of the same number, the latter club thus winning by the small margin of nine "birds." It was nip and tuck all through the match, Philadelphia eventually winning out in a sort of Garrison finish.

Messrs. H. B. Jones and Robert Lockerbie, representing the Penn Rock Co., had a surprise in store for the shooters and their friends on their arrival in the most welcome, appetizing and bountiful luncheon, which the ride from Philadelphia and the surrounding country had fully prepared them for, and to which ample justice was duly done. The view from Mr. Trump's mansion (Mr. Trump is the proprietor of the Penn Rock Co.'s establishment) was imposing and magnificent. The waters of the river Delaware were a mile or so distant, where some of the ships which pass in the night were visible in the daytime, and the shores and hills of New Jersey beyond made a delightful view.

Mr. Albert Edwards, florist, at Claymont, had charge of the shoot, and owing to his good management everything went off without a hitch, and a most enjoyable day was spent. After supper, songs, speeches, recitations and three cheers for each of the gun clubs and the Penn Rock Co., coupled with which were the names of Messrs. Jones and Lockerbie, the party wended their way to the station happy in the thought that another day had been well spent. With the exception of the name of Mr. Edwards, your correspondent failed to get any of the other members of the Claymont shooters. The Philadelphia club was represented by George Anderson (captain), John Burton, Wm. K. Harris, J. Wm Colflesh, A. B. Cartledge and George Craig. Other florists present were W. P. Craig, Horace T. Dumont, David Rust, Edwin Lonsdale, John Westcott and some others whose names have escaped me. L.

Chicago Bowling Score.

The Chicago bowlers meet for practice at the Illinois alleys, on Randolph street, each Friday evening. Following is the score made September 16:

	1st.	2nd.	Av.
John Zeck	157	158	157½
F. Hills	146		146

J. C. Vaughan	97		97
W. J. La Grotte	75	99	87

Philadelphia Bowlers.

Archer led the second class contest up to the time he was taken sick. He is around again and, if in his old form, will have a walkover. Louie Cranpand Melle has been absent for a month. We missed his elephantine tread and his anxious, "keep in the middle"! Now that cooler weather has come he will be again on deck and will furnish the boys some amusement as he gambols up to the line.

The Monday night match games are developing some lively times. The last one was a scorcher. It was Leather-lunged Charlie's team against Magical Bob's six and the latter beat them every one of the three games in spite of the opposition's coaching and the general pandemonium. W.

WEBSTER CITY, IOWA.—James Follett, who had a very fine display at the county fair, lost the entire collection through the burning of Floral Hall.

YPSILANTI, MICH. — Eastern florists enroute to and from Omaha all admired the floral work at the Michigan Central railway station here. It is to be credited to John Laidlaw, and the principal design is the Maine, worked out of about 115,000 plants.

Milwaukee.

GOOD BUSINESS IN THE CREAM CITY.—MOVEMENTS OF MEN AND WOMEN IN THE TRADE.—A. BILLINGS' GOOD STOCK.—MR. BARR PAYS A VISIT.

The weather has been very encouraging to growers, and trade quite satisfactory to store keepers. Flowers have been somewhat scarce, but a large amount of orders have been filled during the past two weeks, with very little consigned to "the barrel."

Geo. Volk has formed a partnership with his nephew and opened a store at the corner of Milwaukee and Oneida streets under the firm name of Volk & Stewart. This is going farther north than any one in the trade has yet ventured.

Wm. Branch, who is located at Forty-second and Vliet streets, has leased of Chas. Baumgarten all his establishment except two palm houses, and will no doubt move there shortly. Mr. Baumgarten has been quite ill for several weeks and has just left the hospital.

Binzel & Kellner have purchased the stock of palms and ferns from the houses of Mrs. S. S. Merrill, which are torn down, the land being cut up into city lots. Mr. Volm, her gardener, has the building material and will shortly erect a new establishment on some lots of his own near by, and add one more name to the list of commercial florists.

A. Billings has surprised the craft by his excellent show of vegetables, fruit, roses, chrysanthemums and violets since he gave his personal attention to their growing. He has been very quiet for a year and is now exhibiting a stock that any one might be proud of.

Peter Barr, the eminent horticulturist, of London, has spent a few days here. His mingled praise and criticism of our parks has pleased many who passed strictures upon the commissioners for letting Mr. Pettigrew go. C. B. W.

Ferns for Cut Flower Work.

Polypodium vulgare, with its long narrow fronds, and Asplenum ruta muraria are well liked in small pieces owing to the grotesque form of their leaves. Pteris aquilina is a great favorite in the fall when the sun has turned its fronds to a magnificent yellow. Blechnum boreale is also very useful. These are hardy outdoor sorts. Among greenhouse ferns Adiantum cuneatum and A. gracillimum, also A. fragrantissimum and A. Farleyense are of easy growth, loose graceful habit and highly recommended for flower work. The same with Pteris serrulata and P. serrulata cristata, which are also easy to grow. The variegated forms of pteris, argyraea, cretica, albo-lineata and tricolor, also furnish excellent material. Among nephrolepis the exaltata enjoys particular preference on account of its long, slender leaves. Polystichum aculeatum, Aspidium falcatum and Asplenium viviparum are also well liked. Doodia caudata and Onychium Japonicum are cold house ferns and of great value. Of other kinds suitable for cultivation on a large scale lygodium deserves consideration. There are also the hardier species of davallia and those gymnogrammæ not absolutely dependent on the moist temperature of a warm house, which furnish splendid cutting material, although we would not advise their culture to any large extent. Polypodium aureum is desirable on account of the peculiar blue color of its fronds and acrostichums and platyceriums for their peculiar forms.—*Die Bindekunst.*

FLORISTS DECORATE FOR RETURNING SOLDIERS.—TRADE BRISK.—PLANS FOR THE CHRYSANTHEMUM SHOW.—MUCH INTEREST IS AWAKENING.—NOTES.

Nearly all the florists made some extra window displays last week upon the occasion of the return of the 13th Regiment from Cuba. Palmer had a very fine windmill; Thrall had stacked guns, Rebstock a very handsome urn and Adams a knapsack with "13th U. S. A.," all of which were very pretty.

Funeral work was quite plentiful last week, several people prominent in business and social life departing. Large designs were more in demand than bunches.

The aster Volcano is still erupting all kinds of blooms in profusion.

On Wednesday evening the Florists' Club met at Kasting's and considerable business was transacted relating to our fall show. A committee was appointed to put prices on premium lists and the committee on hall was told to engage a suitable place for the show. Now all that is lacking is a little more help from some of those who are still hanging back, but whom we hope to interest in the work. We have promises from the park, the Botanical Gardens and from the Forest Lawn Greenhouses for specimen plants of all kinds, which will be a leading feature, and I understand that some greenhouses that have never taken any active interest in growing chrysanthemums for exhibition are making a special effort this year. Another encouraging thing is letters from out of town people offering prizes for certain things and others leaving it to the club to place their prizes on what is deemed best.

Three of our dry goods stores had their fall openings this week, calling for a large number of palms, asparagus and roses which were furnished by Scott, Rebstock and Adams.

Palmer is still at his job of changing his store and when completed will have a beauty.

Recent visitors were, S. B. Smiley, Lancaster, who reports chrysanthemums looking fine, and J. C. Vaughan, of Chicago. W.

Peoria, Ill.

In local trade circles there is a confidence that this season is to be the most prosperous in recent years. Stock, particularly roses and carnations, is in better form than usual, and the awakening social life gives every indication of a busy winter for florists.

James C. Murray is making preparations for an increased business and began by engaging Franklin Lockyear, a designer of fifteen years' experience in Chicago and Los Angeles. Mr. Murray's establishment occupies three acres of ground and has 25,000 feet of glass. It is in charge of Charles Loveridge, who has held his present position for ten years, and who grows roses, carnations, lilies, violets, palms and general decorative plants nearly to perfection. As a bid for patronage Mr. Murray has just mailed to every possible customer in his vicinity a neatly printed eight-page booklet bound in a pretty cover of green and red.

The largest establishment in Peoria is that of Cole Bros, who devote a large area of glass to growing general stock. Their roses and carnations are all in fine form and they are delighted with the prospects for fall. All the other dealers are equally sanguine.

C. SOLTAU & CO., 199 Grant Avenue, JERSEY CITY, N. J.

Madison, N. J.

The regular monthly meeting of the Morris County Gardeners' and Florists' Society was held September 14, with President Duckham in the chair, nearly one hundred members and associate members being present.

The executive committee reported progress with the flower show arrangements; the schedule has been printed and mailed, McAlpin Hall, Morristown, secured for two days; in fact there is nothing left to be desired except public enthusiasm and this the committee was instructed to arouse.

The exhibits were far above the average, the keenest competition being in the wild flower class, E. Reagan leading with a collection of sixty-three named varieties, Mr. A. Herrington second with fifty-four. P. Cox made a splendid show of hardy perennials and annuals. Mr. Duckham displayed a beautiful English strain of zinnias; Mr. J. Jones a collection of delicious melons, and there were many other creditable exhibits.

Prof. Byron D. Halsted, of the Agricultural College Experiment Station, New Brunswick, N. J., delivered an excellent discourse upon the subject, "Some relations between the weather and growing plants." His remarks were well authenticated by frequent reference to his weather chart, which he had compiled for the preceding ten years. He pointed out the principal causes of crop diseases, the bulk being destroyed by fungi which wet weather produced. This was particularly applicable in the case of potatoes, excessive rainfalls in July causing a fierce growth of fungi till the crop was almost annihilated some years. The Professor gave some valuable points which were eagerly noted by the gardening element present. In conclusion a hearty vote of thanks was given the lecturer. C. H. A.

Columbus, O.

Business here is picking up nicely and prospects could not be better. Stock is looking fairly but will not be enough, as usual. A visit to Springfield, O., shows everybody there busy invoicing bulbs, but the mailing trade has not opened up yet. The weather is altogether too warm to make people think of buying bulbs.

Thomas Ludwig, formerly manager of the Columbus Seed Company, has left that concern and returned to the firm A. W. Livingston's Sons, with which seed house he was connected in former years.

The MODEL Extension Carnation Support

QUEENS, N. Y., Feb. 16, '97.
MR. THERON PARKER, Brooklyn, N. Y., Dear Sir:—I have tested your latest model Carnation Support and am free to say that I consider it the best wire carnation support that I have ever seen. It is quickly and easily applied, and I think will prove very durable, and you certainly deserve great credit for the invention.
Very truly yours,
C. W. WARD.

FLATBUSH, BROOKLYN, N. Y., Feb. 18, '97
MR. THERON PARKER, Dear Sir:—Your wire stake is certainly a gem. Without hesitating we indorse it as an up-to-date carnation support. Yours truly,
DAILLEDOUZE BROS.

W. HOBOKEN, N. J., Feb. 18, '97.
MR. THERON PARKER, Brooklyn, N. Y., Dear Sir:—It gives me much pleasure to congratulate you upon your success in getting up carnation supports. I think that those I have had from you are about as perfect as anybody will be able to make them They certainly fill my bill for an ideal carnation support, a thing I have been looking for for a long time. Wishing you every success in the sale of them, I am
Yours truly, E. ASMUS.

Salt Lake City.

UTAH'S METROPOLIS IS AWAKENING FROM A SUMMER SIESTA.—STOCK IS IN SPLENDID CONDITION.—MANY BUSINESS CHANGES.—PERSONAL DOINGS.

Salt Lake City has been very quiet for the past three months and the florists have felt the absence of the social element for it has been very hot and every one who could get away has availed himself of the cool, refreshing breezes of the mountains. However, fall is at hand and business is picking up. Growers are busy preparing for a prosperous winter and stock is, in general, much better than in previous years.

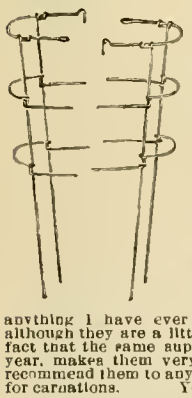
Many business changes have taken place in the past few months. Jovial Harry Parks has again moved and in future his friends will find him at G. W. Barrow's old stand, 544 East Second South street.

The Kensington Greenhouses are now under the managership of Mrs. Phough and will be run as a private concern, but it is whispered that she is going to open the most elaborate store in town.

Jas. H. Williams, at the city cemetery, has his place as usual, looking perfection. He knows the climate and the right stock to plant and does it. Can we not learn from these old timers?

The Huddart Floral Company is building a conservatory beside their store on Second South street to be used as a show house for palms and decorative plants. They propose to put in electric light and make it otherwise attractive.

While our patriotic brother, B. C. Morris, is at war with the Rough Riders, his hustling manager, Tom Hobday, has not been slow at home. Tom has done wonders in moving the greenhouses half a block south and has now a fine place and the stock looks well.



We must not forget a word of praise to A. Schulthess, the city park's superintenent, and his able gardener as we well know that our town people have enjoyed the beauties of nature there this year during the hot weather. P. T. H.

HORAN'S PATENT

Carnation Support

Patented Aug. 3, 1897.

Following are a few of the many testimonials received from various growers:

Buffalo, N. Y., Jan. 25, '98.
Mr. Jas. Horan & Son,
GENTLEMEN:—I have in use a few hundred of your patent Carnation Supports. They are supporting Flora Hill. While I consider the first cost rather high, they answer the purpose admirably, not crowding the plants, but affording light and air between them. They should be of various heights and sizes, to suit the different varieties of carnations.
Very respectfully,
WILLIAM SCOTT.

Connellsville Pa., Jan. 31, '98.
Mr. Jas. Horan & Son,
GENTLEMEN:—I have given your supports a fair trial and consider them far ahead of anything I have ever seen for the purpose, and although they are a little expensive at the start, the fact that the same support can be used year after year, makes them very cheap, and I would gladly recommend them to anyone wishing a perfect support for carnations. Yours truly, L. D. WOODS.

We have made an improvement on our Supports which admits of the rings being let out two inches, which prevents the plant from being crowded as it increases in size. While we think the size we have adopted suitable for nearly all the varieties now in cultivation, we can furnish larger sizes at a slight increase of cost over the regular sizes to those who desire them.

JAS. HORAN & SON, Bridgeport, Conn.

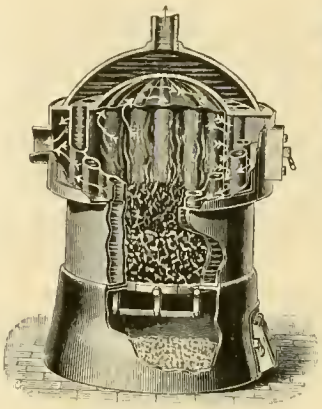
Pittsburg.

BUSINESS IS IMPROVING AND THE KNIGHTS TEMPLAR CONCLAVE PROMISES MUCH.— A SECOND WHOLESALE HOUSE.— MR. BURKE MARRIED.



Business is a little better than it has been for a few weeks past and all the florists are booking orders for the week of October 10, when the Triennial Conclave of the Knights Templar will be held here, and from present appearances will give them all the trade they can possibly handle. Foliage plants for decorative purposes are bespoken in such quantities that it is becoming a question if there are enough to supply the demand. Several of the leading florists refused to compete for the large decorations, so that they will be in condition to handle the orders for society affairs.

The Pittsburg Cut Flower Company reports business fairly good and prices obtained better than a week ago; roses bring from 2 to 6 cents each, American Beauties 10 to 30 cents, Flora Hill carnations 2 cents and Scott 1½ cents.

There will be another wholesale cut flower house started about October 1. S. S. Skidelsky is at the head of it, and has secured a location on Sixth avenue near Smithfield street.

George W. Burke, superintendent of Highland Park, has taken unto himself a wife, Miss Harper, and on returning from their wedding tour last Saturday were presented by the employes of the park with a very handsome silver tea set.

Cincinnati.

BUSINESS BEGINS TO REVIVE.—DUTCH BULBS ARE IN.—A VISIT TO MURPHYVILLE.—CARNATIONS GALORE.—THREE BROTHERS' BIG STOCK.

A little activity is felt in the cut flower market. Carnations are coming in more plentifully and with better stems. Roses have been improving in the past few weeks, and Bride, Bridesmaid and Kaiserin are now of good quality. Smilax has been in good demand but is rather scarce.

Dutch bulbs have once more arrived and hyacinths are inferior in size to those of former years, while tulips seem to be up to the usual standard.

A visit to Murphyville found the Murphys busy housing carnations. Will Murphy has had the majority of his houses planted for some time and all are now doing remarkably well. The plants on this place are about the same as last year. At Robert Murphy's Son's we found the plants in the field clean and strong, particularly Scott and Daybreak. C. C. Murphy has never had plants better than those of this year, especially Evelina and Flora Hill.

Beechwood, better known as Murphyville, is now the most important carnation center around Cincinnati. No less than 60,000 plants will be the surplus stock among the Murphys.

GREENHOUSE WOODWORK.

Open-air-dried Cypress Lumber is more durable, and better suited to Greenhouse conditions, than kiln-dried stock. But you cannot get it from those that are engaged in the business in a small way—even though their entire business is confined to greenhouse material—for it takes a long time for the lumber to thoroughly dry and this means an investment in lumber that only those of large capital can make. The only way to have air-dried lumber is to buy green lumber and hold it until it dries. Those that order dry lumber from the producers of Cypress get kiln-dried stock. It is cheaper for them to kiln-dry than to hold the stock long enough to season it in the open air. We carry a large stock and fill all orders with open-air-dried Cypress clear of knots, sap and all other defects.

Write for Circulars or Estimates.

CHRYSANTHEMUMS.

CULTURAL NOTES.

October 1.—As soon as the several varieties commence to show their petals the walks and floors of the houses should be kept as clean and dry as possible, as moisture may cause the petals to become spotted. Avoid a close atmosphere, particularly at night and, if the outside temperature is such as to warrant it, have a little artificial heat with the ventilators open a little way, for if the house is closed tightly without any fire heat the dampness will settle on the blooms and foliage and a few nights of this will cause them to rot. Some varieties, notably Mayflower and Golden Wedding, are subject to mildew, especially the plants on the north side of the bench. Should it put in an appearance give the foliage a dusting of sulphur or, better still, apply a light coat of lime and sulphur to the steam pipes, but be careful and not have it too strong. One of the principal points to consider if you want the blooms to stand shipping and give satisfaction afterward is to allow them to thoroughly develop before cutting, and also stand them in water at least over night before shipping. The blooms while in water need to be kept in an upright position for being allowed to lay over the sides of the jar is often the cause of their wilting as they cannot take up the water properly. We use half barrels with lath nailed across the top to hold the blooms while in the water and find this to answer the purpose well. C. W. JOHNSON.

SPECIMEN PLANTS.

Ten years ago chrysanthemums intended for specimen plants were grown outdoors until the autumn. Then the chinch bug was a stranger in the east, but it rapidly became a pest. It is not now so abundant as it was five years ago, but is still present in sufficient numbers to interfere with successful culture unless protection is given. Growers of plants as well as blooms were, so to speak, driven indoors. When Mrs. Alpheus Hardy was introduced, it was considered useless as a specimen plant, at least out of doors, but, "just for experiment," I tried one in the greenhouse all summer. It grew amazingly, and the comment among gardeners was that it could not possibly bloom well, because it could not ripen. But it did ripen excellently and produced large and well formed blooms. The Massachusetts Horticultural Society gave me a silver medal for special culture and since then all growers hereabouts have kept their plants under glass; and larger and handsomer plants have been exhibited than were ever thought possible.

Culture under glass requires more attention from the grower. He really should be, and generally is, an enthusiast. During the season of greatest growth, the months of July and August, the plants lack the sturdiness of field grown stock and we are apt to be over generous with artificial manures, with disastrous results. The roots, having exhausted the body of loam in the pots, come to the surface. We are on the right track so long as the roots appear healthy, but once notice them disappear, and you may be sure something is wrong before the trouble shows itself in any other way. Let the plants get dry, even to wilting, and then give clear water only, as the best antidote. The foliage usually turns yellow. This is especially the case with G. W. Childs and most of the dark flowered varieties.

Tying out should not be left too long, in fact it should be done every few days. There are always some overgrown shoots, which are difficult to accommodate, but while they are supple they will bend. A week ago, I doubled some completely over, and all are now facing out nicely. One can sometimes fill a bad hole with a bent shoot. Last season I discarded stakes, using wires with moderate results. I saw where improvements could be made, and have carried them out this season. I will say at once that the wiring plan is not applicable to plants which must be carried any distance to exhibitions. Stakes admit of the plants being drawn in, with the result that they travel in a smaller compass and with less injury. Nor is the plan suitable for all that will make specimens. W. H. Lincoln is a model plant for wiring; G. W. Childs one of the worst. An infinite amount of patience is required for putting on the framework of wire. Much calculation is needed as to the probable height or the length the shoots will grow.

One of my improvements this season, is in allowing for the contracting or expanding of the frame after it is on. Frames put on a month ago need expanding now. My first work is to put a wire stake in the center with an eyelet on the top, then a No. 16 wire round the pot below the rim. Four wire stakes laid crosswise over the pot are tied to this No. 16 wire. A circling No. 12 wire is put around the plant and tied to the cross stakes. The base is strengthened by No. 20 wire. Three lengths of No. 12 wire are bent over the plant, run through the eyelet, and secured to the encircling wire. This top part is stiffened by stakes driven into the pot and tied to the bent wires. All the ties are made with silkaline, which does not slip. The frames were put on thirty

plants and the tying done in six days. This was just a month ago. Not more than half of them will fill out as well as I could wish. A dozen good specimens are as many as I expect.

Disbudding of late years has been reduced to stems with one bloom. This was in keeping with the desire for large blooms. I think I can spread color over the plants better by letting more buds develop. Where the shoots are strong I am taking out the central bud, forcing the development of the side ones. Each flower will not need a stake; merely a tie will place it.

The following list of recent varieties are doing well: Yellow Fellow, Sybil Kaye, Mrs Kalb, Solar Queen, Casco, Autumn Glory, Red Warrior, Defender, Mrs. J. G. Glessner, Merula, Katherine Leech, Madge, Martin A. Ryerson, the Barrington and Bonnie Dundee.

T. D. HATFIELD.

REVIEW OF NOVELTIES.

It is too early to speak with any certainty regarding their merits, but some of last spring's novelties are very promising indeed, and from present indications we think there are several that will become prominent among the standard varieties. In looking over the stock, we find Alice F. Carey is making very strong, short-jointed growth. Autumn Glory, exceptionally strong, but late with its buds, as they are not ready to take at this date, September 24. Arline, very strong growth and short-jointed; promising well. Boundless Snow has been an entire failure with us, all the plants very stunted in growth; none will flower. Black Hawk, exceptionally good growth for a crimson variety, but rather long-stemmed from crown bud. Should the color be good and proof against burning, it will be a valuable addition to this class; it certainly promises well now. Frank Hardy has the same vigor that is characteristic of Good Gracious, its parent. Mrs. C. H. Peirce, dwarf, but very strong in its growth, making exceptionally large canes; very promising. Mrs. Arthur J. Caton, dwarf, with very heavy, metallic foliage. Buds taken August 15 are just beginning to open, giving very short stems from either crown or terminal. Miss Gladys Vanderbilt, buds nicely advanced, free grower. Pennsylvania promises as well as its parent, Philadelphia. Merza, dwarf, very short-stemmed, buds nicely set. Robt. G. Carey, strong grower. Solar Queen, dwarf, but very strong in growth, making extra heavy canes. From appearances we conclude it is a seedling from Georgiana Pitcher, which it strongly resembles. Snow Queen, good habit, quite promising. Yellow Fellow, strong grower, apparently good. Wm. H. Chadwick has made good growth, but from present indications we conclude ours will be earlier than those shown last year. Thornden has made very much stronger growth than in former seasons and bids fair to attain a prominent place among the standard varieties. Yellow Mrs. J. Jones has every indication of being as good as the white variety. We are testing six of the yellow and bronze sports from Mrs. J. Jones and hope to be able to determine their similarity or distinctiveness. Mrs. A. F. Wienold, rather tall and unless the buds develop with great rapidity it will not be ready as early as Mrs. A. J. Caton. We conclude that Solar Queen, Mrs. C. H. Peirce, Mrs. A. J. Caton and Merza will be acquisitions for single-stemmed pot plants. ELMER D. SMITH.

Obituary.

BURT EDDY.

Burt Eddy, known far and wide as the accomplished representative of Vaughan's Seed Store, died at his home in Chicago September 27. He had been on a business trip in the south, where he contracted malaria, which, with other complications, unhappily proved fatal. Mr. Eddy reached his home on the 20th ult., but the physicians who were then called to attend him gave little or no hope of his recovery. As his life was an inspiration to his fellows so was his death—he died at his post.

BURT EDDY.

Elbert H. Eddy, better known as "Burt" Eddy, was born in Cheshire, Conn., about fifty-four years ago. He taught school in his younger days and lived at home with his parents, his father being a miller. When the war broke out he enlisted in the 2nd Iowa Infantry and fought through the entire war, being twice taken captive and confined in Andersonville and Libby prisons. He returned to Chicago and met Maria Smith Currier, whom he married and who now survives him. The only issue was one son, Elbert B., who now resides in Chicago and is special agent for the United States Express Company. Mr. Eddy devoted a number of years to market gardening and was located at Wheeler, Ind. He raised fancy vegetables as well as vegetable plants for the trade. His original ideas in growing these and handling plants gained for him quite a reputation and he worked up a widespread shipping business; reverses, however, came upon him and he was compelled to give it up. He then made his way to Chicago and entered the service of Vaughan's Seed Store, which he has represented very successfully for the last nine years. Mr. Eddy was the author of a manual on the cultivation of celery, probably the best treatise of the kind extant, his own practical experience and extended travel and observation having especially fitted him for this work. Mr. Eddy's kindly personality made him hosts of warm friends wherever he went, and his untimely taking off will be sincerely mourned by many friends among the seedsmen, florists and gardeners. There has probably never been a more popular traveler in this trade than "Burt."

Robert Craig telegraphs from Philadelphia: "We shall all miss the welcome visits of Burt Eddy. Genial, kindly, considerate, well informed and faithful, he made friends everywhere. The trade has lost one of its most useful men."

Wm. Scott voices the general sentiment with regard to him in the following telegram from Buffalo:

"'Burt Eddy,' silently but too truly comes the words, 'Burt Eddy dead,' and at this writing we know no particulars, simply that friend Eddy has gone over to the great majority. When in a few years he that reads these lines, as well as he that writes, will be numbered among the dead, there may be some who knew Mr. Eddy more intimately than the writer but none who appreciated more his unique and picturesque personality. People speak of a big heart only figuratively, but if the heart were the organ from which emanated courage, generosity, wit, wisdom and kindly feeling for all mankind, then Eddy's heart would fill up that magnificent chest which was his. It is lamentable that Mr. Eddy has to leave us in the prime of his life, physically a giant, mentally head and shoulders above the average man. With his ponderous weight he was yet an athlete, a fascinating and lovable man. When Burt Eddy appeared we forgot the troubles and cares of life. The twinkle of his eye, the dimple on his cheeks, his comic grimaces as well as his serious sober business talks will ever be remembered while memory lasts. We mourn sincerely with his bereaved family and can only offer the solace that he, husband and father, never grumbled at his lot in life, except that his business called him too much away from his dear ones. To know Burt Eddy was to love him. We deeply mourn his loss."

Acalypha Sanderi.

The new plant heading this note is in Philadelphia. It made its debut here last week. It is certainly the most novel flowering plant that has been introduced for many years. There is a controversy in Europe as to its identity, some authorities claiming that it is a re-introduction and that its original name was A. hispida. Whether this be true does not detract from its value to-day, provided those who think they know a good thing when they see it are not mistaken in their estimate of its value.

The plant has the appearance of being so distinct and useful as to take its place at once as a standard flowering subject among the long list we already have. All the acalyphas heretofore seen, so far as I know, are grown for the beauty of their foliage alone, but this variety's claim to popularity will rest on its tassel-like, showy red flowers. The specimen which Robert Craig brought from New York is fifteen or eighteen inches high, and the tassels which are produced from the axils of its ample leaves are in some cases over a foot in length, gracefully drooping all over the plant and making a beautiful object which cannot fail to be a winner and sell on sight. It appears to be an ever-bloomer, making it possible to have it in bloom at any time, and especially at Christmas and Easter.

A. Sanderi is an introduction of F. Sander & Co., England. Julius Roehrs, Rutherford, N. J., it is stated, owns an interest in the stock and is propagating it for distribution in the United States. Mr. Robert Craig thought, when he saw this

novelty the other day, that to have a plant at his establishment would aid in taking orders for many more plants than would be possible by depending upon the description alone. This valuable acquisition, I believe, is to be disseminated some time this month. EDWIN LONSDALE.

[The accompanying illustration is reproduced from page 1285 of our issue of May 28, 1898.—ED.]

CARNATIONS.

CULTURAL NOTES.

October 1.—Some growers imagine that it is as easy to grow carnations as to grow radishes or geraniums, and so it is if you simply want carnations regardless of quality. To grow carnations that are strictly first-class is not one whit easier than to grow good roses, in fact it is not so easy. In the case of the rose a variety stays in culture long enough to give the grower a chance to study its requirements and needs and he can go to work after the first year or two with a reasonable assurance of success. In the case of the carnation a variety has scarcely become disseminated before another one displaces it because it is just a little better, and so it goes, year after year.

Almost every variety, to produce its very best, requires treatment slightly different from every other sort; some will take a few degrees more heat; some will stand unlimited feeding, while others would resent it; some will stand spraying and others will be almost killed by it. These are the principal differences, but there are a hundred and one other minor matters, all of which require constant watching.

The average carnation grower, with probably fifteen varieties on his place, will have to have at least five or six slightly different cultural methods to obtain the best results all around and as some of the varieties are no doubt new to his soil, it is the part of wisdom to take a careful look over the place at least twice a week and note the difference in growth and judge their requirements as nearly as possible.

If they are growing too soft and making weak stems they can be stiffened by adding a little lime to the soil, giving all the ventilation possible, keeping the soil on the dry rather than the wet side. If a variety is backward and does not show vigorous growth it may be helped along by the application of some good fertilizer. Sometimes a bench or part of a bench will be backward, sickly and weak, and if you look at the soil it will be found to have soured because of overwatering. Lime applied to such soil stirred up as deeply as the roots will allow will help to overcome this condition if no water is given until the soil has become well dried out and regained its sweetness.

At this season of the year constant attention must be given to watering because the full ventilation on the houses will aid evaporation, and the plants not being fully started they must not be allowed to get dry enough to check their growth. At the same time it must be borne in mind that the soil has not yet been filled with roots and will not take as heavy watering as it will require later on.

Ventilation is another thing which demands special attention at this season of the year, as the nights are getting decidedly cool. Here is where the different varieties come in; one sort will stand the ventilation on day and night quite late in the season and be all the better for it, while another will, if treated to the same dose, give split calyxes and stunted growth for six weeks afterward. These latter sorts will want a little heat on the houses whenever the outside temperature drops to 40° and if the houses get warmer than 50° or 55° a little ventilation will be required, as there is almost as much danger in letting them remain too warm over night as in letting them get too cold.

Do a little judicious trimming as you go over the houses. Deformed buds, sickly branches or anything that detracts from the appearance of the plants should be carefully cut out and thrown out of the houses as well; on no account allow rubbish to accumulate in your paths or under the benches.

In many sections the plants have quite a lot of dead and dry leaves around the bottom as a result of drought. Some growers advocate clearing these off, and from a point of cleanliness this should be done, but for the general health of the plant they had better be left on, as it would be an impossibility to take them off in anything like a thorough manner without tearing the bark of the plant and injuring it more than the cleanliness will benefit it. ALBERT M. HERR.

ACALYPHA SANDERI.

THE CARNATION IN CUT FLOWER WORK.

The past two or three years have worked wonders for the carnation as a cut flower. From an humble position among the tuberoses, bouvardias and such things, useful as boutonnieres and "filling in" for funeral designs, it has risen until it is the peer of the rose, a flower of the first rank. To the carnation grower is the florist indebted more than to anyone else for this splendid addition to his limited list of high class material. The carnation growers have sacrificed not only time and space in their greenhouses, but buds and flowers innumerable in their laudable endeavor to produce blooms of the highest perfection and their discretion and foresight have now been rewarded, for the people are beginning to appreciate it and the carnation has to-day hosts of adherents and admirers. The flower buying public came to it gradually. The full appreciation of the carnation has grown upon them. They have learned that if absolutely fresh it will not "go to sleep" within twenty-four hours and this, its excellent keeping quality, is one of its strongest recommendations. Fragrance is another mainstay of the carnation with the flower lover; size and form are for the connoisseur but fragrance appeals to the masses. The short stemmed carnation of the olden time has passed almost out of the memory of the public of this decade and the plebeian position it occupied is forgotten by the flower buyer of to-day; con-

sequently, he is prepared to give up almost any price for flowers of excellence and the dealer finds that under present conditions he can sell a dozen carnations for $3 as easily as for 50 cents, if they are worth it. Fancy varieties, well grown and perfectly fresh, are readily disposed of for high prices and in addition to this the dealer gains the respect of his customers by supplying them with these flowers, which are sure to make a good impression wherever they go.

We find that we seldom have to throw good carnations away, for it does not take our customers long to establish the carnation habit. Having once learned of its good qualities, they are sure to come back for more; but the moment we begin to handle inferior stock, this advantage is lost. Bear in mind always that a cheap carnation is dear at any price. If improperly grown, it is fragile and will not keep and thus one of its best recommendations is lost. It pays the carnation grower to give his closest attention to bringing his product to the highest degree of finish and it pays the retail florist to refuse to handle anything but the best quality. If he follows this advice he will find that the carnation will quickly make friends for itself and for him.

In using carnations for any kind of floral work, more freedom in the indiscriminate mixture of color is permissible than is the case with roses, but in all cases the proper accessory for harmonizing their various colors is demanded, and that is the subdued green of the carnation's own foliage. No other green will compare with it. It is not conspicuous and it takes only a little to bring out the full effect of the carnation's colors. Carnation growers are advised to plant a lot of some vigorous growing variety for the sake of the green alone and make it a rule to put a few spikes of foliage with each bunch of carnations they prepare for market. It will be appreciated by the trade and by the flower buying public.

New York. W. A. BRIDGEMAN.

CARNATION HOUSE.

ED. AM. FLORIST:—Please advise as to the best width for a carnation house running east and west, and state how the benches should be arranged so as to have some of them wide enough to wheel in the soil. State also whether it would be advantageous to construct the roof with a three-quarter span to the south and whether there should be a path next to the north wall. Give width of paths and benches. V. X.

It would be a very presumptuous thing for any one to attempt to state positively what is the best width for the above, or any other greenhouse structure. The next house we build (unless further experience modifies our views) will be detatched, even span, east and west. It will be 31x125 feet from out to out of the posts with about eight feet three inches rise from plates to ridge and continuous ventilation at the ridge, either three feet on one side, or two feet on each side, and continuous ventilators in each side wall. These will be wooden shutters without glass and eighteen inches wide. The north and south benches will be three feet wide and ten inches away from the sheathing, to avoid drip. Adjoining these will be twenty-inch walks and in the center a twenty-foot bench divided into three six-foot benches by means of two twelve-inch walks. Considering cheapness of construction, ease of working, light, ventilation, and large bench area in proportion to glass used, we have been unable to evolve anything better than this. It should be noted that the writer has not seen a house of this size and arrangement in use. W. N. RUDD.

AMONG THE GROWERS.

J. F. Klimmer, Oak Park, Ill., has displaced Lizzie McGowan for Flora Hill, of which he is growing 2,000 plants. He has 1,200 Tidal Wave, 1,000 Scott, 500 Triumph and smaller lots of Argyle, Evelina, Gold Nugget and Dazzle. He grew Morello and Thomas Cartledge last year but did not repeat the experiment.

Anton Then, Chicago, has doubled last year's stock of carnations and now has 12,000 plants in excellent condition. His leading varieties are Scott, Daybreak, McGowan, Jubilee, Argyle and Tidal Wave. Of the novelties he favors Mrs. Bradt and Mayor Pingree and has planted largely of them. He gives both Argyle and Jubilee a high rating and is also growing many Flora Hill and several hundred each of Bon Ton, White Cloud, Evelina and Empress. Instead of following his houses of chrysanthemums with carnations he will use the room for pot plants, especially hydrangeas, which are in fine shape.

W. N. Rudd, Mt. Greenwood, Ill., makes Jubilee his leading variety. His other principal sorts are Mayor Pingree, Flora Hill and Mrs McBurney. He has found merit in Cerise Queen and is growing a considerable number of it. Neither Scott, McGowan nor Daybreak are accorded large representation in his houses. Mr. Rudd is one of the few about Chicago who grow carnations under glass all summer.

John Didier, Chicago, is growing 35,000 plants, an increase of about seventeen per cent over last year. His leading variety is Lizzie McGowan, of which he has 8,000 now on his benches. Of all the novelties he considers Evanston the best and is growing 6,000 of them.

Emil Buettner, Park Ridge, Ill., is growing 15,000 carnations, principally Wm. Scott, Flora Hill and Lizzie McGowan. He has planted only limited numbers of the newer sorts and has discarded Portia, deeming it too small for a profitable commercial variety. With Mr. Buettner Scott and Hill have made the best growth.

Weber Bros., Chicago, have 16,000 plants in their houses, divided as follows, 4,000 Scott, 4,000 McGowan, 5,000 Daybreak, 1,500 Tidal Wave, 1,000 Argyle, 500 Mrs. Bradt. They have for the past three years grown a sport of Lizzie McGowan, but of the color of Argyle, which gives unusually large flowers and which they prize very highly. Their stock is all in good condition.

Reinberg Bros. are delighted with the way stock is coming on at their big establishment at Summerdale. Their white and pink blooms have rarely been excelled at this season of the year and their cut is increasing rapidly. They grow 13,000 Scott, 11,000 McGowan, 8,000 Nancy Hanks, 7,000 each of Pingree, Jubilee and Flora Hill and lesser numbers of many standard and new sorts. They have sold many thousand field grown plants this fall and are still making large daily shipments.

The Chicago Carnation Company, which has its establishment at Joliet under the management of James Hartshorne, has but recently completed the planting of its new houses. There are 40,000 carnations on the benches, principal among them being 6,000 Jubilee, 4,000 Mrs. Bradt, 4,000 Victor, 3,000 Flora Hill, 2,000 each of Gold Nugget, Mrs. Jas. Dean, Evelina, Argyle and Daybreak, 1,000 each of Empress and Mrs. Joost, with lesser numbers of many other sorts. They have about 1,200 tested seedlings and 300 which are receiving their first year's trial. Their stock is all in fair condition and of all the new varieties Mr. Hartshorne finds Evelina most promising.

THEORY VERSUS FACTS.

Perhaps some of us carnation enthusiasts are "too previous," but we are not afraid to back down if it is necessary to do so. Were all our ideas successes the business would soon become so monotonous that I, for one, would quickly get out of it.

In the future I shall make a distinction between what I know to be a fact and what I think to be a fact. If any of the AMERICAN FLORIST readers have been misled by my statements I humbly beg their pardon and assure them that it was not from an exalted idea that I know it all, but simply an oversight in not making the distinction above mentioned.

My theory that a carnation grown indoors continually is unfit for propagation is a theory not based on my own experiments, but on such observations as I have been able to make. I have visited quite a number of houses that are devoted to carnations grown indoors all summer and have yet to see the house that I would exchange for one of my own filled with field-grown plants, and I certainly would not want cuttings from any of the indoor stock that I have been fortunate enough to have seen growing.

I am quite as anxious as anyone to be able to grow my stock inside during the summer, as it would, I am sure, on the quantity I grow, mean a saving of anywhere from $500 to $1000 annually. If we could have a paper read before the American Carnation Society by the man who can make them "grow like weeds" and one by Mr. Rudd, both on indoor culture and their methods of procedure, perhaps some of us novices could get an idea how to start on the road to success.

My theory, which is to be designated by a "twelve-inch label," is not a theory, but a statement of natural laws and facts. Perhaps the man who propagates from forced and stimulated stock season after

ESTABLISHMENT OF JAMES MORTON, CLARKSVILLE, TENN.

season can eventually work up a variety, but I very much doubt it. If anyone who is interested in building up a variety will read my article on pages 143 and 144 of the AMERICAN FLORIST he will see that I am careful to state that "the plants should be grown along in a moderate temperature and allowed to bloom, then if there are any plants that produce inferior flowers they should be pulled out." It would certainly be "bosh," and worse than that, to grow them cold and not allow them to bloom, for in that case there could be no selection of the fittest plants and no building up of the variety. No man who started to build up a variety would be so foolish as to allow himself to overpropagate, for he would in this case be defeating his own ends.

ALBERT M. HERR.

Evergreen Lodge.

This is the name by which the commercial establishment of James Morton, Clarksville, Tenn., is known. Mr. Morton took possession of the place a little over a year ago, and within that period he has entirely remodeled it, adding two new greenhouses 20x125 feet, with all modern improvements. The place is now considered one of the most attractive and best equipped in the south.

ROSES.

PRACTICAL ROSE GROWING.

One of the most successful rose growers in the vicinity of New York City is Ernst Asmus, of West Hoboken, N. J. His place is about an hour's ride by ferry and horse car from the metropolis and those interested in rose growing or forcing any kind of flowers under glass should have his name near the head of their visiting list. There are several large ranges of houses, all running east and west, and all, or nearly all, especially the new ones, even span.

It is the new style houses that especially attract one's attention. On entering one of these from the shed it is like going out of doors, there is such a flood of light. There is so little to obstruct the view that one can see into and through the second and even the third adjoining house, although each is separate and complete in itself, six feet from its neighbor. There is no eave sill. These new houses are seventeen feet wide by 108 feet long, sides five feet high, even span, with seven and one-half inches rise to the foot. The extreme width of each house at the eaves is seventeen feet six inches. The glass from the roof overlaps the thirty-inch glass on the sides about one-fourth of an inch, which Mr. Asmus says is sufficient to carry off the water, which drops to the ground, there being no gutters. The sides have but one pane of glass sixteen inches wide by thirty inches long, which slants three inches from the perpendicular until it meets the roof. This prevents the water from running down the sides and also seems to reflect light into the house. About thirty inches of woodwork (weather boarding) completes the sides.

The amount of light gained by substituting glass for wood on the sides and doing away with the cumbersome sill is astonishing. The ventilating apparatus is of Hitchings' make, the sash being hinged at the top. The rafters are of bent wrought iron fastened into cast iron bases, an idea of Mr. Asmus'. The only woodwork about the structure is the ridge pole, the light sash bars and the weather boarding. This type of house has been evolved gradually from the careful observation of the most practical growers. For years horticultural builders went ahead without consulting practical florists and erected houses great architecturally but not especially adapted to forcing plants. When the brightest men among the growers and the best greenhouse builders got together this question of practicability was solved in the houses just described.

In these houses there are two five-foot eight-inch ground beds with three-inch concrete borders separated in the center by a fifteen-inch path. The side walks are twenty-four inches wide, next the glass. The heating is by steam, all the pipes being attached to the woodwork at the sides except two flows which are laid under the center path, made of wooden strips, and then return under the center of each bed. The foundation for these beds is of stone with some six inches of soil. The drainage by this system is perfect; the roots get down among the cool stones and it does them a lot of good, so says Mr. Asmus.

The roses are mulched with old manure as soon as planted, so as to get a free growth at once, the wood being hardened after as desired. Liquid manure is used after the holidays, none ever being given to young stock. A bench of Meteors is planted in pure soil, no manure, to see if it would have any effect in doing away with the bull heads so common to this variety. A house of carried-over Beauties is full of growth but not producing as many buds as appeared on new stock. A house of the new rose, Liberty, grafted on Manetti and planted in June has made a very strong growth. Mr. Asmus thinks this will be a winner, as it never produces a bull head, is brighter than Meteor in color, with the fragrance of La France and is fully as large. His own new rose, Columbia, is the most prolific Mr. Asmus has ever grown, he having cut twenty-two blooms per plant in a period of only two months.

When asked whether he thinks there is any advantage in grafting roses Mr. Asmus said he considers it a benefit for summer forcing roses, such as Kaiserin, but he is not so sure about those for winter forcing, although others have been successful. He believes Mr. Simpson has cut fifty-two Maids per plant from grafted stock, while on its own roots his best record is thirty-six. He also has cut sixty-six per plant from Morgan in a season.

Wherever he can in a rose house Mr. Asmus turns a side table into a path, as the side benches produce so many deformed buds and flowers with crooked stems. The life of a house is also lengthened by a free circulation of air next the walls. The evolutions of the business were clearly demonstrated here, in one instance by a lot of Brunners in boxes which were not to be forced again, as there is now so little sale for hybrids, and another change was seen in great piles of sash offered for sale cheap, yet the foundation of this successful man's business was laid under those very sash.

ROBERT KIFT.

BEGONIA KNOWSLEYANA.

Begonia Knowsleyana.

This variety makes one of the most graceful specimens for general decoration that has been met with so far. It is a free grower, and a profuse bloomer, and its habit is all that can be desired. It blooms at all seasons of the year. This is determined by the time the seeds are sown, or the cuttings started. It reproduces itself true from seed, as the illustration shows, which is made up of a dozen seedlings. The seed was sown September 18, 1897. These plants have been in full bloom for the past three months, and at present are finer than ever. Its origin and native place seem to be unknown. It is figured in the *Journal of Horticulture*. Vol. 3, Fig. 89, with an item from Wm. Taylor in the number of December 22, 1881, in which he says: "I first became acquainted with this begonia at Knowsley, the seat of the Earl of Derby, some twenty years ago, and it has been my companion ever since. I am of the opinion that it is a distinct species, imported by one of the collectors of a former Earl

of Derby. I often heard the laboring men speak of a botanist or collector who used to be allowed to attend to some of his own pet plants in the gardens, I forget his name, but it was a well known one. Was it Nuttall?"

One hundred and seventy-five seedlings were grown on here, and all proved to be like the parent. Some authors speak of this variety as being a hybrid, yet they tell us hybrids will not perpetuate themselves true from seeds. There is plenty of material here for discussion at some future time. But for the size the flowers could not be distinguished from those of B. acuminata. The color and form are identical. The leaves are two and three-eighths inches wide by four inches long. Flowers, males. two and three-eighths inches across; color blush white, reddish pink when grown out of doors.

JOHN COULSON.

Dracaena Terminalis.

This plant has never attained the popularity it deserves on account of its seldom or rarely being grown to the highest state of perfection in this country. As produced for the Covent Garden market in London, it is a great favorite and particularly so about the holidays, its brilliant colored foliage being in direct keeping with the festive period. It will stand liberal feeding; in fact some sort of stimulant is necessary to bring out its high color. From a cutting in the late winter or early spring a fine plant in an 8-inch pot can be produced for the Christmas trade, if kept growing right along without check. The usual method is to root from canes and then by successive shifts or planting out on a bench keep up a steady growth until a good sized plant is obtained. This is then cut and bound with moss in much the same way a rubber is treated. Roots soon make their appearance, when the cutting is removed and potted. This plant now has broad leaves from the pot up and when it attains its growth and color in the late fall, we have indeed a perfect specimen. Meanwhile the parent plant immediately shoots out and provides young stock in abundance. It is thought this method will soon provide enough stock to render the importation of stock canes unnecessary.

K.

Hardy Herbaceous Plants.

Now that the very hot weather has left us the flowers are showing up to better advantage. We notice that aster Mackii, said to be from Europe, does not grow more than one and one-half to two feet high; it is compact in habit. The individual flower heads are large, very regular, and produced from the middle of August to the middle of Semptember; color bright purple-blue. Helenium autumnale superbum attracts attention with its dense clusters of bright yellow flower heads, which will continue in beauty till cut off by frost.

The different species and varieties of helianthus give us variety of habit and different shades of yellow, varying from light lemon to bright gold. H. mollis has distinctive woolly stems and foliage with lemon yellow flower heads of good size. H. decapetalus forms dense clumps three to five feet high and is covered almost from the ground with small, bright lemon colored flower heads. H. multiflorus Soleil d' Or makes similar masses of growth, with large leaves, and produces an abundance of large, double, deep yellow flower heads, which are good for cutting from August till frost. This needs covering with some light material in exposed situations in this section. H. giganteus is one of the tallest of the family, growing from eight to ten feet high; the foliage is long and narrow and the innumerable lemon yellow flower heads are produced on branches from quite near the ground H. orgyalis grows to the height of eight to twelve feet, and has long narrow foliage. The flower heads are produced nearer the top, with yellow ray florets and black disks. R. laciniata var. Golden Glow is so well known now that it does not need a description. Its only fault as compared with Helianthus multiflorus plenus is that it does not have such a long flowering season. In other respects we think it far superior for cutting and border decoration. The stems are rather bare, but this is easily remedied by having it at the back of, or surrounded by, other plants.

DRACÆNA TERMINALIS PLANTED ON BENCH FOR RAPID GROWTH.

are of a bright golden yellow and are not developed till H. giganteus is nearly through flowering.

The hardy varieties of herbaceous hibiscus are showing up grandly, as they have been for several weeks past. The foliage is handsome and the flowers very showy and unique in appearance. H. militaris grows from two to four feet in height, and produces salmon pink flowers four inches in diameter. H. Moscheutos attains the height of three to four feet and produces flowers fully six inches in diameter, which vary in color from light pink to clear rose pink. H. Moscheutos Crimson Eye differs from the type in having pure white flowers with a dark crimson eye; the flowers expand more fully and show their full size and the foliage also differs in having a distinct bronze tint. All the hibiscus mentioned require a deep rich soil and to fully develop must not be allowed to suffer in the least from dryness.

Liatris pycnostachya is a distinct late summer flowering species, growing four to six feet high and producing long cylindrical spikes of purple lilac flowers. Pentstemon Lyonii is similar in appearance to P. glabra, turtle head or snake head, but differs in having clear rose purple flowers; height one to two feet, foliage broadly lanceolate, dark bright green flowers produced in threes at the axils of bracts.

Rudbeckia subtomentosa sometimes catalogued as Helianthus subtomentosa, is a very handsome strong growing fall flowering species, height four to six feet. The foliage is divided somewhat like that of R. laciniata, but is of a darker green and the short hairs give it a slightly glaucous tint. The flower heads are large,

Silene Schaftæ is showing up well in the front row, and will continue covered with its pink flowers till frost cuts them off. It forms neat little mounds of small bright green foliage. Veronica longifolia var. subsessilis is about over now, but its long spikes of purple blue flowers have shown up well for the last month. It grows to a height of two to three feet and has handsome, dark green, lanceolate, crinkled foliage. The flower spikes alone are quite often considerably over a foot long and have several branches. It well deserves the name of giant speedwell.

Massachusetts. R. N.

Rudbeckia Golden Glow.

In the issue of this journal for October 24, 1896, this plant, then a novelty, was illustrated. Nearly two years later I again photographed the same group and the picture is here reproduced. This species has now been widely disseminated, forming one of a trio of most excellent recent introductions, Hydrangea paniculata grandiflora and Clematis paniculata being the other two. It is a singular fact that they all bloom late in the season, when most needed, and are all of the easiest culture. Each requires an ample supply of moisture for the best results, and are perfectly hardy. Luckily they combine three divisions of plant life, the shrub, the perennial and the vine. Japan furnishes two of them and the western prairies the third, the Rudbeckia laciniata fl. pl.

We are all familiar with the black-eyed Susan, the Rudbeckia hirta of the botanists. R. laciniata is a near relative, and in its typical form somewhat resembles it, except that the disk flowers, those minute blooms covering the cone, are a dull

greenish color, instead of yellow, and the whole flower larger. In the doubling up of the Golden Glow, these disk flowers have changed into ray flowers. The black-eyed Susan will thrive in dry soil, but the other being indigenous to the borders of swamps and low meadows, requires a fair amount of moisture. The origin of this double form is yet unsolved. About 1894 John Lewis Childs found it in his grounds among some unknown plants sent him by some of his customers. From it he increased the stock that has, in the main, reached the gardens of the United States and Europe.

While I bought three plants in the spring of 1896 from Mr. Childs, I had three given me in the fall of 1895 by Mr. Jensen, the superintendent of Humboldt Park, Chicago, who called it a double R. laciniata. Mr. Childs gave it the name Golden Glow, and I bought from him in order to compare it with those received from Mr. Jensen. They proved identical. Mr. Jensen had seen, in the fall of 1895, a large clump of it in the garden of a German in Chicago who had received it a year or so before from a relative, and traded some geraniums for a few roots. This traces it back to 1893 or 1894. At this latter date it was blooming both in Mr. Child's place and in Chicago.

A writer in an English paper about a year ago claimed that it was introduced to English gardens nearly twenty years ago under the name R. lævigata. Mr. Wm. Falconer, of Schenley Park, Pittsburg, Pa., dispelled this illusion in a clear and forcible manner. The mere fact that a plant so attractive in all its parts, so hardy in constitution, so readily grown and rapidly increased, was unknown in this country until within the past few years, even in the largest collections and among the most intelligent professionals and amateurs, is evidence enough that it was not known in English gardens twenty years ago.

The group illustrated is composed of the three plants obtained from Mr. Childs which were placed in their present position in the spring of 1896. Some young plants from the outside of the group have been taken away. The group is supported and protected from damage by the winds by an iron hoop four feet in diameter placed about four feet from the ground and fastened to four strong stakes set among the plants. This is put in place when the plants are some five feet high. The hoop—which is of round iron—is slipped over nearly all the plants. Enough of the outer row of stalks are left outside the hoop to hide it and the stakes; these are then distributed evenly along the hoop and tied loosely, allowing each stalk three or four inches play. When a heavy rain accompanied by winds comes they are apt to become top heavy and may break. In such cases I run temporarily a heavy but soft string around the whole group, well up towards the top, and draw it in quite closely—thus bunching it as one would a sheaf of wheat. This is removed when the storm is over and the blooms dried off. In this way one stalk supports the other and damage is seldom done. It is such a striking ornamental group upon the lawn, that it pays to devote some extra care to it. The drip from a lawn hose connection is carried under this group by tiles, thus affording it an extra amount of moisture. Where plants are not given enough water the blooms are smaller.

Mr. A. Herrington, of New Jersey, is blooming this year the English plant under the name of Autumn Glory, and we would like to hear from him. W. C. E.

Advertising Exhibitions.

It might seem to the enthusiastic amateur horticulturist, or even the professional florist and grower, that the promise of rare combinations of fragrance, beauty and novelty, as provided by the annual chrysanthemum and other shows, would be sufficient to attract attention and insure attendance, but it falls a long way short of awakening public interest in these prosaic and practical times when the best advertising medium is the one that penetrates every nook and corner of the community and captures the temporary or permanent remembrance of the observer. This has been drummed into the different organizations and individuals who have directed the affairs of these great exhibitions throughout the country by bitter and costly experience, for it is natural to infer that public affairs and busy commercial as well as social interests will pause without special solicitation long enough to view the feast and enjoy the wealth of harmony and fragrance, wherein lies a mistaken judgement, and of late the question of the best form and method of advertising an exhibition has become an important one.

Local conditions have an important bearing on the subject, especially with regard to the attitude of society toward the exhibition, in some parts of the country the show being considered the principal social event of the year, in others of equal interest and attractiveness to all grades and classes. First of all, under any and all circumstances, comes the inestimable value of the daily newspaper, with the valuable assistance of weekly and even monthly publications, in centering public interest on the approaching exhibition and holding it there. To obtain full results the entering wedge should be driven months prior to the dates selected for holding the show, and the secretary of the local organization can do no better work for the success of the show than by sending to the newspapers newsy little paragraphs every few weeks during the entire year. The value of this is apparent when it is realized that popular interest, not among the horticulturists, florists and allied forces, but with the great outside public, who know nothing of flowers and plants but their common names and attractiveness, is increasing every year, and the interest is stimulated to the expectant point by this very process. Again, the amateur horticulturist finds an incentive to prepare for an exhibit or possibly indulge in the extravagance of some particularly fine importation.

But the real advertising begins with the near approach of the exhibition. The plans formulated during the year are outlined in the newspapers, dates, location, scope and main features are incorporated in articles that are increased in length and information-dealing material, accom-

RUDBECKIA LACINIATA FLORE-PLENO.

panied by illustrations of anything that has direct bearing on the event. Of special importance are the novelties and the unusual features to be represented. Preliminary catalogues must be liberally distributed and the special classes and exhibits made prominent. A certain amount of careful bill posting should be done, according to the locality and custom. To properly bill a city like Chicago would cost several hundreds of dollars, but an artistic and appropriate design for twenty-four sheet, ten sheet, three sheet and one sheet posters, and the subject affords untold opportunity, can be used to great advantage, selecting prominent locations in the different parts of the city for this display. When it comes right down to the most direct and valuable advertising and a limited fund for the purpose, the newspaper and bill posting cover the principal points, although street banners, street car placards, window streamers and other local mediums have their value. Then comes the all-important work of the press agent, who has already told the community of the possibilities and probabilities of the exhibition. Novelties, competitive displays, special decorations, presence of notables and innumerable items from day to day sustain interest when exploited and the more variety that can be added as the exhibition progresses, the more the show advertises itself. Fakes or other illegitimate features may arouse temporary interest but are apt to have bad results. In all instances local interest should be carefully observed, especially the advertising mediums, of which the newspaper is the most valuable in any event. GEO. S. WOOD.

Notes on Watering.

In your issue of August 20, "E. L." asks: "At what temperature does water do injury to plants growing under glass?" He means, of course, to inquire how low the temperature of the water may be without causing injury. After two years' endeavor to solve this problem the writer feels competent to make a few general statements:

First. Water at 35° Fahrenheit does not injure coleus, begonias nor geraniums.

Second. Similar plants treated with water at 50° Fahrenheit grow equally as well as those watered with water at 65° and 86° Fahrenheit.

When this work was begun the station greenhouse contained only a general collection of bedding plants besides a few roses and carnations. As the latter were bedded out it was determined to select the above named species for trial. In order to start at the beginning, cuttings were selected from healthy plants and put in sand in small flats two and one-half inches deep and these placed on a propagating bench, side by side. Twelve boxes were prepared, four of coleus, four of begonias and four of geraniums. All possible care was exercised in order to have the cuttings as nearly uniform and vigorous as possible, and in order to accomplish this the cuttings of each species were all taken from the topmost shoots of a single vigorous plant. After the cuttings were set, one box of each sort was watered with water at 35° Fahrenheit, one at 50°, one each at 65° and 86°. All the cuttings were thoroughly drenched as needed, and, when rooted, were potted, properly labeled and the watering continued in the same manner for several weeks.

The temperature of the house was kept at 60° at night during the first part of the experiment and reduced to 55° later. The coldest water was obtained by using a sufficient quantity of finely crushed ice to bring the temperature of the water down to the required point. At every watering the foliage was sprinkled as well as a sufficient quantity given at the roots.

The lots were closely compared from time to time by measuring the height of the plants and it was found that all grew well but that the 50° and 86° lots were growing taller than the others and that between the 35° and 65° lots there was but a slight difference in favor of the 65° lot.

The different lots were always subjected to like conditions of light and heat, and yet, as a rule, the warmer water appeared to induce an elongated or "drawn" growth as compared with the cold water lots, which always appeared short jointed and stocky but well colored and healthy. It was remarked during the course of the experiment that these were as large as the warm water plants, and at the close this was found to be true when the plants were all weighed and the results showed a slight gain in favor of the 50° lot.

The temperature of the soil about the roots of the plants was determined both before watering and at intervals afterward. While the soil temperature was perceptibly lowered by the application of ice water it soon regained its original temperature, the time required depending upon the temperature of the house, sunlight, etc. In sunlight with a house temperature of 75° it required but three hours to rise to the starting point.

In stating these results all tabular detail as to measurements and thermometer readings have been purposely omitted. These, with a full account of the work done, may be found in the fourteenth annual report of the Wisconsin Experiment Station, pp. 316–321.

The facts here noted, with much intangible evidence such as comes to every one who follows the growth of plants, convinced me that the temperature of water as applied to plants under glass had but little if any influence on growth if between the limits of 35° and 100° Fahrenheit. In order to test this theory further trials were made during the past year both under glass and outdoors. Unfortunately the results of these experiments can not be given now as the material for the fifteenth report is now on its way to the printer.

At a later date I hope to be able to place before the readers of the AMERICAN FLORIST facts and figures that will give much more light on this subject. In closing I will repeat that after two years' attention to this subject I am convinced that the commoner greenhouse plants may be watered freely with water at or below the house temperature without fear of injury. FREDERIC CRANEFIELD.

Madison, Wis.

New York.

FALL EXHIBITION OF THE AMERICAN INSTITUTE.—A SPLENDID DISPLAY OF DAHLIAS.—SANDER'S NEW ACALYPHA SANDERI CREATES A SENSATION.—FLOWER TRADE LOOKING UP.—A PORTO RICAN EXPEDITION.—EARLY CHRYSANTHEMUMS.—AUCTION SALES—RETURNING TOURISTS.—E. V. HALLOCK TO ADDRESS THE FLORISTS' CLUB.

The horticultural exhibition of the American Institute opened on Monday, September 26, at the Academy of Design on Twenty-third street. All available room was well filled with exhibits of plants, flowers, fruit and vegetables. The American Dahlia Society co-operated in this show, hence dahlias predominated in the cut flower department. The displays of these brilliant flowers were very extensive, collections of innumerable varieties in all classes being shown by H. F. Burt, Lothrop & Higgins, W. P. Peacock, Rowehl & Granz, W. C. Winter, Rev. C. W. Bolton, W. H. Maule, E. D. Adams, F. R. Pierson Co. and others. Promiscuous garden flowers were staged by John Lewis Childs and A. Herrington. In the collection shown by the latter a beautiful flower of Gerbera Jamesonii attracted attention. The flower is single with long bright vermilion rays, and this is said to be in its first appearance in this country.

The sensation of the plant section was Acalypha Sanderi, now introduced by Sander & Co., and grown for this occasion by Julius Roehrs. Specimens of various sizes and ages were shown, all fully furnished with the pendant crimson, chenille-like tassels of bloom which are characteristic of this plant. The flower racemes depend from the axils of each leaf, 12 to 24 inches in length. Mr. Dinmock assures us that this remarkable plant is never out of bloom, hence its value as an all-round decorative plant cannot be overestimated. A large specimen of it was also shown by D. Willis James, Wm. Duckham, gardener. Mr. James' elegant collection of stove and greenhouse plants also included Dracæna Godseffiana and an enormous specimen of Dracæna Sanderiana.

H. A. Dreer showed a remarkable group of dwarf Japanese evergreens and filled several tanks with aquatic flowers, the borders of which were finished off nicely with decorative plants. Other interesting features of the show were caladiums from E. D. Adams, Geo. Hale, gardener; cannas and dahlias in pots from A. L. Miller, celosias, begonias, caladiums and ferns from Mrs. H. L. Terrell, J. Dowlen, gardener; and adiantums from Hon. C. N. Bliss, N. Butterbach, gardener.

Wholesale dealers talk encouragingly of present conditions in the cut flower trade, which are as good as could reasonably be expected at this season, as indicated by the experience of past years. Receipts are not heavy and stock is moving fairly well, extra good material being the compensating feature. The retailers seem inclined also to a sanguine view of the situation and instance advanced activity in "theatre work" as evidence that a season of liberal flower buying is approaching. The standard of quality demanded, however, continues to advance steadily, and every recurring season finds the retailers and their customers more and more fastidious and exacting.

An expedition is about to be dispatched to Porto Rico to study the flora of that island and collect specimens and information for the New York Botanical Garden. The work will be entrusted to Mr. A. A. Heller, who has recently returned from a similar trip to the Sandwich Islands, and it is understood that Cornelius Vanderbilt has volunteered to pay the entire cost.

Early chrysanthemums are beginning to appear in the florists' windows. Marquis de Montmort is the variety generally seen. John Young is receiving some good specimens considering the earliness of the date.

In the absence of J. P. Cleary at the Chicago sale his brother "Andy" is wielding the hammer. He is a star for a beginner, and his future as an auctioneer seems assured.

At the meeting of the New York Florists' Club on October 18 Mr. E. V. Hallock,

who has recently returned from a European trip, will give an informal talk on "Impressions Abroad."

On October 4 there will be a big sale of fine stock from Robt. Craig and W. K. Harris, of Philadelphia, at Wm. Elliott & Sons' auction rooms on Dey street.

Wm. Young is sending in from Clifton some unusually fine flowers of Kaiserin Augusta Victoria rose.

George Stumpp and son arrived on the steamer Kaiser Wilhelm du Grosse on Tuesday last.

Thos. W. Weathered arrived well and hearty on Saturday, 24th inst.

The San Jose scale has appeared on many trees in Central Park.

Visitors in town: Wm. Tricker, Riverton, N. J.; S. McClemens, A. M. Murdock and Walter Breitenstein, Pittsburg, Pa.

Boston.

STOCK SHORTENING UP.—LIGHT DEMAND.—GOOD SCOTTS SCARCE.—A FISHING TRIP.—A FAILURE.—LOCAL BREVITIES.

Local business is not especially active but the cold nights recently experienced have had the effect of keeping down the production, particularly of roses, and while the demand is rather light yet there is no accumulation of stock in wholesale hands. Carnations of real good quality are hard to find and where they are to be had they bring excellent prices; this is true of Scott perhaps more than of any other variety. Tuberoses are abundant and good. Asters have run out and such as are offered are very poor indeed. Chrysanthemums have not made their appearance yet in this market to any appreciable extent.

On Thursday a party of select officials of the Old Guard enjoyed a smelt fishing excursion on the good ship Fairy, commanded by Geo. A. Sutherland. All are doing well and there are a few more smelts left in the bay.

Geo. B. Redican, the "Thorndike" florist on Boylston street, has not been seen by his creditors since Friday of last week. Liabilities are estimated at $4000 and the assets are in the air.

The choice collection of orchids owned by W. W. Lunt has been sold to W. A. Manda.

The Massachusetts Horticultural Society holds its annual election of officers on Saturday, October 1.

Fred. W. Hiatt has been granted a discharge in insolvency by Judge Grant.

Welch Bros. are receiving and finding a fairly good sale for some very fine nymphæas daily.

Visiting Boston: Ulfred Rehder, Erfurt, Germany.

Chicago.

A BUSY WEEK IN LOCAL MARKETS.—SOME SPLENDID ROSES.—CARNATION CUT INCREASING.—CHRYSANTHEMUMS AND VIOLETS.—NOTES.

The past week has seen a considerable increase in both supply and demand, although the call for good flowers was better than that for stock of indifferent quality, and as a consequence really choice blooms advanced in price while the inferior ones declined. As is ever the case the rose market was that which received most attention, and of roses the star which holds the center of the stage is the American Beauty. There have not been enough of these to supply the demand for first-class stock and shipping orders are on file for the early days of next week which promise to cause a famine in the Beauty market.

Of Bride, Bridesmaid, Meteor, Kaiserin and Perle there has been a sufficiency, although in the first two sorts the quality has not been all that could be asked for. Better Kaiserin or Meteor than those the growers have been sending in during the last few days would be hard to find. The warm nights are chargeable with the open condition which has hurt the value of a goodly portion of the cut of all varieties.

Carnations have poured into the market this week, and have been of all sorts and qualities. As usual white and pink varieties have had the preference and some of the fancies have sold at from 2 cents to 3 cents each. But the average returns have been less than $1 per hundred and many inferior flowers have been sacrificed to the fakirs.

The chrysanthemums and violets of the week have come to the Kennicott Bros.' Company from E. H. Blameuser, Niles Center, Ill. The blooms sold well. Although the first flowers have made their appearance very early this season it seems to be the general report that the bulk and best of the cut will be somewhat later than usual.

Mr. Johnson of the local committee of the Chrysanthemum Society of America writes stating that the blooms of a new seedling, mentioned in our last issue as having been received from California, did not arrive, and are now reported to have been in a railroad wreck on September 14.

Siebrecht & Son disposed of a large quantity of stock at their auction sale on Monday, but although John P. Cleary officiated in his usual taking style, it brought only moderate prices and there was quite a number of plants on hand Tuesday. Some of these were sold during the week, and the sale, private and by auction, will be continued daily by J. Austin Shaw and John Thorpe until everything is cleared up.

Frank Beu, who had been employed at the greenhouses of Bassett & Washburn at Hinsdale, has leased the establishment of Keller & Hitzler, at 2880 North Fortieth avenue for a term of five years. He expects to add several large houses early in the spring.

Emil Buettner has accepted the invitation of the Florists' Club to address the members at their next meeting, October 7, and will tell of the many things which interested him upon his summer's trip to Europe.

Hundreds of friends in the trade extend their sympathy to George Stollery, whose little daughter, aged 2 years and 8 months, died September 21.

T. D. Mosconesotes was unable to supply sufficient proof to convict the three men whose confidence game cost him $1200 and they are again at liberty.

Visitors: Arthur W. Webster, Centralia, Ill.; Frank Stuppy, St. Joseph, Mo.; D. S. McKinstry, Kankakee, Ill.; J. G. Heinl, Terre Haute, Ind.; B. H. Ives, Albuquerque, N. M.

Cleveland.

STOCK IS DECIDEDLY SCARCE.—ROSES AND CARNATIONS THE ONLY BLOOMS IN MARKET.—FLOWERS FOR A FUNERAL.—GROWERS DO ROUTINE WORK.

Flowers have been decidedly scarce, owing partly to the weather, which has been wretched, and partly to the natural shortage which nearly always occurs about this time of year. Quite a noticeable revival in business also has contributed to bring about this condition.

Asters have entirely disappeared, as well as gladioli. Roses and carnations constitute almost the entire stock in trade just now. Prices are stiffening a little, indeed quite noticeably in the case of carnations, which wholesale at from $1 to $1.50 per hundred, while some few extra good ones go a little higher.

Probably no funeral ever occurred in Cleveland calling for so many flowers as that of William Edwards, a valued citizen of wide acquaintance, not only in Cleveland but throughout the country. Flowers came from friends in every walk in life and differed equally as widely in appropriateness and beauty, but the constantly increasing use of simple and natural arrangements was very evident and the greater part of the offerings were bunches, garlands and wreaths of various sizes. American Beauties were used in large numbers. In the set pieces a large scroll was one of the best. A huge broken column was also seen that was very good. There were some arrangements of orchids and lily of the valley, but by far the greater part of the work was done with roses and carnations.

Among growers not much outside of routine work is going on now. Many are still busy getting in their carnations. The earliest of the chrysanthemums will soon be in condition to cut. A.

Philadelphia.

PROSPERITY SMILES UPON THE QUAKER CITY.—STOCK CONDITIONS.—PLANT TRADE BARGAINS.—NOTES AND COMMENTS.

Things have begun to hum, not very loudly to be sure, but the sound is quite apparent. Beauties have actually been scarce and the mid-winter trick of telephoning out for some to ship by express and meeting the growers at the station has been resorted to in order to make sure of a stock for the day's business. The highest local price for 24-inch stems is $1.50 per dozen, 12-inch stock bringing from $4 to $6 dollars per hundred. Teas are improving although most of the stock offered does not bring more than $3 per hundred. Whether this market will take Meteor in quantity is to be ascertained by the Floral Exchange devoting its entire rose growing range, fifteen large houses, to this rose. Robert Craig & Son's grafted Kaiserins are now in full crop and they are sending in quantities of fine, long stemmed stock. A little mildew has begun to be seen on some growers' stocks and detracts considerably from the appearance and price.

Carnations are a little better but have a considerable distance yet to go before they will reach first quality. Most growers say their stocks are looking well. Lily of the valley is in good supply and J. H. Lukens, of Burlington, has had some good stock the past week. He says that stored stock has done very well with him this summer, the percentage of loss being small. He thinks it should receive moisture enough during storage to keep the pips plump and firm. John Burton is commencing to cut his house of Asparagus Sprengerii; the price is $2.50 to $5 per hundred sprays according to length, the short sprays being twelve to fifteen inches and the long twenty-four inches and over.

The plant men are becoming busy with the local store trade, rubber, and Boston ferns taking the lead. A lot of 500 twenty-four to thirty inch rubbers, together with jardinieres, were advertised at Wanamaker's this week for $1.25 each. Dreer offered a bargain the past week in Cocos Weddeliana, a number in 6-inch pots. They were original seed pots but had become too large to transplant into

single pots. The plants are about eighteen inches high and the number together gives them a bushy appearance. Some palm men say the cocos is done as a money maker as at the present low price there is scarcely more than a new dollar for an old one.

M. Rice and Jean Weiss returned the past week from a fishing trip into the wilds of Pennsylvania and you should hear Rice's big fish stories.

The next meeting of the Florists' Club, October 4, should call out a full house for H. F. Michell will tell of what he saw when abroad this summer. Mr. Michell is a close observer and from his thorough knowledge of the business he has no doubt stored up many valuable points that will be of great interest.

Wm. J. Baker was the first to handle chrysanthemums, having a half dozen very fine Lady Fitzwygrams on Thursday. K.

San Francisco.

BUSINESS IS IMPROVING.—CHRYSANTHEMUMS BRING GOOD PRICES.—ROSE QUALITIES.—CARNATIONS IN SHORT SUPPLY.—VIOLETS.—PERSONALITIES.

Business has picked up considerably and may be said to be quite good. Prices are holding up nicely and most of the florists are receiving good value for their good stock. Chrysanthemums of very excellent quality can be had, but as yet the supply is very limited. Last week they brought $5 to $6 per dozen at retail. M. Lynch is the only grower bringing in outside chrysanthemums, Mrs. E. G. Hill, Mrs. Whilldin and an early white being the sorts sought for. Mr. John Carbone, of Berkeley, is still bringing in his large white from the greenhouse, which still commands the highest figures. The Chinese growers, who raise immense quantities of cheap chrysanthemums in the suburbs of San Francisco, will, it is said, not be heard from very much this coming season on account of the scarcity of water for irrigation during the past summer. This will probably benefit the trade in many ways.

Now that the weather is a little cooler the quality of the roses we are receiving is much better than for some time past. Some fine Beauties are being handled and the quality of Bridesmaid is as fine as could be desired. Cecil Brunner is also largely called for. As most of the growrrs have not begun to cut from their new carnation stock, the supply is limited, but the fortunate ones are being well paid for what they have. Minnie Cook is the finest, closely followed by Pingree. Portia is beginning to come in from the new crop and sells readily. The writer saw some excellent Princess of Wales violets this week. Marie Louise, however, is the favorite on account of its fragrance. Even at this late date some fine sweet peas can be had, but the demand for them is poor.

A. B. Westland has resigned his position with C. A. Baldwin at Westside.

Florence, the infant daughter of Andrew McDonald, the foreman at Peter Donohue's, died Saturday, after a short ilness.

Emile Serveau spent six days at Menlo Park last week

Frank Pelicano & Co. have had a magnificent display of ferns and palms last week, which was greatly admired by hundreds of visitors.

Chas. W. Beebe, of the Trumbull & Beebe Co., was in San Jose last week on a business trip.

The last meeting of the California State Floral Society was well attended and a chrysanthemum show was discussed, but not decided upon. It will be taken up later during this month.

Sidney Clack is sending some very fine American Beauties into the market. Mr. Clack has been very successful with this rose lately and his entire stock is in excellent shape.

J. T. Usler and family have returned from a prolonged eastern trip.

Chas. Navlet was in this city this week.

John H. Sievers has some elegant azaleas on exhibition at his Post street store this week. His tuberous begonias are still greatly greatly admired and proving great attractions to visitors.

METEOR.

St. Louis.

WARM WEATHER IS NOT WELCOME.—CHRYSANTHEMUMS ARE IN.—MORE SHOW PLANS.—BIG BANQUET DECORATION.—CALL FOR FALL BULBS.

The return of warm weather has had the effect of stopping the improvement in business mentioned in my last notes. It has likewise had an appreciable effect on stock. Roses are just now rather plentiful, and carnations are coming in more freely than for several weeks. Chrysanthemums have made their appearance in the market, and from a look over the growers' houses the earliest varieties will be in full swing within ten days.

The chrysanthemum show committee has in press the second preliminary list of prizes to be offered at our annual show, and those interested should address Emil Schray, 4100 Pennsylvania avenue, for a copy.

About the largest social function thus far this season was the banquet of the National Carriage Builders' Association at the Southern Hotel. The decorations were made principally of American Beauty, Bride and Bridesmaid roses. Plants were used all around the hall. The number seated was five hundred. Ellison & Tesson furnished the decorations.

The fall bulb trade has commenced and estimates are being called for in regard to the laying out and planting of beds more freely than at the same time last season. R. F. T.

Washington.

BUSINESS SHOWS SIGNS OF REVIVAL.—DEALERS ARE DECORATING.—FLOWERS AT A BANQUET.

Business prospects for the coming season look bright for this city and nearly all the growers have their stock in shape for the fall and winter. The store men are renovating their places of business, and all seem hopeful of a prosperous season. The annual fall openings of the dry goods and furnishing stores, add considerable toward making the florists active. At one such event this week, over 300 plants were used.

A notable event of the week was the reception and banquet tendered the Grand Chapter of the Order of the Eastern Star, at the National Rifles Armory, which was transformed into a floral bower for the occasion. The decoration was the work of A. Gude & Bro.

Wm. R. Smith is on his farm at Cameronia, Montgomery Co., Md. P.

Cincinnati.

PLANTING OF HOUSES IS COMPLETED.—BUSINESS EXCELS THE RECORD OF A YEAR AGO.—SPECIAL MEETING OF THE FLORISTS' SOCIETY.

Housing carnations and violets is about completed and we may look for first-class stock soon. Business is fair for the season and shows some improvements over the same time last year. Prices of flowers remain about the same as last week.

Samuel Morehead, of College Hill, has opened a flower store at Main and Canal streets.

The Board of Directors of the Cincinnati Florists' Society held a special meeting at R. Witterstaetter's September 28 to revise and map out schedules for our monthly shows for the ensuing year. The meeting was called to order by President Witterstaetter. After examining the greenhouse stock and the place in general, which is, as usual, in excellent condition, the boys were invited by their host to an elegant spread. A merry good time followed which will be long remembered with pleasure. H. SCHWARZ.

Rochester, N. Y.

Everybody was quite busy during the past week, but stock was not very scarce, excepting carnations. Some good asters are still in the market. The Japanese anemones are very plentiful, and the whites are used largely in designs at present. A few violets are seen here and there; the color is good enough, but in size they are hardly up to the average. Local growers are not in with their chrysanthemums as yet. Home grown roses are not any too plentiful; several growers are beginning to cut in small quantities, but the stems are rather weak, though there is not much reason to complain of the size of flowers. Some lots show signs of mildew, not very badly but just enough to impair their value; it is not safe to let the houses go without a little fire heat in such damp and cloudy weather as we have had here for the last two weeks. We have had one or two slight frosts, but not enough to hurt hardy outdoor stock.

J. B. K.

Marquette, Mich.

A visitor to this famous resort for hay fever sufferers finds business picking up and the outlook promising for a good fall trade. L. H. Stafford has overhauled all his greenhouses and everything is in fine condition. Two of his carnation houses have been planted in solid beds, the bench system being retained in the other. His plants are remarkably healthy.

I noticed a fine batch of that old favorite, Stevia serrata, that had been grown in 5-inch pots plunged in the field. They are beautifully symmetrical plants. The rose houses show beds which look fairly black with the strong young growth so dear to the hearts of all good rose growers. Of chrysanthemums Mr. Stafford has a fine lot. He has not gone into specimen plants. His idea is that it pays best to grow for the many rather than the few. C.

Providence, R. I.

The September exhibition of the Rhode Island Horticultural Society was held on September 21. It was primarily a display of dahlias, contributed mainly by H. W. Tarbox, Sam W. Lewis, H. F. Burt and others. Robert Laurie sent from Newport quite an extensive contribution of greenhouse and garden flowers in variety, and many local exhibitors were represented by displays of considerable extent. The notorious palm swindler made his appearance in Providence on September 20 and victimized John M. Sullivan to the extent of about $40. Afterward a portion of the plants were recovered, but the very slippery stranger has not been found.

THEY say our English daffodil visitor is spreading the yellow fever.

COAL is usually cheaper at this time of year than during winter and early spring.

MAYOR MOORES, of Omaha, telephone No. 55, has been removed from office by the supreme court.

EARLY chrysanthemums may be followed by violets, carnations, bulbs in pots or boxes, bedding stock or pot plants in variety.

IN response to a recent inquiry, J. H. Mears, of Enosburg Falls, Vt., sends blooms of Mme. Salleroi geranium. The flowers are of a pale pink shade and, as Mr. Mears remarks, very rudimentary.

THE *Gar leners' Magazine* states that Mr. Eckford has a natural hybrid between the garden pea and the sweet pea, two distinct species. It is not expected to prove valuable commercially.

JOHN F. RUPP, the primula man of Shiremanstown, Pa., sends us samples of a zinnia in which the central florets are light green and those of the external circles reddish. It is interesting, but not attractive. We do not remember to have seen anything of the kind before.

WE received last week in excellent condition a large box of handsome dahlias from W. W. Wilmore, the veteran grower of Denver, Col. It was evident from the samples that the soil and atmosphere of Denver suit the dahlia to a nicety. Mr. Wilmore is favorably known throughout the country as a specialist in the culture of this plant, which appears to be steadily gaining in popularity every year. All the varieties received from Mr. Wilmore were good, including Curio, bronze; Mrs. W. J. Bryan, lavender; E. A. Tunnell, variegated red and white; and John Elitch, deep red. The best of the assortment, however, was a large flower of the cactus type named Prince of India, of a rich crimson shade.

Catalogues and Cut Flower Price Lists Received.

Edward S. Schmid, Washington, D. C., aquarium requisites; H. F. Littlefield, Worcester, Mass., plant supports; Cleary & Co., New York, N. Y., sale; The Morris Floral Company, Morris, Ill., plants; Pinehurst Nurseries, Pinehurst N. C., plants and seeds; Fred'k W. Kelsey, New York, N. Y., trees and shrubs; The Dingee & Conard Co., West Grove, Pa., bulbs and plants; Cherry Hill Nurseries, West Newbury, Mass., pæonies; Bassett & Washburn, Chicago, Ill., cut flowers; Kennicott Bros. Company, Chicago, Ill., cut flowers; S. S. Pennock, Philadelphia, Pa., cut flowers; W. A. McFadden, Cincinnati, O., cut flowers.

Greenhouse Building.

Lawrence, Mass.—Lawrence Davenport, one commercial house.

East Jordan, Mich.—Porter & Kneale, one greenhouse.

Newton, Mass.—Geo. F. Stone, one greenhouse.

Louisville, Ky.—Lake View greenhouses, one house 25x100, one house 20x50.

Williams Bay, Wis—F. T. Manahan, conservatory 12x38.

Dalton, Mass.—Byron Weston, conservatory 23x25.

No. Easton, Mass.—John McFarland, one greenhouse.

Woodlawn, N. Y.—William Nilsson, commercial house 11x45.

Perkasie, Pa.—Benjamin Hedrick, one commercial house.

Hail Notes.

The Florists' Hail Association has recently paid Wm. Krumm & Sons, of St. Joseph, Mo., for over 5000 square feet of glass broken by hail on September 5.

Geo. M. Kellogg, of Pleasant Hill, sustained a slight loss by hail on September 15.

The New York State Weather Bureau reports extensive damage by several violent hail storms in northern and western New York this summer.

The Pitcher & Manda Estate.

John N. May has concluded his labors as receiver for the insolvent firm of Pitcher & Manda by a third and final dividend to creditors of 6 46-100 per cent, which makes the realizations of creditors 66 46-100 per cent of their claims. Mr. May found liabilities of $67,560.10, and succeeded in realizing $133,932.61 upon the assets at a cost of $89,029.11, leaving $44,903 50 for division against the liabilities. The creditors find every reason to congratulate themselves upon the success of Mr. May's management of the estate.

Importers' Troubles.

The gathering of importers at the appraiser's office in New York, noted in the last issue of the AMERICAN FLORIST, was certainly a most interesting and remarkable one. The lesson it seems to teach is that there should be room for some concerted and united action in the future on the part of those whose business it is to import plants and bulbs. To determine the proper market value in each individual importation—of Dutch stock even more than of French—would be an impossibility even for a man with a lifetime experience in the trade, and the fact that any one respectable house has been able to buy at low rates as compared with the invoices of other houses should have some weight as indicating what true market conditions are.

The claim of our appraisers that all dealers should pay duty on the same valuation and their method of getting at this by advancing prices of goods to a uniform standard can hardly hold good in the face of laws reading that every importer must pay his duties on the cost of goods, no matter what the market may be, and there will always be dealers who, in accordance with their purchasing power, will pay duties on higher values. What should be a proper market value might therefore be a subject to be taken in hand by the trade in advance of an expected crop, and very likely importers could then agree on a schedule of figures satisfactory to them and to the United States government without forcing the representatives of the latter to make changes in valuations unpleasant alike to both parties.

The matter of detention of perishable goods in the examiners' hands may, we are assured, be easily adjusted and the danger of loss reduced to a minimum if the importer will make prompt request from the collector of the port for wharf examination of his goods, agreeing to furnish the necessary labor required in the operation.

Coming Exhibitions.

[*Secretaries are requested to supply any omissions from this list.*]

BOSTON, Nov. 8-11. Chrysanthemum show, Massachusetts Hort. Society, Robert Manning, Sec'y, Horticultural Hall, Tremont St.

BUFFALO, N. Y., Nov. 9-11.—Chrysanthemum show, Buffalo Florists' Club. Wm. Legg, Sec'y, 1440 Delaware Ave.

CHICAGO, Nov. 8-12. Chrysanthemum show, Hort. Society of Chicago. Willis N. Rudd, Ass't Sec'y, Room 202, 185 Dearborn St.

ELMIRA, N. Y., Nov. 1-2. Chrysanthemum show, Elmira Hort. Society. R. R. Stockdale, Sec'y.

GERMANTOWN, PA., Nov. 7. Autumn exhibition. Germantown Hort. Society.

HARTFORD, CONN., Nov. 8-10. Chrysanthemum show, Connecticut Hort. Society. C. M. Rodgers, Sec'y, Beacon St., Hartford.

INDIANAPOLIS, Nov. 8-12. Chrysanthemum show, State Florists' Association of Indiana. R. A. McKeand, Sec'y, Garfield Park, Indianapolis, Ind.

MORRISTOWN, N. J., Nov. 1-2. Annual Exhibition, Morris County Gardeners' and Florists' Society. C. H. Atkins, Sec'y, Madison, N. J.

NEW BEDFORD, MASS., Nov. 3-5. Annual exhibition New Bedford Gardeners' and Florists' Club. Peter Murray, Sec'y, Box 104 Fairhaven, Mass.

NEW YORK, SEPT. 26-OCT 8. Sixty-seventh fair, American Institute. Dr. F. M. Hexamer, 52 Lafayette Place, Chairman Committee on Agriculture and Horticulture.

NEW YORK, SEPT. 26-OCT. 1. Annual Exhibition American Dahlia Society, auspices of American Institute.

PHILADELPHIA, OCT. 18. Chrysanthemum show, contest for the C. S. A. cup, auspices of Pennsylvania Hort. Society. David Rust, Sec'y, Horticultural Hall, Broad St. below Locust.

PHILADELPHIA, Nov. 8-12. Annual exhibition, Pennsylvania Hort. Society, David Rust, Sec'y, Horticultural Hall, Broad St. below Locust.

POUGHKEEPSIE, N. Y., Nov. 2-4. Chrysanthemum show, Duchess County Hort. Society. Arthur A. Loughren, Sec'y.

PROVIDENCE, R. I., Nov. 9-11. Chrysanthemum show, Rhode Island Hort. Society. C. W. Smith, Sec'y, 61 Westminster St., room 23.

ST. LOUIS, NOV. 14-18. Chrysanthemum show, St. Louis Florists' Club. Emil Schray, Sec'y, 4101 Pennsylvania Ave.

TORONTO, Nov. 9-12. Chrysanthemum show, Toronto Gardeners' and Florists' Association. E. H. Carter, Sec'y, Riverside Park, Toronto.

WACO, TEXAS, Nov. 10-12. Chrysanthemum show, Texas State Floral Society. Mrs. Louis Crow, Sec'y, Waco, Texas.

WORCESTER, MASS., Nov. 8-9. Chrysanthemum show, Worcester County Hort. Society. Adin A. Hixon, Sec'y, Horticultural Hall, 18 Front St.

Florists' Fire Insurance.

As it is now time to begin fall firing, it will be interesting to note the names of some of those who are members of the Florists' Mutual Fire Insurance Association. Among others are the Junction City Floral Co., Junction City, Kan., Chas. M. & Mary L. Farmer, Anderson, Ind., C. S. Battin, S. Charleston, Ohio, Hermann Staeps, Elm Grove, Wis., John Westcott, Philadelphia, Chas. D. Ball, Philadelphia, W. H. Culp & Co., Wichita, Kan., McCrea & Cole, Battle Creek, Mich., H. D. Caldwell & Co., Paris, Ill., The Storrs & Harrison Co., Painesville, O., F. J. Geist, Melrose, Mass., I. L. Pillsbury, Galesburg, Ill., Ella Grant Wilson, Cleveland, O., The Kemble Floral Co., Oskaloosa, Iowa, Frank Shaffer, Pana, Ill., M. A. Patten, Tewksbury, Mass., Stuart & Haugh, Anderson, Ind., A. M. Larder, Fredonia, N. Y., Carl Rauth, Springfield, Ill., F. R. Matthison, Waltham, Mass., Nick Zweifel, Milwaukee,

Wis., W. J. & M. S. Vesey, Fort Wayne, Ind., St. Louis Cut Flower Co., St. Louis, Mo., G. Van Bochove & Bro., Kalamazoo, Mich., H. B. Weaver & Bro., Wheatland Mills, Pa., Capt. J. J. Phelps, Hackensack, N. J., Jos. H. Cunningham, Delaware, O., M. Dummett & Son., Mt. Vernon, N. Y., J. G. & A. Esler, Saddle River, N. J., W. S. Nichol, Barrington Center, R. I., J. C. Vaughan, Chicago, Wm. Scott, Buffalo, N. Y., Jackson & Perkins Co., Newark, N. Y., Maplewood Cut Flower Co., Pleasant Hill, Mo., Adam Graham, Cleveland, O., E. A. Seidewitz, Annapolis, Md., H. W. Bond, Fort Wayne, Ind., Fred Busch, Minneapolis, Minn., Fred Dorner, La Fayette, Ind., Grohmann Bros., Saginaw, Mich., A. J. Pennock, Lansdowne, Pa., A. Gude & Bro., Washington, D. C., Wm. Bester, Hagerstown, Md., Th. Van der Meulen, Dunkirk, N. Y., Henry Michel, Marion, Ind., Dr. J. A. Mulford, Lebanon, O., James Horan, Bridgeport, Conn., Wm. Mann, Louisville, Ky., Chas. E. Heite, Kansas City, Mo., Geo. M. Naumann, Cleveland, O., Sonnenschmidt & Junge, Indianapolis, Ind., Jas. Bancroft, Cedar Falls, Iowa, James Frost, Greenville, O., H. W. Reiman, Indianapolis, Ind., E. H. Marshall, Sabetha, Kan., W. J. Miller, Pontiac, Ill., H. L. Phelps, Springfield, Ill., W. C. Stroh, Attica, N. Y., M. H. Wetherbee, Charles City, Iowa, A. S. Horn, Fremont, O., Mrs. O. G. McCormick, Logansport, Ind., Herman Niesner, Johnstown, Pa., The F. R. Williams Co , Cleveland, O., The Redfern Co., Whitehall, Mich., Carl Neuner, Louisville, Ky., W. C. Sabransky, Kenton, O., Mrs. F. E. Blair, Big Rapids, Mich., H. B. Greene, Lowell, Mass., J. O. Zimmerman, Pueblo, Colo.

Elmira, N. Y.

The first annual chrysanthemum exhibition of the Elmira Horticultural Society will be held November 1 and 2. The managers of the society succeeded in securing splendid exhibits of roses at the June show and of sweet peas in August, and the prospects are that the display at the coming show will be large and of exceptional quality. The leading feature will be the contest for the bicycle offered for the best new chrysanthemum, either seedling or sport, of any color, to be judged under the rules of the American Chrysanthemum Society, which require that it shall have been tested two years or more and that six blooms be exhibited. The winner is to be named the Eclipse of '98 and is to be disseminated under that name. Growers from all parts of the country are invited to compete. In addition to the commercial growers in this section there are several private gardeners who grow fine chrysanthemums. J. E. Anthony, gardener for Gen. Magee, is noted for the grand ones he produces. John Rudy, of J. S. Fassett's place, Strathmont, has in addition to a fine general stock a very promising lot of Japan seedlings. H.

Lexington, Ky.

The Lake View Greenhouses, S. D. Yarrington, proprietor, August Becker, manager, is putting up two new houses one 25x100, the other 20x50, making in all 17,000 square feet of glass. A new steam boiler is also being put in, Mr. Becker doing all the work himself. One house 14x18 of violets, planted in July from out of door grown stock, is in fine shape and the Princess of Wales is giving us some flowers. Roses and carnations are looking very well and so are chrysanthemums. The Lake View is growing in popularity and business is picking up nicely.

HEINRICH HANDRICH.

GLASTONBURY, CONN.—J. R. Morgan & Son are completing a range of greenhouses which will give them 4500 feet of glass.

HARTFORD, CONN.—The fall exhibition of the Connecticut Horticultural Society was held in Good Will hall on September 20 and 21. The display while good in quality was not equal in extent to some of those of former years.

COLUMBUS, O., Sept. 27.—The establishment of J. B. Romans, consisting of plants, greenhouse stock, as well as household goods, was sold at auction this week at very low prices to satisfy the demands of creditors, thus closing out a business which at one time was a leading one in the cut flower trade here. D.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant adve. not admitted under this head.

Every paid subscriber to the AMERICAN FLORIST for the year 1898 is entitled to a five-line WANT ADV. (situations only) free to be used at any time during the year.

SITUATION WANTED—By experienced rose and carnation grower, single. Good references. J B M, care American Florist.

SITUATION WANTED—By an experienced single man in the florist or gardening business; west preferred. References. FLORIST, Butte, Mont.

SITUATION WANTED—By experienced florist and designer; foreman; specialties, roses, carnations, 'muma, violets; best refs. G, P.O. Box 547, Alliance O.

SITUATION WANTED—By experienced florist and gardener, in private or commercial place. First-class references; married, small family. Address F P, 55 Oakland St., Cleveland, O.

SITUATION WANTED—By experienced florist, German, single, 35, with best references; commercial or private, the latter preferred. Address F. SCHULTZ, care Vaughan's Seed Store, Chicago.

SITUATION WANTED—By practical, all-round florist as foreman; experience in propagating and growing roses, carnations, violets and pot plants; sober and reliable Best refs. K W, care Am. Florist.

SITUATION WANTED—As head gardener and florist on gentleman's private place or institution, by middle-aged, married man; no incumbrance. Very best recommendations. B H R, care Am. Florist.

SITUATION WANTED—By florist and experienced plantsman of executive ability in all the requisites of commercial and horticultural concern inside and outside; general propagation; specialty of the nursery, etc. References. PRACTICAL, care Am. Florist.

SITUATION WANTED—Floral artist of eight years' experience in cut flower business, and best of reference; competent to do anything in cut flower business. Address L. R. BOHANNON, 920 Lanine St., Sedalia, Mo.

SITUATION WANTED—By first-class grower of roses, 'mums, carnations, etc.; German, 35 years old, married, no children. Position as working foreman on good commercial place. Sober, industrious, not afraid of work; 20 years' experience in Europe and America. West preferred. P G, care Am. Florist.

SITUATION WANTED—Experienced grafter on Manetti stock, and rose and carnation grower and propagator. Very successful in orchids, palms, ferns, cycadeni and aroideal. Should like position in commercial place or to take charge of extensive private grounds. Fine references. A B 101, care American Florist.

SITUATION WANTED—By single man to take care of gentleman's place or public institution. Am a thorough gardener and florist. Can serve in the capacity of coachman. Also superintend farm work and the making of first-class butter. Have served apprenticeship in two different European countries and 20 years in U. S. Will go to any part of the country. Correspondence solicited with parties wanting good, reliable man. Address A P A, care American Florist, Chicago.

WANTED—First-class grower to take charge of section of rose houses. WIETOR BROS., 51 Wabash Ave., Chicago.

WANTED—Young man for store, one who has experience first-class store, with best of reference. SMITH & FETTERS, 148 Euclid Ave., Cleveland, O.

WANTED—At once, experienced man for general greenhouse work. Permanent place. Address ALMA S. PATTERSON, Fort Scott, Kans.

WANTED—Experienced man for palms, ferns and general greenhouse work. Steady engagement. JOHN BLANCK, 160 43rd St., Chicago.

WANTED—To exchange wire floral designs for 2½-inch pot ferns, or larger sizes of the sword ferns. F. WALKER & CO., Louisville, Ky.

WANTED—Young (single) man well up in general greenhouse work. Wages $9 per week and room; none but a sober, bustling man need apply. W. W. COLES, Kokomo, Ind.

WANTED—Young man as assistant in retail florist store; must have a general knowledge of the florist business. Address with references. H. F. HALLE, 548 W. Madison St., Chicago.

WANTED—An experienced florist, gardener and fruit culturist; wages $20 per month and board. If not competent, sober and industrious, don't apply. State refs. CHAS. WHITTENBAUGH, Shamokin, Pa.

WANTED—Experienced night man, steam boiler; one used to greenhouse work and strictly temperate. Steady employment to good man; no other wanted. Give references and state wages. J. M. SMELY, Aurora, Ill.

WANTED—At once or Oct 15, good reliable man to grow roses, carnations and general stock. German or Swede preferred; good wages; must be sober. Address C. F. SPAN, Kensington Greenhouses, Salt Lake City, Utah.

WANTED AT ONCE—A good all-round man; must understand growing palms, ferns and pot plants. Only sober, reliable man need apply; state wages. Address L. G. PFUNDER, 427 Washington St., Portland, Ore.

WANTED—A man that thoroughly understands growing tea roses, and is capable of taking charge of 100,000 feet of glass; a number one man with the best of references is wanted. Apply to BASSETT & WASHBURN Hinsdale, Ill.

WANTED—Experienced rose grower, as foreman in commercial place; must be single and have references in regard to ability and character. State experience and wages expected. Good place for the right man. R T, care American Florist.

WANTED—At once, a single man as working foreman. Must understand growing carnations, violets, 'mums and general stock. Wages, $25 per month and board. Must be sober and honest. CHAS. K. SWENSON, 210 Asylum St., Hartford, Conn.

FOR SALE—Four greenhouses, nearly new. Good retail stand. A. CLAUS, Springfield, Ill.

FOR SALE CHEAP—Three greenhouses, four lots and stock in the best and liveliest city in America, unincumbered. Apply 558 South 1st St., Cripple Creek, Colo.

FOR SALE OR RENT—Good retail stand, 5000 feet of glass (new), has never paid less than $1300 per year net. Must buy stock. Reason for quitting, failing health. Address ILL, care Am. Florist.

FOR SALE—Established florist's store on West Madison street, near Kedzie avenue; reason, cannot give personal attention. Rent, only $22.50 per month, including living rooms. C J, care Am. Florist.

FOR RENT OR SALE—Greenhouse property, Potsdam, N. Y., 4000 ft. glass, land, barn; residence if required; established retail business. Good chance for competent man. F. W. BEST, M. D., Port Jervis, N. Y.

FOR SALE—One good second-hand 25-horsepower upright boiler, 5½ ft. high and 4 ft. wide; all tubes new 3 years ago. Also one 4-horsepower upright boiler. HARRY J. MCFARLAND, Box 14, Marshallton, Chester Co., Pa.

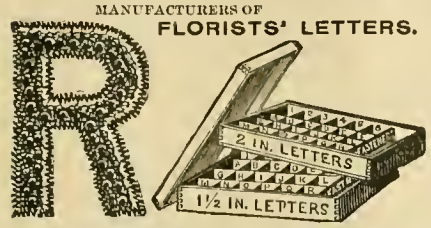
TO LEASE OR FOR SALE.

In a live junction, 35 miles from Boston. One of the best locations in Massachusetts. Four violet houses 11x85 feet, well stocked; one carnation, rose and palm house 100 feet long, heated by steam and hot water; 100 hotbed sash; about two acres of land. Dwelling house if desired. Address BOSTON, care American Florist.

FOR SALE.

Greenhouse business in Illinois, city of 15,000 population, 120 miles from Chicago; practically no competition. Reason for selling, poor health. Address.

W H G. care American Florist.



FOR SALE.

Commercial greenhouse establishment, well known and long established, doing an increasing and prosperous wholesale business, chiefly consisting of six greenhouses (about 15,000 square feet of glass), all stocked and in good condition, and situated 50 miles (90 minutes) from Boston in a town of about 6000 population. Five minutes to business center. Accompanying the foregoing is about 50 acres of finest grass and tillage land, large barn, carriage house, repair shop, hen house and 14 room, hot water heated dwelling house. All beautifully situated. Conditions favorable for market gardening, stock or general farming. A fine estate. A rare chance for someone. Owner wishes to retire from business. Price reduced to $18,000; easy terms. Address Y Z, care American Florist, Chicago.

Do not hide your light under a bushel. Tell the people what you have for sale.

THE SEED TRADE.

AMERICAN SEED TRADE ASSOCIATION.

EVERETT B. CLARK, Pres.; JOS. A. BOLGIANO, 1st Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

C. B. COE, representing D. M. Ferry & Co., was in Chicago last week.

LARGE shipments of potatoes are being made to Cuba from the eastern part of Long Island.

T. ROCHEFORT, of London, England, is reported to use $60,000 worth of lily of valley pips in a season.

H. T. HOPKINS, representing the J. H. Allan Seed Co., will be taking in their western crops the coming week.

SAN FRANCISCO.—The Cox Seed and Plant Company will change its name to the Cox Seed Company. Mr. Thos. Cox is making an eastern trip.

RECENT advices from Washington, D. C., report that A. C. Nellis was the lowest bidder for the government seed contract and the Braslan Seed Growers' Co. the next higher.

THE death is announced of Mr. Graham, of Graham, Emlyn & Passmore, who was in the seed trade in Philadelphia a good many years ago, but later drifted into lawn mower making. Mr. Graham was the maker of the famous Philadelphia lawn mower.

THE new store of S. Y. Haines & Co., in Minneapolis, 105 Boston, is very centrally located on the main floor, is seventy-five feet deep and is now being fitted up with the best fixtures and facilities for rapid handling of the mail trade; they will handle flower seeds exclusively.

BINGHAMPTON, N. Y.—Plans have been completed for the erection of large seed warehouses and offices for the E. W. Conklin & Son establishment. The main building will be 74x342 and a smaller one 36x50, besides offices and power houses. They will be ready for occupancy about January 1.

MRS. DAVID BURPEE, whose serious illness was noted in our last issue, died on September 25, at the home of her son, W. Atlee Burpee, at Fordhook Farm, Pa. Mrs. Burpee was greatly beloved by the rank and file of her son's employes, and their loss is regarded as second only to that of Mr. Burpee, who has our fullest sympathy in his bereavement.

COLUMBUS, O.—The demise of W. D. Livingston has resulted in the reorganization of the house of A. W. Livingston's Sons and the incorporation of the Livingston Seed Company with a capital stock of $40,000 principally held by the incorporators, Robert G. Livingston, Fayette G. Johnson, Grace S. Livingston, Ebenezer Livingston and Robert L. Rankin. The corporation will offer a portion of its stock to those of its employes who have been long in its service, a policy which recent progressive business methods has proven to be wise and helpful to all concerned. D.

Lima Bean Association in California.

On Monday, September 12, the California Lima Bean Association will pay to the lima bean growers of this county and a few from Santa Barbara county $25,290 95. Last Saturday the board of directors met and declared a final dividend of 29 cents per cental. This was the rate on 87,210 17 centals. The affairs of the association will then be closed up.

This association was organized in January, 1897, and handled the largest share of the crop of 1896. The business done by this association has been very large. The crop of that season was enormous, and the association controlled over seven hundred carloads. The total sales of the association, 203,118 bags of lima beans, passed through their hands, of which 167,819 bags were pooled, and 95 269 bags were purchased.

There are 110 members in the association. The largest part of the beans were sold last season. In August, 1897, there was sold and shipped 90,404 centals. The last lot, consisting of 10,351 bags, was recently sold to Porter Bros. & Co., at $2 80 per cental. The bulk of the beans sold at $1.40. Last fall a dividend of $1.15 was declared. Add to this the recent dividend of 29 cents, and the members have received $1.44 net per cental for their beans. The running expenses amounted to about $1200.

It is estimated that the European trade last year absorbed 50,000 bags. A feature of the work of the association last year, was the loaning of money to the members who could not pool their beans without receiving a small loan.—*Los Angeles Times.*

Seed Crops in Germany and Holland.

The condition of European seed crops in several important centers about September 1, is shown as follows:

BRANDENBURG.

Pole and bush beans good; wax beans a total failure, except the white-seeded Flageolet wax, which remained healthy and therefore deserves considerable commendation. Wrinkled peas are a short crop: round peas good. Cucumbers very poor. Cauliflower will yield well if the warm weather continues. Cabbage a medium crop, the seeds plump. Kohlrabi middling. Rutabagas, carrots, radish, celeriac and mangels good. Both beets and parsley were planted only moderately, but they promise a good crop. Lettuce good, but needs more warm weather. Onions promised well, but were blighted and will only yield half a crop.

Flower seeds are generally good to very good. The dwarf asters have suffered, others good. Stocks good on stages, those in the open ground middling. Wallflower, helichrysum, lathyrus and lobelia good. Carnation, Chinese pink, and petunias very good. Mignonette excellent. Phlox Drummondii, dwarf sorts, good, also salpiglossis, scabiosa and marigold. Larkspur and Myosotis alpestris var. poor. Myosotis palustris var. good. Verbenas and pansies excellent.

QUEDLINBURG.

Parsnip very good. Carrots and radish good to very good. Borage, chicory, dill, winter endive, chervil, rutabagas, cress, parsley, sugar beet, mangel, lettuce, sage and sorrel good. Pole, bush and Windsor beans, cabbage, kale, kohlrabi, turnip, spinach and early peas fair. Leek, celeriac, thyme, late peas (wrinkled and sugar) good to middling. Wax bush beans middling to poor. Cucumbers were a failure in the open field; planted between onion rows middling to good. Onions blighted badly shortly before and during the blooming period. The yield will be middling of a few sorts only and poor with most kinds, some fields being an entire failure. Spinach was planted in much smaller acreage and since stocks were pretty well cleaned out and the crop considerably below the average, the demand is at present greater than the supply. The seed was harvested during the dry weather and is therefore very bright.

Sweet peas promised well and some fields are still in good condition. They blighted largely, however, on account of the sudden hot weather and the plants die down too quickly in many fields, giving only half the usual amount of pods. In less porous soils the vines stand better. Cinerarias, calceolarias, primulas and pansies good to very good. Begonias, gloxinias, stocks, carnations, asters, nasturtiums, antirrhinum, balsams, zinnias, lobelia, dianthus (annual), mignonette, as well as other annuals and biennials good to rather good. Late-flowering larkspurs, myosotis and verbenas middling. Phlox hardly middling.

ERFURT.

Cauliflower Dwarf Erfurt promises a good crop. Cabbage and early kohlrabi middling; late kohlrabi good. Carrots for stock promise well. Table carrots, especially the finer kinds, will only yield a middling crop. Onions were grown less extensively than in the preceding year and indicate a moderate crop. Early radish suffered much from the drought and is now pillaged by the birds. Summer and winter radish will yield a middling crop. Head lettuce stand very good; the early sorts can soon be harvested, but the late ones need more warm weather. Cucumbers are backward and need warm weather to give a middling crop. The same holds with regard to pole and bush beans. Mangels promise a very good yield, but the acreage is smaller than in late years. Spinach turned out better than was expected; peas good, especially the early sorts, beets excellent.

Among flower seeds stocks, pot grown, are excellent, wallflowers, carnations and petunias good. Larkspur good to very good. Most sorts of pansies will yield more than a good middling crop. Marigolds and nasturtiums were somewhat late, but will yield a middling crop if the September weather is favorable. Zinnias will do well if the fall weather favors them and most other annuals promise a good crop, including mignonette, which was not troubled with insects this year.

HOLLAND.

The cauliflower crop may turn out a good one if the weather is dry and warm. Cabbage middling; red cabbage a small crop; Savoy cabbage satisfactory. Kale good but little planted. Turnips will give a satisfactory crop, with the exception of some of the finer sorts. Rutabagas are a small to middling crop and little planted. Kohlrabi poor. Mangels and sugar beets good but little planted. Beets and carrots middling. Onions partly blighted. Corn salad extensively sown and a good crop. Spinach was sown largely but set little seed during the cold weather, and only a small crop is expected, especially of the later kinds. Peas satisfactory. Radishes, early, stand well, but are late; summer and winter hardly middling. Celery very poor. Scorzonera below middling. Parsley very good. Chervil satisfactory, but little of it sown. Windsor beans good. Pole and bush beans and cucumbers are very late and will only yield a middling crop if the weather is favorable.—*Moller's Deutche Gartner-Zeitung.*

ATCHISON, KAN.—Oscar Groves, a Roosevelt Rough Rider, is visiting his father, R. J. Groves, the florist here. Prior to his enlistment Mr. Groves was in the business in New Mexico and he intends to resume his position soon.

For a Pinch of Money

You can buy some kinds of Tobacco Stems. Mine are guaranteed absolutely fresh and full strength, and the low price at present is only from lack of room. See my last week's adv. for prices.

Boxing Time....

The beginning of each new season calls for some new boxes. This is the place for them. Brass corners, light and strong. You all know them, or ought to, by this time. Have you seen my new box for expressing? It's just right, I think, and very little money.

THE NURSERY TRADE.

AM. ASSOCIATION OF NURSERYMEN.
A. L. BROOKE, Pres.; E. ALBERTSON Vice-Pres.; GEORGE C. SEAGER, Rochester, N. Y., Sec'y.

IT is reported that an eastern speculator, representing a big department store, has bought up all the Dutch roses in sight.

THE *Chicago Tribune* has discovered that "the rose has every color, even black, green and blue ones having been recently produced." This is an editorial statement made in discussing that perennial subject, a national flower.

Inferior Grass on Lawns.

ED. AM. FLORIST:—Please find enclosed a sample of inferior grass which is growing on our lawn and crowding out the more desirable kinds. Any information regarding its name and the prevention of its spreading will be gratefully received.
W. J.

The "inferior lawn grass" sent by "W. J." for identification is smooth crab grass, an annual weed which is not uncommon in lawns. This and the common crab grass (Panicum sanguinale), both called summer grasses by many, are pests on lawns and often disfigure the turf to a serious extent. The only remedy suggested is to carefully remove these grasses by pulling them up or hoeing them out of the ground and re-seeding the naked places with blue grass, or other seed desired. At the same time it will be well to fertilize with a liberal application of bone meal or hard wood ashes. By heavily seeding the ground with blue grass or creeping bent, whatever seed may be used, and removing these summer grasses upon their first appearance, and maintaining the land in a good state of fertility, will enable one to secure a clean sod free from weeds. F. LAMSON-SCRIBNER.

OUR PASTIMES.

With St. Louis Bowlers.

The September series of games resulted in John Kunz winning the medal for best average and J. J. Beneke that for highest score with the excellent record of 224. The standing of the players is:

Name.	Games Played.	Total.	Ave.	H. S.
Jno. Kunz	12	1888	157	191
C. Sanders	10	1556	155	170
J. J. Beneke	13	1953	150	224
C. A. Kuehn	13	1906	146	171
R. F. Tesson	6	852	143½	191
J. Young	8	1075	134	152
F. J. Fillmore	13	1238	118	153

Chicagoans will Organize.

Following the regular Florists' Club meeting, October 7, the bowling enthusiasts will perfect an organization by electing officers, formulating by-laws, etc. On September 23 J. S. Wilson was so enthused over the game that he continued to play after the rest of the band had become out of breath. Following is the score:

Name.	1st.	2d.	3d.	4th.	5th.	Av.
G. L. Grant	169	131	151	172		177
Robt. Schenk	132	146	150			142
E. F. Winterson	139	115	148	160		140
Jno. Degnan	151	151	123	127		138
J. S. Wilson	160	139	117	118	148	136
C. S. Stewart	136	140	101			125
J. Austin Shaw	82	121	144			115
A. Lange	113	90	121			108
A. Henderson	99	99	126			108

Sports at Buffalo.

There is some talk of organizing a bowling club among the florists of Buffalo and if this is accomplished it will be all off with the other teams at Detroit. St. Louis may as well forward us the trophy now as to wait until she suffers a defeat, for with such bowlers as Scott, Kasting, Eckert, Cowell and others equally proficient but too numerous to mention, it will be useless for others to compete. In fact, for all-around sports I think Buffalo "takes the cake." We can play base ball, run a foot race, shoot, ride a bicycle or play lawn tennis with an abandon equal to our fervor upon the alleys and we've orators who can talk any other men in the business to a standstill. W.

Philadelphia Bowling Notes.

The Saturday night match was a warm affair and this time it was Captain Kilt and his merry men who bit the dust. Captain Charlie's smile was very expansive. The rubber will be next Saturday evening.

Moore is with us once more looking brown as a Seckel pear and with a vim in his arm that threatens to make matchwood of the toughest lignum-vitæ. He has the best rolling style of any of our bowlers.

Speaking of style; how different most men are; and how odd sometimes. Baker is perhaps the oddest although George McLean and Lou Melle are close seconds. Deacon Harris was unique, but he confines himself to shuffleboard of late years. That 240 he once made is too good to be spoiled. W. K. thinks he can now afford to rest on his laurels and withal pose a little just to aggravate some of the cocky ones of the rising generation. W.

Flatbush, N. Y.

John I. Raynor and C. Werner are the latest additions to the Bowling Club's membership. J. V. Phillips was a visitor at the last practice game and will soon add his name to the roll also. Louis Schmutz is on excellent terms with himself since he got a new ball with his initials in ivory on it. He wants everybody to try it and tell him how good it is. On Thursday evening, September 29 the Flatbush Club played a match game with the team representing Brooklyn Council, Royal Arcanum. Tom Brennan is high man up to date in the contest for the handsome cigar holder presented by Le Moult. Mr. Brennan's score is 209 and he considers himself fairly safe. The Flatbush Club voted at its last meeting to send $10 to J. F. Wilcox and enter for the big tournament that is to come off at Detroit next August.

NEW BEDFORD, MASS.—One greenhouse, part of another, together with a barn and boiler house, belonging to C. H. Waite, were destroyed by fire on the morning of September 16; loss about $4,000. The fire is believed to have been of incendiary origin.

The Finest Flowering Novelty of the Century.....

THE EVERBLOOMING

Acalypha Sanderi..

The most extraordinary decorative flowering plant ever introduced. Spikes of blossom

Helpful Reminders.

For outside bloom in the spring and indoor winter bloom it is desirable that bulbs be in the ground as early as possible. The location of a bulb bed has much to do with its success and this is a matter which should be carefully considered when making beds for customers. Avoid the dry corners; many bulbs planted close to buildings are a failure on this account. A thick coating of leaves is the best covering.

The Romans which were put in flats and the Harrisii in pots for early bloom should be rooted by this time. The Romans are doubtless very well rooted and if you have a house which you keep at an even temperature by means of a fire on cool days and nights, it is well to move them in under the bench, but if your house is allowed to change temperature with the weather they are better outside.

In preparing other bulbs for winter be careful to procure the proper varieties. Provide a number of pot plants suitable for retailing, as in most localities potted hyacinths are found more profitable than the cut blooms. Those which are for cutting will do best in flat boxes holding about three inches of soil placed on the ground in rows about four feet broad. They should be well watered to start with and not allowed to become quite dry at any time. After they are well rooted small lots may be taken into gentle heat under benches as your demand for the flowers may require, but do not attempt to bloom any before Christmas unless you have the early flowering varieties. The light shades of blue, pink and pure white are found the most desirable either of tulips or hyacinths. Just before a hard freeze put on a cover of about two feet of straw and another foot of soil with an extra amount in the center to shed water. In this situation they will be available any time up to May 1. Spanish iris should not be brought in before March 1, and then into a cool house for the first two weeks. C. B. W.

Buffalo.

STOCK IS FAIR AND TRADE WILL BE WHEN FROST ARRIVES.—KASTING REARRANGES HIS STORE.—PALMER & SON'S IMPROVEMENT.

Roses are coming in very good, but a frost will increase the demand for everything. Kasting is getting in some very clean and perfect Beauties. Maid and Bride show improvement. Kaiserin is still good, while Meteor is all that one could wish. Carnations are fair and offer good prospects for everyone. Asters are on the wane.

The Florists' Club had another meeting last Wednesday and everything connected with the flower show indicates success.

Increased business has compelled Kasting to take the space used as an office for a salesroom. He is enlarging his office also and when completed it will be an improvement both for store and office.

Palmer & Son have about completed the alterations in their store, and from two small windows they have now one large one so arranged that ferns and other plants can be used in front and have the pots entirely hidden. The fixtures are all in white and gold and on each side as you enter there is an immense mirror. The colors used on the wall and ceiling harmonize beautifully with the other things. An office upstairs is reached by a spiral stairway. The store runs from one street to another, which makes it very convenient for receiving and sending out stock. W.

Silver Side, Del.

Looking through the greenhouses of Mr. Trump (Penn Rock Co.), on the occasion of a recent visit, the roses were found to be in fine shape, the grafted ones being worthy of especial notice. Some of the popular commercial varieties are grown. Grafted plants of American Beauty are being used for summer cutting. Mushrooms form one of the staple crops of this firm and it has always proven satisfactory. Carnations are all in their winter quarters and looking well. Flora Hill is especially good, with its excellent and almost perfectly fringed, fragrant flowers, which can be cut at any time. These have been lifted for over a month and the early moving apparently suits them. Some Mayor Pingree look promising. I never see a new yellow carnation in these days without feelings of surprise that old Buttercup still leads them all when color is under consideration. Pingree and Eldorado are excellent when we are talking about quantity and good sized flowers, but the intense yellow color of Buttercup is lacking in the newer varieties. Violets were being planted in their blooming quarters and bid fair to give a full crop of flowers when the proper time comes.

A wholesale business is done here exclusively, as the store at Wilmington has been leased. Mr. H. T. Dumont handles the product with credit to himself and satisfaction to the consignors. The location is easy walking from Silver Side Station, and there is lots of room on Mr. Trump's estate in which to develop this establishment, and it is sincerely to be hoped that the results in the immediate future will warrant continuous progress in that direction. L.

FULTON, N. Y.—Charles Malone is seriously ill.

FALL RIVER, MASS.—M. Conroy & Co. have made an assignment for the benefit of their creditors, according to rumor.

KNIGHTS TEMPLAR MAKE BUSINESS BOOM. —NEWLY DECORATED RETAIL STORES.— A DEPARTMENTAL VENTURE.—NOTES.

Elliott & Mann are busy arranging for a large number of decorations ordered for Knights Templar conclave week. Among those which they secured are the headquarters of the Grand Commanderies of Pennsylvania, Kentucky, Virginia and Illinois, together with over a dozen lesser decorations. This firm, with A. W. Smith, has the decorating of the large hall where the banquet will be held. There will be seats for 1100 and each will have one-half of the hall and tables to decorate.

A. W. Smith has re-decorated his store-room on Sixth avenue and improved the appearance very greatly. The walls are finished in dark green, with a deep frieze of stenciled design in a lighter shade of green.

Kaufman Bros., operating the largest department store in the city, will add a florist department in charge of Mrs. Marie Belt, of Baltimore, Md., who will have as assistant Miss Anna Klopfler, who until recently had a florist's store on Smithfield street.

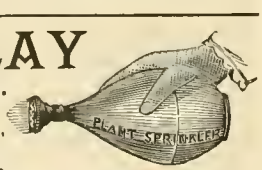
Breitenstein & Flemm have remodeled and re-decorated their place. The room is bright in the day time and lights up beautifully under the electric lights. Tables are used to make the display of flowers, and with palms and decorative plants in fine arrangement the effect is highly artistic.

The Pittsburg Florists' Exchange is the name used by S. S. Skidelsky and Frank F. Fischer for their wholesale cut flower commission house at 444 Sixth avenue. They propose to handle a full line of florists' supplies in addition to cut flowers.

Julius W. Ludwig, Allegheny Market, has completed a very handsome piece of work in immortelles of a Sir Knight, head and bust, in bas-relief with crossed swords and wreath encircling the whole. It is about two and one-half feet in diameter and very smooth.

Joseph E. Rolker, of New York, was a visitor this week. REGIA.

Paterson, N. J.



The last meeting of the Paterson Florists' Club was an interesting one. The market question, which has been a disturbing element, was finally reported upon and then gently laid at rest, the city counsel having given it as his opinion that florists who sold their own productions could not be disturbed.

Ed. Sceery offered to read an essay upon "crape chasers" at the next meeting and if the essay is as sparkling as some of the statements which he made concerning the Paterson brand it will be worth everybody's while to hear him talk.

HORAN'S PATENT

Carnation Support

Patented Aug. 3, 1897.

Following are a few of the many testimonials received from various growers:

Buffalo, N Y, Jan. 25, '98
Mr Jas. Horan & Son,

GENTLEMEN: — I have in use a few hundred of your patent Carnation Supports. They are supporting Flora Hill. While I consider the first cost rather high, they answer the purpose admirably, not crowding the plants, but affording light and air between them. They should be of various heights and sizes, to suit the different varieties of carnations.

Very respectfully, WILLIAM SCOTT.

Connellsville Pa, Jan. 31, '98.
Mr. Jas. Horan & Son,

GENTLEMEN:—I have given your supports a fair trial and consider them far ahead of anything I have ever seen for the purpose, and although they are a little expensive at the start, the fact that the same support can be used year after year, makes them very cheap, and I would gladly recommend them to anyone wishing a perfect support for carnations. Yours truly, L. D. WOODS.

We have made an improvement on our Supports which admits of the rings being let out two inches, which prevents the plant from being crowded as it increases in size. While we think the size we have adopted suitable for nearly all the varieties now in cultivation, we can furnish larger sizes at a slight increase of cost over the regular sizes to those who desire them.

JAS. HORAN & SON, Bridgeport, Conn.

LOUISVILLE SPIRIT CURED TOBACCO CO LOUISVILLE, KY

Worcester, Mass.

We have had ideal weather in which to house our carnations in this vicinity and they are now progressing finely, although a trifle smaller than last year. Of the newer varieties, Flora Hill made the largest plants in the field and is really the most promising white variety grown here. Evelina also made large plants and gives promise of an excellent and early crop. Alba Superba, while not as large as Hill is looking strong and healthy and has that bloom on the foliage that we like to see. Bon Ton made a splendid growth; perhaps the first crop may be a little short in the stem but that defect will soon disappear. New York developed stem rot rather badly and about twenty per cent of the plants died in the field. The remainder are doing well, Mrs. James Dean is clean and thrifty but rather undersized, as is Mrs. Bradt. John Young was also subject to stem rot. Victor made good strong plants and I anticipate splendid results from this sport. C. A. Dana made a much better showing than last year and the second year may tell a different story in regard to this variety. The older kinds, Daybreak, Scott, Edith Foster, Freedom, Alaska, Albertini, Rose Queen, Meteor, Hector and Nivea have nearly all made plants equal to the average for a number of years. Eldorado I grew inside this summer and it compares very favorably with what I have seen of the field grown plants in this locality.

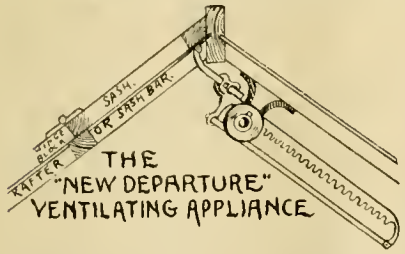
There will be no scarcity of flowers this winter. The best roses now coming in are Meteor, Perle, Kaiserin and American Beauty, which are very good indeed for this early in the season.

One of the most interesting places to visit around this city is the greenhouses of the Central Hospital for the Insane. Of course these greenhouses are not for commercial purposes, but the efficient gardener, Henry Gray, has a most beautiful collection of palms, crotons and foliage plants of all kinds. In one house the old Marechal Niel and Lamarque clamber entirely over the sides and in a house built especially for it is a magnificent Victoria regia, which rewards care with frequent blossoms. During the past summer the greenhouses were refitted and entirely renovated. The beautiful lawn in front of the buildings is dotted here and there with flower beds which are a mass of bloom.



Florists in this locality do not seem to fully enter into the ribbon bedding idea. Either our summers are too dry for great success or there is not that demand and appreciation shown in cities farther north. Some of the best successes in this line during the past summer were the "C. E." beds made in honor of the Christian Endeavor convention, which met here in July. Some of these beds were very beautiful. M. C. DORRIS.

Cypress Greenhouse Material.

We are the pioneers in Clear Cypress Greenhouse Material. We discovered that Cypress is better than any other wood for greenhouses from top of posts up and we introduced it, and fought for it against many prejudices, and finally succeeded in bringing it into general use.

Others have attempted to follow where we lead, others are trying to reap what we sowed, but we have the experience and are recognized as experts in greenhouse construction.

Notes of a Tour in Europe.

[Read by Henry F. Michell, October 4, before the Philadelphia Florists' Club.]

I was surprised, and rather taken unawares, when the chairman of your committee, G. C. Watson, asked me upon my return from Europe, to prepare an essay on the interesting things I saw during my travels across the water. He induced me, however, to accept this duty.

Leaving New York on the steamer Friederich der Grosse on June 23, we arrived at Southampton, after a very pleasant journey, on July 1. I especially noticed, on looking out of the railroad car windows on my way to London, that many of the track embankments were cultivated with vegetables and flowers. Some of them appeared to be commercial, but most of them belonged to the residences near by. This seemed quite new to me and most interesting, as they were kept clean and trim.

Reaching London, and getting myself located, I started out to look for points of interest, especially in the horticultural line. First I took a trip to Hyde Park, and among the interesting points there I noticed immense crowds of fashionable people, both walking and driving. The flower bedding is done here on a mammoth scale. As far as the eye can reach are seen most artistic beds. Violas do most excellently in England; also begonias, the semperflorens and tuberous rooted varieties, as well as fuchsias, heliotropes, etc., which are used in great quantities. They do much better there than in this country. The lawns are kept closely cut, which was a great delight to me; the turf was soft and velvety, and rich, dark green in color.

My next visit was to Hampton Court, in the suburbs of London. This was the country seat of the famous Cardinal Wolsey, the "favorite" of King Henry VIII, and these magnificent gardens, extending along the banks of the Thames, are among the most pleasing that I have ever seen. Old fashioned flowers abound here. Roses of all colors climb along the walls and hang in heavy clusters to charm the visitor. Heliotropes, pansies, and violas vie with geraniums, begonias and fuchsias to make a picture never to be forgotten. Along the many well kept walks are great numbers of beautifully shaped sweet bay trees, as well as orange and lemon trees, all in immense square tubs, which have movable sides so that the plants can easily be taken out of them. In a grapery, especially built for it, is the famous Hampton Court grape vine, a Black Hamburgh, planted by King George III in the year 1768. After three enlargements of the house it now covers a space of 2200 square feet. When I saw the vine it was literally covered with immense bunches of fruit, not quite ripe, but still very tempting. All the fruit is sent to Her Majesty, Queen Victoria, for her own personal use and for distribution to her friends. There are many other interesting features of the gardens. A maze in which one can easily wander for a long time without finding his way out, is one of the attractions. The lawns here are also kept in a state of great perfection by having plenty of workmen constantly employed with mowers, shears and rakes. One special feature was noticeable, that is, the absence of the signs, "Keep off the grass," but instead, there are signs, "Please do not walk on the edges of the grass."

My next place to visit was Kew Gardens, the school of the best English, Scotch and Irish gardeners. Next I went to the Mammoth Crystal Palace with its large number of flower beds, etc. The next place on my programme was a visit to Carter & Company's extensive seed trial grounds at Mortlake, where I posted myself on the best things of especial merit. My next trip took me to Sutton & Son's seed growing establishment at Reading, about an hour's ride outside of London. There, also, I had a most interesting visit as everything is in the highest possible state of cultivation and good order. Among the most notable specialties were tuberous rooted begonia blooms eight inches in diameter, mammoth gloxinias, Nemesia Suttoni, giant flowering primulas, streptocarpus, forcing tomatoes, and others too numerous to mention.

I then went to Belgium, arriving at Ostende, the famous watering place, whence I went to Brussels and Ghent, the headquarters for tuberous rooted begonias and gloxinias. Great improvements are being made in begonias by encouraging and growing extensively species which produce their flowers on stiff stems, thrown well above the foliage, as well as large size of bloom and brilliant colors. From Belgium I went to Holland, stopping at Haarlem, which is the starting point of the great bulb growing district. This is certainly a most interesting country; the weather was rather cold and wet while I was there the first few days, but turned out fine after the third day. I was well entertained there, especially by Mr. L. Van Wavern, who is one of the oldest, largest, and most reliable growers of bulbs. Of course, I visited a number of other bulb growers, as the bulb farms nearly all adjoin, and I certainly gained much knowledge in Holland, as the members of the leading firms were very communicative and showed me everything about the bulbs.

After leaving Holland I made my way to Cologne and from there I went by way of the beautiful Rhine with its magnificent vineyards, to Mainz and thence to Frankfort. The most interesting place I visited in Frankfort was the Palmen Garten, or Palm Garden. This, I think, is one of the finest landscape effects that I have ever seen. The bedding of plants was done on a perfect scale; in fact, it was wonderful the way the many carpet bedding designs were kept trimmed by a large force of gardeners. Carnations, heliotropes, and other flowers are brought to great perfection here, especially the roses. A wonderful sight was a Crimson Rambler rose twined about an old dead tree which served as a trellis for it. It stood fully fifteen feet high and was covered with magnificent clusters of bloom. The head gardener informed me that this plant had over 2000 open flowers on it at that time. Another notable and new sight for me was to see Clematis Jackmanii trained in the shape of large umbrellas. The entire tops were a mass of rich purple blooms.

Leaving Frankfort I went to Erfurt in Germany, which is the great seed growing district. It took me three days to go over Mr. E. Benary's extensive grounds to carefully inspect and note specialties most interesting to the seedsman. The greatest care is taken here with every variety of seed grown and the force of employes is immense. One special feature that attracted my attention was the transplanting of carnation seedlings, four men planting diagonally four rows at one time. The foreman, on my inquiry, told me that the work is much better and more quickly done by that process of planting. Every known flower and vegetable is grown here, but I must omit going into details.

After spending nearly a week at Erfurt I visited Berlin. Most interesting in the horticultural line was the Thiergarten, a beautiful natural park kept in excellent order. From Berlin I traveled into Switzerland. The most beautiful place I visited there was Luzerne, the garden spot of the republic. Plants and flowers are here in great abundance, principally on the quays, where they flourish in excellent health and everything is carefully attended and constantly watched.

The next place on my route was Paris. Notable here are the gardens of Luxembourg, which adjoin the palace of that name. These are quaintly laid out in the old style. A large part of the gardens is terraced, and along the terraces are set, at intervals, statues of the French queens cut in white marble, giving the gardens a very rich effect. Carpet bedding is done in profusion and is pleasing to the eye, especially looking down from the terraces. The gardens of the Tuileries are magnificent and cover a large area. One of the most noticeable effects in Paris is the long boulevard of the Champs Elysees, lined on both sides with most magnificent trees, which are trained and trimmed in such a way that they have the appearance of a long arbor. They are trained in a lateral effect, branching out on the sides only and not arching or covering the drive. This is certainly worth seeing, and I shall never forget the general effect of this system. Passing through this magnificent avenue, which is terminated by the beautiful Arc de Triomphe, or Triumphal Arch, we reach the Bois de Boulogne, or Boulogne Woods, the fashionable promenade and drive of the Parisians. There are two large and beautiful lakes in this park and along the drives are seen gay parties enjoying to the fullest extent the grand landscape.

My next trip took me to Versailles, the palace of the French kings, about fifteen miles from Paris. The gardens and fountains here are the most famous in the world, but they are not kept up as well as they should be. One of the gardeners told me that the appropriations were very much reduced lately, but the whole gigantic grounds are still magnificent. Directly in front of the palace is a large lake called the Swiss Water, which was dug, made and filled with water by the Swiss Guards in forty-eight hours to please the whim of a French queen. These grounds are especially noted for their great number of handsome fountains, which I was informed cost the government 10,000 francs, $2,000, every time they are played, which, however, only occurs on the first Sunday of each month, when the Parisians turn out in great numbers. Limited time prevents me from giving a more detailed description of this paradise.

After Versailles my next visit was to the seed establishment and trial grounds of Vilmorin & Co., at Verrierres, about twenty miles from Paris. Here also, is the residence of the Vilmorin family, a stately old mansion surrounded by large woods and well kept grounds. After partaking of a most sumptuous and enjoyable breakfast with the Vilmorin family we started on an inspecting tour of their trial grounds and warehouses. Most notable in the trial grounds were tests of every variety of aster, petunia, phlox, verbena, sweet pea, and every other species as far as the eye could reach. Gladioli form quite a large percentage of the grounds, where every known variety is on test. Many of the points which were explained to me by Mr. Vilmorin were of great value, making my trip most pleasurable and profitable.

Leaving Verrierres I accompanied Mr. Vilmorin to the Horticultural Exhibition which was being held in Paris. The display was principally made up of asters, in great quantities, and other annuals. Strange to say, the gardeners and florists have the same familiar healthy appearance as they have in Philadelphia, and I almost felt that I was at one of our own exhibitions here in Horticultural Hall. The only difference was that they all spoke the French language, and that I could not understand or speak it at all.

After leaving Paris we sailed for home, and after a pleasant voyage I was delighted to find myself once more with my good friends in the City of Brotherly Love. The only unpleasant feature about my trip was the request from the chairman of your essay committee that I should prepare and read a paper before you and tell you what I saw across the water, a task of which I question my capability. Of course, I find since my return home that there was more which I did not see than that I did see and if this paper is not all that you expected to hear, and has not interested you, I fix the blame on Mr. Watson, who is entirely responsible for all deficiencies.

CHRYSANTHEMUMS.

SEEDLING CHRYSANTHEMUMS.

As the time is fast approaching when those interested will wish to exhibit their seedlings before the committees of the Chrysanthemum Society of America a few words regarding the rules and regulations governing these exhibits may not be amiss.

A fee of $2 is charged for each variety entered. This entry fee entitles the exhibitor to submit the variety before as many committees as he may desire. Six blooms are required of each variety shown and to be eligible must be such as has been tested at least two years. No member of a committee shall show his blooms before the committee of which he is a member. Varieties scoring eighty-five points are entitled to the society's first-class certificate. Foreign varieties may also be entered and certificated under the same conditions. All numbered seedlings entered must also be provided with a name. In case the variety does not score enough to secure a certificate, and the exhibitor desires to apply this name to some other variety in the future, it will appear in all reports under number if the secretary be so requested.

CHRYSANTHEMUM THORNDEN FIRST WEEK OF OCTOBER.

As each year there are new organizations holding their first exhibitions, and as many of these are anxious to adopt scales for judging various classes, it would seem wise that one scale be used universally. To this end I give those adopted by the Chrysanthemum Society of America, which seem to be adequate.

Scale A.—Scale of points for bush plants and standards; single specimen or any number up to six, in an exhibition where the class under consideration does not form the chief feature in the exhibition hall:

Equality of size and form of plant	40
Size of bloom	30
Foliage	30

Scale B.—Scale of points for bush plants; exhibits of more than six or for any number of specimen plants in an exhibition where the class under consideration forms the chief feature in the exhibition hall:

Equality of size and form of plant	25
Size of bloom	20
Foliage	25
General effect	30

Scale C.—Scale of points for plants grown to single stem and one bloom; a height of not over three feet is recommended for plants in this class, and pots not over six inches in diameter:

Compact sturdy growth	40
Foliage	30
Size of bloom	30

Scale D.—Scale of points for specimen blooms:

Color	25
Form	25
Fullness	15
Stem	10
Petalage	10
Size	15

In the Chrysanthemum Society's cup contest, which occurs in Philadelphia on October 18, the blooms should be addressed to David Rust, Horticultural Hall, instead of Edwin Lonsdale as formerly announced.

ELMER D. SMITH, Sec'y.

NOTES ON VARIETIES.

Thornden (new).—Plants from 2-inch pot stock, planted June 20, are now four and one-half feet high. A few crown buds taken September 15. Terminals just taken, October 1.

Autumn Glory (new).—Stock and date of planting same as foregoing, height, four and one-half feet, only one plant making crown (the one to extreme right in the cut). This was small when taken September 20, but has made fair progress. Most of the terminals will be ready this week. Rather doubtful if our blooms will be ready for November 8 to 12 shows, although it may develop much faster than many other kinds.

Modesto.—Stock and date of planting same, height, four and one-half feet. Terminal buds taken September 20 to 25. The earliest buds will probably be perfected by November 6, although better finished blooms may be had the following week.

Miss Minnie Wanamaker.—Stock and date of planting same, height, three and one-half feet. Crown buds taken September 10 to 15 will be ready last of present month. An old variety, but still very desirable. ELMER D. SMITH.

CHRYSANTHEMUM SOCIETY OF AMERICA.

The committees judging new seedlings will be in session October 8, 15, 22, 29, November 5, 12, 19, and 26. Exhibitors should make their entries (for which a fee of $2 is charged for each variety entered) to the secretary not later than the Tuesday of the week the blooms are to be shown. Express charges prepaid and forwarded to any of the following addresses, exhibits will receive careful consideration.

Boston, Mass., A. H. Fewkes, Horticultural Hall, Tremont street.

New York, N. Y., E. Dailledouze, care of New York Cut Flower Co, 119 West Twenty-third street.

Philadelphia, Pa., A. B Cartledge, 1514 Chestnut street.

Cincinnati, O., R. Witterstaetter, care of Cincinnati Cut Flower Company, corner Fourth and Walnut streets.

Chicago, Ill., C. W. Johnson, care of Illinois Cut Flower Co., 51 Wabash avenue.

CHRYSANTHEMUM AUTUMN GLORY FIRST WEEK OF OCTOBER.

Coming Exhibitions.

[*Secretaries are requested to supply any omissions from this list.*]

BOSTON, Nov. 8-11. Chrysanthemum show, Massachusetts Hort. Society. Robert Manning, Sec'y, Horticultural Hall, Tremont St.

BROCKTON, Mass., Nov. 16-18. Chrysanthemum show, Florists' and Gardeners' Club. Walter E. Baker, Sec'y.

BUFFALO, N. Y., Nov. 9-11.—Chrysanthemum show, Buffalo Florists' Club. Wm. Legg, Sec'y, 1440 Delaware Ave.

Violets at Poughkeepsie.

Salvias, marigolds and zinnias are at the height of their autumn splendor in old Poughkeepsie and the roadsides are all purple and white with wild asters, but for the eye of the New York wholesaler or the Poughkeepsie grower there is here one flower only, and the broad expanse of the Hudson River with its picturesque highlands on the further side, the dark shadows of the Ulster mountains beyond, the wonderful railroad bridge up in midair, and the ever present allurements of Vassar College, which are so potent an attraction for the visitor, have no charms for the local grower. His eye is fixed intently with almost microscopic scrutiny on the little mounds of green foliage that extend in symmetrical rows from end to end of his greenhouses, watching for the wee blue specks that are the precursors of the coming harvest which is to fill his pocket with dollars and afford the wherewithall to erect a couple more houses next year. "Have you begun to send down yet?" takes the place, at this season, of the customary "good morning" in Poughkeepsie, and the violet man reaches supreme happiness when he can reply in an unconcerned sort of way, "Yes, I sent down a bunch or

two Monday." The only man in the community who has been induced to take his eyes off his plants other than for sleep and meals is Thurman Flegler, who stopped long enough to get married on September 26. He married Miss Devine, who, had she been anything less than divine, never could have enticed a Poughkeepsie violet grower away from his plants in late September.

Poughkeepsie violets are the best in the world. They can be found, all through the season, with Young, Sheridan, Horan, Ford and other New York wholesalers who advertise regularly in the AMERICAN FLORIST. Last winter there were thirty-two Poughkeepsie shippers of this fragrant commodity; new ones are continually springing up, and at the present rate of development a "violet train" daily from Poughkeepsie to the metropolis suggests itself as a possibility. Among the larger growers are W. G. Saltford with 17,000 plants, B. Willig 22,000, Thos. Devoy & Son 14,000, and across the river in the Highland district J. W. Feeter 12,000 and M. J. Moore 19,000 The plants in the different establishments vary in size and character, naturally, and there is much local rivalry for the prestige of being the acknowledged "Violet King," a distinction which is apt to shift, according to circumstances, from year to year. Those who have the largest plants to-day are not yet sure of the permanency of their lead, for it is conceded that if a long spell of warm weather should now come the smaller plants will gain an advantage, but if it should be cold the man with the big plants will benefit.

One looks in vain here for a solitary specimen of Lady Campbell. Marie Louise is good enough for Poughkeepsie growers. The kind of plant most approved is the single crown plant with dark, well hardened foliage, the crown "open" and carried well above the soil. The stock is considered by good judges to look better this year than ever before. The method of propagating most generally in use here is to take the young runners in April, which, after being rooted in sand, are shifted to flats or 2-inch pots and kept either in the house or frame until planting time, which is anywhere from June to August, the earlier the better. There are a few growers, such as Fricker and Willig, who plant their young stock in the field during summer and with satisfactory results, but most of the growers believe that they are less liable to disease if kept under glass all the time. As to benches or solid beds there seems little preference, the main difference being that the beds require less water. The houses are almost invariably constructed with full side ventilation. The soil is a gravelly loam not particularly rich, and, to the casual observer at least, the most promising stock seems to be in those establishments where the soil is lightest and which are kept "on the dry side." Some growers use a mulch of old, finely broken horse manure, one benefit of which is to keep the blooms off the soil. All the houses have been thickly coated with white wash, but it is now about time to remove this shading and let the sun get at the plants.

Among the most troublesome enemies of the violet grower is the cut worm. This is the larva of the "June bug" and is introduced into the houses with the sod used to fill the benches. It is very destructive and in some places hundreds of dead plants have attested its ravages. Hand picking seems to be the only resort to eradicate it. Mr. Devoy suggests that all soil be piled up outside in fall and allowed to remain through the winter; the worms will work down out of it into the ground. The "gall fly" has been troubling some growers. This insect lays its eggs in the heart of the plant in late summer, and the minute white worms that result eat the young leaves and buds. Black fly is another dangerous pest, the remedy for which is regular fumigation or dusting with tobacco dust.

During the past season new violet houses have been built as follows: Feeter, one house 26x161; Willig, two houses, each 18x204; Devoy, one house 20x126. Mr. Willig is comparatively a new comer, this being his third season, but he is a hustler. Feeter's "slope" house, illustrated in the AMERICAN FLORIST last winter, has given satisfactory results. George Saltford, Jr., is in charge of this place. Isaac Fricker is one of the old-school Albany gardeners, a contemporary of Grey, Menand, Bennett and Dirwanger. His establishment is devoted to a general variety of plants, all of which are in excellent shape. He says that Paul Gindra has the finest violets in Poughkeepsie, and adds, "I'm as glad as if they were my own." One house in M. J. Lynch's big establishment is devoted to violets, and they are as good as the best. Mr. Lynch is Poughkeepsie's progressive retail florist, and many acres of valuable building lots attest his industry and prudence during his many years' residence here.

LUTHER BURBANK.

Two Valuable Plants for Jardinieres.

Ophiopogon Jaburan folius aureus variegatus and Acorus gramineus, the latter in the white as well as the yellow variegated form, are excellent plants for jardiniere work. Both combine with compactness a graceful habit, and if properly cultivated the markings of the leaves are decidedly pronounced. The fact that they cover themselves underneath renders them preferable to most ferns. So far as their hardiness is concerned, they rank with the aspidistra. They are, furthermore, of great value on account of the adaptability of their leaves to all kinds of floral work. Their culture is very simple, although the ophiopogon is of rather slow growth.—*Die Bindekunst.*

A Successful Hybridizer.

Among the leaders in his profession stands the name of Luther Burbank, one of the most successful hybridizers of plants which this county has yet produced. He was born March 7, 1849, at Lancaster, Mass. His father was a farmer and his mother, a member of the Burpee family, a branch of which conducts at Philadelphia one of our largest seed houses, survives at the age of eighty-five years. Young Burbank's education was considered liberal at his eighteenth year and his first employment was in the Ames plow works at Worcester, Mass, of which his uncle was superintendent for half a century. But service in a noisy factory was not compatible with his love of nature and in 1870 he purchased a small tract of land at Lunenburg, Mass. Here began Mr. Burbank's career as a horticulturist and his first work for the science was consummated in 1873, when he originated the Burbank potato. Finding the climate of New England unsuited to the requirements of the experimental work in which he found absorbing interest, he removed, in 1875, to Santa Rosa, Cal., where to-day he has extensive grounds and a large collection of lilies and many other plants, shrubs and trees.

Always an indefatigable worker, Mr. Burbank has run the whole gamut of horticultural experiment and has many times duplicated his first success with the potato. He grew more than a million seedlings to establish a new race of gladiolus, and the canna, iris, calla and the rose have also responded to the masterly touch of this adept hybridizer. Raspberries, blackberries, walnuts, quinces, prunes and many other fruits have been developed to man's greater good at his garden of the Pacific. Beside his greenhouses and ten acres of home grounds on Petaluma avenue, Santa Rosa, he has a farm a few miles distant, at Sebastopol, where eighteen acres are given over to seedlings and thirty acres devoted to farm experiments. So fully is Mr. Burbank's time occupied by his studies, tests and correspondence and so seriously has he been annoyed by the depredations of those who seek personal profit as a result of his successes that he refuses to admit the public to his gardens except in the month of June, which is reception period for intending purchasers. Then those who anticipate a view of uniform rows of beautiful plants or healthy shrubs and vegetables are sadly disappointed, for they find, instead, chaos, a veritable horticultural workshop.

A story which Mr. Burbank delights in telling is that of a member of one of the largest floral firms in the country who had traveled over 3,000 miles to see the workings of this hive where man and nature join in industry. On the way from the station the visitor overtook an old gentleman who had worked many years for Mr. Burbank and inquired of him if he knew Burbank. "Of course I do," was the reply. "He used to have a big nursery, but sold it out, and now he raises acres and acres of stuff, and every summer has 'em all dug up and burned. I wouldn't give a hundred and fifty dollars for the whole kerboodle." The gentleman from the Atlantic stored away this gratuitous advice, but before the day had passed he selected from Mr. Burbank's stock a half dozen plants for which he paid $6,000.

Whenever humanity calls, Mr. Burbank stands ready to respond and it may be said for his work that his best introductions are yet to come, at least that is his

opinion. It requires much time and close attention to properly segregate, classify, test and propagate, and after having secured the desired improvement the work increases in value and results in geometrical ratio as time progresses, one life affording only a good beginning for others to build upon.

Erianthus Ravennae.

Its specific name is identical with the town of Ravenna, situated on the Italian coast of the Adriatic Sea, from whence it probably was distributed; at any rate it is a native of southern Europe, which will tell us that a little straw or leaves as protection during the winter months is desirable, although not exactly necessary if it is planted in a sheltered position. It should be given the full benefit of the sun and thrives best in a well-manured sandy or gravelly bottom with plenty of moisture. Planted at the margin of the shrubbery, in the perennial border or edging the lily ponds, its bold form is pleasing, and especially at this time do the feathery plumes, carried on strong stalks and waving slightly in the breeze, give life to the surrounding landscape.

Compared with other ornamental grasses, it is outranked only by the pampas grass, Gynerium argenteum, but unfortunately the latter is not hardy in this latitude. Under good cultivation, Erianthus Ravennæ will attain a height of ten feet or more. It comes into bloom the first week in September, which is quite an advantage, as most of our ornamental grasses do not produce their feathery blooms before late in the season, to be enjoyed for only a short time. The illustration shows a clump of twelve plants put out a year ago.

Illinois. JAS. JENSEN.

CARNATIONS.

CULTURAL NOTES.

October 8.—A conversation as to soils and other kindred matters was held this week between four prominent growers of carnations and as such conversations generally bring out some good points I give the substance of this one here.

For field grown carnations a soil that will admit of the plants being taken up with a small clump attached to the roots was considered decidedly the best in which to plant out stock. A great mistake made by many growers is in not manuring the ground heavily enough to produce good plants in the field, especially in a season of drought such as was experienced in many sections this year.

A patch of carnations that came through the past summer in fairly good shape was planted as follows: A furrow was drawn eight inches deep; into this was put about two inches of well rotted manure and the soil was then turned back and the carnations planted directly over the fertilizer. In this manner the plants started to grow nicely before they reached the manure and when the roots did reach it they were far enough advanced to make good use of the material at hand. This was, of course, a considerable job but the returns more than paid for the extra work and go to show that there is nothing like manure to help a plant over a dry season.

In part of another patch a mixture of lime and wood ashes was used and the results showed about twenty per cent in favor of the treatment of ashes and lime over those not so treated.

Neither of the four conversationalists could understand how any one could recommend the planting of carnations in the houses from the field without protecting them from the rays of the sun for a short time, as it has been their experience that plants so handled will always receive a decided check and often one fatal to their growth. To plant carnations in a house with dry soil on the benches was also condemned, no matter if the benches were thoroughly soaked immediately after planting.

It was also conceded that soil might be made too rich for carnations coming in from the field, that it would be better to add a little extra manure after the plants had become well established, and that later in the season they could stand much more stimulant than is usually given them. Carnations housed during the summer or prior to September 1, ought to be in shape now for additional fertilizer unless they show by their growth that they really do not need it.

One of these four growers uses a stake that comes above ground about six inches; to this he ties his plants and thus keeps them from sagging. As soon as they begin to throw up flowering shoots he takes three stakes for a row three feet long and puts one at each end and one in the middle. Around these stakes he forms a loop that holds the stems erect and finds this a quick and cheap method of tying and a very convenient one for the pulling of flowers or cuttings. These last stakes are some thirty inches above ground and keep the tallest varieties in good shape. One of the other growers uses a wire stake which costs him two cents each. He claims that the first really good flower pays for the stake, that they are easily adjusted and are good for at least ten years. It was, however, considered best to have the two cents first as it sometimes happens that the two cent flower does not materialize.

Varieties were discussed from a Septem-

ERIANTHUS RAVENNÆ.

ber basis of view and it was the consensus of opinion that Flora Hill has all of the points necessary to a good paying white. Gold Nugget, if it follows up its promises, seems likely to take the same place among the yellows. Jubilee was considered a grand scarlet but there is room for a scarlet Flora Hill. It was a cause of surprise that the good points of Triumph were not recognized by the trade earlier than they were. With one of the growers Albertini propagated this month for next winter's bloom was considered a very profitable and satisfactory sort. Kohinoor, as it was grown around Chicago the past summer, was considered a fine variety for summer bloom on account of its size, good make up and the fact that it was a veritable snow storm of bloom.

Three out of these four growers are trying their hand on seedlings and this seems to be the proportion the whole way through the trade. It was hinted that eventually we will all be growing our own seedlings and that the introduction of seedling carnations will become overdone. ALBERT M. HERR.

THE CARNATION IN CUT FLOWER WORK.

For dinners this flower has been but sparingly used, as its colors do not work effectively under artificial light, but for luncheons nothing is more satisfactory than a plateau of carnations, all colors intermingled, if you please, with spikes of their own foliage among them. Arranged in this way, they find many admirers, for the colors and form are such as nature delights to throw together in the wild flowers with the utmost freedom, and the cultured eye finds nothing to offend, a truth which applies to no other florists' flower as it does to the carnation.

If the decorator wishes to make a carnation garland over a door or mantel, smilax may be used as a base. The flowers, long stems and all, are attached at irregular intervals of eight or ten inches, in loose, dainty bunches of twelve or fifteen flowers, a single wire being used to fasten each handful; but in such work use only one color. If the garland is around a canopy, have the carnations of the same color as the other flowers used in the canopy. Whether for plateaus, baskets, festoons or vases, carnations should never be wired. When used in vases, on mantel or canopy, never mix them with other flowers. A vase of American Beauty roses, one of carnations and one of violets, all on one mantel, is a violation of one of the first principles of art. Concentration of effect is half the battle and it is not the quantity of flowers used, but the manner of their arrangement that makes your work either effective or otherwise.

People take kindly to the free use of the carnation in decorative work. I have often noticed how, in the drawing room, they will drift up to the mantel and take a carnation for a boutonniere or hand it to a companion as a sentimental sort of souvenir. The simple, almost juvenile, character of the carnation makes it very popular with debutantes and, in November and December especially, many carnation bunches are called for. Such bunches should be neither large nor formal and, as a rule, are best confined to one color. Two or three shades of pink may be used in one bunch, however, and it is permissible to mix the splashed or variegated varieties, such as Maud Dean and Eldorado, without regard to color. If you have a bouquet of maroon carnations, its heaviness will be relieved and its effect heightened if, after it is finished, you just add, as if dropped there, five or six big golden yellow fellows. We never make bouquets of white carnations.

It is dangerous to mix carnations in bunches with other flowers. Mignonette, which is a flower of simple character, may be combined with them without giving offence, but roses never. Except in very elaborate bunches, it is well to dispense with ribbon in connection with carnation work, and when it is used a neutral shade of Nile green should be the limit as regards color.

The original impulse of the use of carnations for hand bunches and other work was undoubtedly one of economy, but of late years, as the quality of the blooms offered improved and the prices advanced accordingly, extravagant buyers have come to recognize that they are beautiful and desirable, and thus the carnation has now emerged from its low degree into the full tide of popularity as a flower of the first rank, and usually divides with the rose the honor of gracing the most elaborate and exclusive functions.

Carnations are very acceptable and appropriate for ladies' wear. They do not soil the clothing nor damage delicate fabrics, as roses are apt to do with their thorns, and they can be taken off at home and kept for a day or two thereafter. For a coat flower nothing can compare, it being the only thing which will permit the wearing of a top coat with the assurance that it will look sober late in the evening. For many years European travelers have been extolling the huge single carnation of "dear old London" and asking why we cannot supply them. Well! At last we can, and it is to the enterprising grower that we are indebted.

W. A. BRIDGEMAN.

AMONG THE GROWERS.

A. J. Tharp, of Bedford Station, N. Y., has a cerise carnation seedling which he has named Alice Ball Pinkus, of which Portia is one of the parents. A handsome silver vase suitably inscribed was presented to Mr. Tharp by the family of the young lady for whom the flower was named.

Thos. Devoy & Son, Poughkeepsie, N. Y., are greatly pleased with the variety Louis C. Haettel as an outdoor summer bloomer. The flowers are white flushed with pink and the petals are deeply serrated. Long graceful stems, abundant bloom and delightful fragrance are among its good points.

Dailledouze Bros., Flatbush, N. Y., have a large list of novelties and seedlings on trial. "It takes a good many points to make a good carnation now" is the sentiment expressed by Henry Dailledouze as he shows the visitor about. A cerise seedling now in the fourth year, tall and graceful in habit, a large and handsome flower, looks like a winner provided the slight tendency to bleach on the edges of the petals in bright sunlight is overcome. A white seedling from McGowan has wiry stems and good formed flowers, resembling Nivea, but the blooms are hardly up to the standard of size now required. Among the recent introductions and novelties are many that show up well. Mars is a great scarlet and throws up long straight stems. Whitcomb Riley is of the Lily Dean type. It seems to be a good keeper, makes elegant plants and the stem and fragrance are all that could be desired. Painted Lady, a bright cerise with strong growth and handsome round flower, suffers somewhat in appearance from the slightly incurving edges of the petals, which shows the lighter colored reverse. Cerise Queen is admirable for side benches on account of its dwarf habit. It is Tidal Wave color intensified. America is a grand scarlet, strong growth and big stem. Frances Joost is making a nice growth but the flowers are not yet up to the standard of those exhibited later in the season last year. The same is true of Mrs. Northway Evelina looks rather scrubby, also, up to date. White Cloud is also behindhand in blooming but has made a fine growth Mayor Pingree is better than it was last year. Flora Hill is the carnation of carnations for early crops as seen at Dailledouze's. Victor is also grand at this date. Triumph is one of the rankest of growers; flowers large and color close to Tidal Wave.

New York.

A FULL MARKET.—TRADE INTERMITTENTLY GOOD.—WARM WEATHER AFFECTS THE ROSES.—CARNATIONS HAVE A GOOD PROSPECT.—VIOLETS COMING IN REGULARLY.—RETAILERS PAYING CASH.—PERSONAL NOTES.

Trade during the past week has been fair, all things considered, but present indications do not favor its continuance. The market is abundantly supplied with roses, quite a few chrysanthemums, a daily increasing number of violets most of them very poor and some carnations. Owing to the warm weather prevailing roses are coming in very poor shape, being all open and soft. This was the case especially on Monday morning of this week. As to the demand for roses, buyers favor Beauties because of the show they make and the reasonable figures at which they may be had. Of Bridesmaids and Brides, there is any quantity of them but a very small proportion can be classed as good stock. The Brides are doing a little better than the Maids just at present. Only the best of the latter bring anything quotable in the way of price and the balance falls into the hands of the street dealers. Meteors are selling ahead of white or pink roses.

Carnations continue to do well, when of presentable quality, and there is every prospect that they will enjoy as great a popularity as they did last season. The trouble at present is that they are generally poor in quality. The exceptions bring good figures. Some Flora Hills and Scotts are excellent, command a price and are eagerly sought after. Lily of the valley moves slowly and cattleyas are getting more plentiful.

Some of the retail stores have started in by paying cash. The innovation, if persisted in should be a good thing for all concerned.

The date of the meeting of the New York Florists' Club at which Mr. Hallock is to talk is October 10th not 18th as printed last week.

Mr. A. Wadley has a very large contract to furnish all the plant decorations for L. Sherry's new establishment.

Rudolph John, formerly of Nostrand avenue, Brooklyn, will open a new store at 109 W. Forty-second street.

Joseph Falardeau, formerly with "Edouard" is about to open a store at Broadway and Thirty-eighth street.

Visitors in town: Jackson Dawson, Boston; H. G. Eyres, Albany; J. F. Sullivan, Detroit, Mich., the latter chaperoned by H. A. Siebrecht.

LOUISVILLE, KY.—John Bohrman has recovered from his recent severe illness. Coenen & Bohrman are completing a fine palm house.

Philadelphia.

HOT WEATHER PLAYS HOB WITH KEEPING QUALITIES OF STOCK.—FLOWERS ARE IMPROVING.—FLORA HILL IS THE CARNATION WHICH BRINGS THE FANCY PRICE.—VIOLETS ARE IN.—FLORISTS' CLUB MEETING.—A PICTURE OF THOMAS CARTLEDGE.—PERSONAL AND OTHERWISE.

With the temperature at 82°, we have been anything but comfortable in this Quaker City. Should this state of affairs continue much longer the fakirs will be in their glory and prices, which were taking on a brace, will lean the other way. Scarcely anything keeps in a salable condition for the second day, and many of the pink and white sunflowers carried by the growers were nice rose buds when packed by them early in the morning.

All stock is improving. Beauties are seen with stems from thirty to thirty-six inches in length and for the best of these $2 per dozen is asked. A few of the best teas have sold for $4, but $3 is nearer the price. Carnations are much more plentiful, but do not keep very well and cannot be carried two days as yet. The prevailing figure is $1, although $1.50 is asked for some selected stock and a few nice Flora Hill have sold readily at this price. Quite a few growers seem to have this variety and it is reported to be doing well with all of them. The first double violets, and right fair flowers they were, came on the market through the medium of S. S. Pennock Thursday, September 29, at 50 cents per 100. Singles are poor as yet and bunches of about 100 flowers sell for $1.50 per dozen. A few Lady Fitzwygram are coming in and sell for $1.50 per dozen, but there are no other chrysanthemums in sight as yet.

A very interesting and instructive meeting of the Florists' Club was that of October 4. There was a good attendance and H. E. Michell read a paper on what he saw while abroad, which, together with the bright thoughts that occurred to him as he progressed, gave the members a good idea of all that he saw. His remarks were heartily applauded and he received the thanks of the club. A beautiful crayon picture of the late treasrer, Thomas Cartledge, was presented to the club by President W. K. Harris, who said:

"This club has expressed a desire to have a picture of our late treasurer, Thomas Cartledge, to adorn the walls of this room, and that his portrait might oft prompt us to imitate the life of an honest man, so I have thought it a fitting act to express the love and esteem I have always held towards my long acquainted friend to gratify your desire, and it gives me much pleasure to be able to present this mortal shadow of kindness to you; I say mortal, although this picture may endure for generations, yet in time it must succumb to the elements of destruction, but the many kind acts that made his life a life worth living will not perish, but will live and grow brighter and brighter as time measures their age."

John Westcott received the gift on behalf of the club in a few well chosen remarks, saying that he hoped the bright example Mr. Cartledge had set the community would never be forgotten.

The election of officers was settled by the secretary casting the ballot and President W. K. Harris, Vice-President John Westcott, Secretary Edwin Lonsdale and Treasurer J. W. Colflesh will serve for the ensuing year. The secretary read his report, which shows 163 active, eleven associate and eight honorary members. Three members were lost by death the past year. The treasury was also reported to be in a healthy condition.

The question for the next meeting is "The Coming Carnation Convention." Every member of the club interested in the divine flower is expected to do a lot of thinking and devise plans that will make this the banner convention of the society. Secretary Herr will open the discussion. Mr. A. W. Smith, of Pittsburg, was an interested listener this week.

Henry Dotty was killed September 29 at Magnolia, N. J., by being run down by an express train while crossing the track in a wagon. Deceased was a Frenchman and quite familiar to the store men; a violet salesman for the last ten years, he first sold for Mr. Corbin and later for Mr. Supiot. John Shellum was thrown out of a wagon and painfully, but not seriously injured one day last week. His son was also badly hurt in the same way a month ago and there is now one bay horse, kind and gentle, for sale cheap.

Milton W. Woodruff was married to Miss Juliana Koester last Wednesday evening. Mr. Woodruff is chief clerk at Wm. C. Smith's commission store, 1604 Ludlow street.

Vice-president John Habermehl is now the title, he having been recently elected to this position by the associated bowling clubs of this city. Bowling matters are moving along merrily. A match between the regular and associate members is down for next Wednesday night. We are sorry to see our Buffalo friend is mad; that is, bowling mad, for "Those whom the Gods would destroy they first make mad," and from his present condition it would seem that his bowling talent was doomed to destruction. We would like to wager our "200" Buffalo friends that less than an average of 160 will win next year provided everything is regulation. K.

Boston.

FRUIT AND VEGETABLE SHOW OF THE HORTICULTURAL SOCIETY.—MEETING OF THE GARDENERS' AND FLORISTS' CLUB.—FRUITING SHRUBS AT ARNOLD ARBORETUM.—NOTES ON CURRENT TOPICS.

The annual fruit and vegetable show of the Massachusetts Horticultural Society was held September 29-30. The exhibition was of the usual high degree of excellence throughout. A notable group of plants in one corner of the hall was particularly attractive to the floriculturally inclined visitors. Among them were specimens of Dracæna Godseffiana, Acalypha Godseffiana, a seedling Cattleya Loddigesii × gigas and Watsonia Gardnerii, all exhibited for the first time by Oakes Ames, and for the first three of which silver medals were awarded. Silver medals were also given to George McWilliam for a plant in bloom of seedling Dipiadenia Elsa Whitin and to J. T. Rothwell for a fine specimen of Cypripedium insigne Sanderæ. The annual election of officers of the Society took place on Saturday, October 1, and resulted in the choice of the regularly nominated ticket headed by president F. H. Appleton, being the same list as elected last year with a few minor changes in standing committees.

The Gardeners' and Florists' Club gave a free entertainment in Horticultural Hall on Tuesday evening, October 4, Robert Farquhar being the lecturer, and scenes in and about the Yellowstone Park being his subject. A series of beautiful stereopticon views of the wonderful hot springs, craters, geysers, canons, glass mountains and other natural formations in this great national reservation illustrated the descriptions given by the lecturer which were exceedingly interesting throughout. Previous to the entertainment the regular session of the club was held. The only business of importance transacted was the appointment of Messrs. Westwood, Finlayson and Wheeler as a committee to nominate officers for 1899.

The Arnold Arboretum has been brilliant during the past month with the display of ornamental fruiting shrubs. Among those most unfamiliar, yet most beautiful, are Cratagus pyracantha Lelandii, which is weighted down with heavy masses of bright orange vermilion fruit, and Symplocos cratagoides with an abundance of lovely porcelain blue berries, the unusual color of which is always sure to attract attention.

Welch Bros. have secured additional space on the floor above that which they have been occupying, thus affording needed facilities for a convenient office and a show room for sheaves and other supplies, which they have connected with their main floor by a new stairway. They anticipate a heavy business this season.

D. Zirngiebel has been kept busy outside of his regular florist business, building, remodeling and heating greenhouses in the neighboring towns. More work of this character has been offered him this season than he could undertake.

The stockholders of the Co-operative Flower Growers' Association held their annual meeting and dinner on Saturday, October 1. The old board of officers and directors of last year was re-elected.

Begonia Gloire de Lorraine does not import well. A recent invoice for W. W. Edgar came in bad shape. Mr. Edgar has, however, a very large stock of home propagated plants that are in excellent condition.

N. F. McCarthy has added a phonograph to his office equipment. He expects to have it in good training soon.

Chas. Harvey, of Highlandville, was married to a young lady of Rutland, Mass., on Wednesday.

John Galvin accompanied the Ancients and Honorables on their tour to Quebec on October 3.

Visiting Boston: Martin Reukauf, representing Bayersdorfer & Co., Philadelphia; Robt. Patterson, Portsmouth, N. H.

Chicago.

A WEEK OF PECULIAR CONDITIONS.—BUSINESS GOOD, BAD AND INDIFFERENT—LIKEWISE STOCK.—THE DELUGE OF CARNATIONS.—DAHLIAS IN ANY QUANTITY.—AMERICAN BEAUTIES ARE SCARCE.—CURRENT HAPPENINGS.

This has been a week of contradictions. To begin with, the weather has run the scale from summer temperature almost to the frost mark and, of course, the change has produced its accustomed effects. Early in the week there was a considerable over-supply, particularly in carnations, but in the past few days the cut has been considerably restricted. The qualities of stock have been as varied as its quantity and the volume of trade has shifted here and there, some dealers reporting little doing while others have had all the custom they could supply.

Good flowers have brought good prices; particularly is this true of American Beauties, of which the cut seems inadequate to meet the call. Of course roses were rather too widely open during the hot days but toward the end of the week the blooms were as good as could be desired at the price. The deluge of carna-

tions gives an indication of what may happen this winter, but here, also, there is a difference of opinion, as many growers believe there will be no over-supply or cheap prices for good flowers after frost cuts off the dahlia crop, which is just now meeting all demands for cheap flowers.

Chrysanthemums have been received in increasing numbers this week and Lady Fitzwygram has been reinforced by Merula and Mrs. H. Robinson. The blooms were in fair demand, although the qualities were not what they will be in another few days.

The funeral of the late Burt Eddy took place Saturday, October 1, the interment being at Mount Greenwood cemetery. The pall bearers were Randall Reed, A. L. Vaughan, Stephen Reddick, Alex. Henderson, Henry Bruns and John Degnan. There were numerous floral offerings, those from friends of the deceased in the trade including a wreath of white roses from E. V. Hallock and August Rhotert, New York; a loose bunch of Bridesmaid roses from J. W. S. Butt, Portsmouth, Va.; crescent wreath of galax and cycas leaves from employes of Vaughan's Seed Store, Chicago; wreath of mixed flowers from Vaughan, McKeller & Winterson, Chicago; and a wreath of pink roses from the employes of Vaughan's Seed Store, New York.

Walter Kreitling, John C. Schubert and Gus Lange represented the florists at the Omaha exposition Chicago Day. Mr. Kreitling had charge of the Board of Trade decorations on the Chicago, Milwaukee and St. Paul train.

The Hinsdale Rose Company, of which A. G. Prince is secretary, is re-piping and re-laying the glass at its large establishment and is installing a new 125 horse-power boiler. The chimney has been rebuilt and its top is now ninety feet in the air.

It is no wonder that growers have no complaint to make when one firm of their number is able to show receipts for last week sixty-five per cent in excess of the same week last year and with only a comparatively small increase in their glass.

John Weyland, of Evanston, was awakened at 2 o'clock Tuesday morning by the sound of crashing glass and found three men, presumably intoxicated, smashing the roof of his house with fence pickets. They fled before the police arrived.

For almost an hour Tuesday evening Amelia Larsen was imprisoned on the second floor of W. W. Barnard & Co.'s seed store. A hook and ladder company was preparing to effect a rescue when employes arrived with keys.

Mrs. J. Austin Shaw has been spending this week in Chicago with Mr. Shaw who is in charge of Siebrecht & Son's auction at 114 Wabash avenue.

Some of the finest Wm. Scott and Lizzie McGowan carnations which have come to this market during the past week have been shipped in by E. E. Boynton, of Sycamore.

Charles Schafer has been quite ill since the first of August but has now so far recovered as to be able to attend to business.

A. L. Randall has put in a full line of florists' supplies at his commission house at 4 Washington street.

Violets are in market every day but in very restricted quantities. They are small in size but the fragrance is good.

Horatio N. May, a Lincoln Park commissioner, died at Badnenheim, Germany, on October 1.

Visited Chicago: Mrs. F. X. Millman and daughter, Mrs. Beall, of Cumberland, Md.; Fred. J. King, Ottawa, Ill.; Thos. Archer, St. Joseph Mich.; W. G. Berterman, Indianapolis, enroute to California; J. A. Wilson, Milwaukee; Frank Stuppy, St. Joseph, Mo.; W. A. Reiman, Vincennes, Ind.

Baltimore.

COOL WEATHER CAUSES A STIR.—SHORT SUPPLY OF GOOD BLOOMS.—RETAILERS HAVE MADE IMPROVEMENTS.—NO CHRYSANTHEMUM SHOW THIS YEAR.—CLUB MATTERS.

Baltimore is now enjoying cool weather, giving business men and business in general a very decided feeling of activity, though things in the florists' line are yet far from brisk. There is little going on in the social world. The recent visit, however, of the English cricketers to the Catonsville Country Club, and the entertainments in their honor, caused a slight stir this week among the retailers.

The exceedingly hot weather of early September caused the quality of stock to fall below the average but now qualities are improving again, although good blooms are still scarce and unequal to the demand. Beauties are especially scarce, while there is a continuous demand for Bridesmaids and Meteors and also for carnations, which are now coming in. There has been an unusual demand for dahlias this season, and some very beautiful varieties are being shipped to our wholesale houses.

One of the good results of the recent inactivity in business was the opportunity to clean up and renovate the retail stores, of which several took advantage, notably W. J. Halliday and Sam'l Feast & Sons, who have made some much needed improvements and are now ready for the rush of winter trade. E. A. Seidewitz has enlarged his store and added largely to his bulb department. H. Bauer is now putting a new roof to one of his greenhouses which was destroyed by hail.

The florists of Baltimore have decided not to have a chrysanthemum show this year, as the public do not appreciate their efforts. The show of two years ago was one of the best, but a financial failure, and the treasury of the club was taxed severely to make up the deficiency caused by the lack of attendance. 'Tis a pity, too, for what is more beautiful than the gorgeous blooms of the chrysanthemum? But everything must have its day. Now it is the carnation which holds "fashion's fickle fancy" for a time, a flower well worthy of all that can be said or done for it. The club is seriously considering the advisability of holding a carnation show.

The Gardeners' Club held its bi-monthly meeting on September 26, with only a small number present. Vice-president Wagner very capably filled the chair. R. Vincent, Jr., won for himself the thanks of the club for his large display of dahlias, exhibiting fifty-five different varieties, all worthy of the highest praise. Mr. Pentland suggested a talk upon the Omaha convention and Mr. Vincent was appointed to discuss this subject at the next regular meeting.

John Weidey of the Alaska Union Gold Mining Co., has returned from Union City, Alaska, for a short visit to his native city. He was engaged in the florist business in Baltimore up to a few years ago and was a prominent member of the Gardeners' Club, being one of its founders and at one time an officer.

Holland bulbs are in and are decidedly below the average, many complaints being heard on all sides. A. R. J.

Cleveland.

HOT WEATHER CAUSES STOCK TO BE PLENTIFUL.—CHRYSANTHEMUMS.—PASSING OF THE DAHLIA.—FLORISTS' CLUB ELECTS OFFICERS.—OTHER MATTERS.

The very hot weather we are now having is serving one good purpose for otherwise the supply of flowers would be almost hopelessly short. As it is, hot weather and all, there is a decided scarcity at times and the choice for all practical purposes is limited to roses, carnations and dahlias. Chrysanthemums are seen in very small quantities and do not seem to go very well, a fact not to be wondered at as the only color offered is white, and not very good white at that. However, yellow and pink will soon be in, as several growers have them almost ready to cut. The varieties are Marion Henderson and Glory of the Pacific, and the white to be in at the same time is Mme. Bergemann.

Carnations have been in increased supply, owing largely to the weather, and are fair in quality. The price holds steady at about $1 per hundred. Roses have not changed from quotations of some time ago and are not likely to increase now just on the verge of the chrysanthemum season. A few early violets are to be seen now and again. They are of the single type and are not yet very good nor in sufficient supply to quote a price on.

Dahlias are coming in plentifully and are good in quality with those who are able to grow them at all. Many florists, for the past year or two, as well as this season, have found this usually easy proposition beyond their ability to solve. In some cases they have apparently grown well, but have absolutely refused to set any buds. With others they have rusted, turned yellow, or remained stunted the entire season through. What the trouble is has puzzled the growers considerably, as land, treatment and weather conditions have not been sufficiently changed to account for the difficulty. In most cases, in fact, all the growing conditions were practically unchanged from other and perfectly successful seasons. Nearly every one, however, views the passing of the dahlia with equanimity as they are generally an exceedingly uncertain and usually unsatisfactory flower to grow; indeed, were it not for the fact that they help to fill a vacancy just at this time of the year they would be little lamented if never seen. Some of the best of them that are offered are coming from Storrs & Harrison, and these are really good, having good stems, fine flowers and run in desirable shades.

The Cleveland Florists' Club held its annual election September 26. Adam Graham, who has been president since the club's organization in the fall of 1895, retired to private life and was succeeded by E. H. Cushman, well and favorably known to the trade in general for his connection with the Cushman Gladiolus Company. Vice-presidents for the ensuing year are S. N. Pentecost and James Eadie, also entitled to certificates of merit, and A. H. Graham will endeavor to hold down the secretarial chair for twelve months as the successor of G. A. Tilton. Our highly esteemed friend Herman A. Hart will continue as treasurer for another season.

In town lately were: Paul Berkowitz, of H. Bayersdorfer & Co., and Joseph Rolker, of A. Rolker & Sons. A.

MONROE, N. Y.—The greenhouses of F. Charlton, with contents, have been sold to G. W. Brooks.

THE AMERICAN FLORIST

Subscription $1.00 a Year. To Europe, $2.00.
Subscriptions accepted only from those in the trade.

Discounts, 6 times, 5 per cent; 13 times, 10 per cent; 26 times, 20 per cent; 52 times, 30 per cent.

The Advertising Department of the AMERICAN FLORIST is for Florists, Seedsmen, and dealers in wares pertaining to those lines ONLY.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Wednesday to secure insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

JOHN M. SAMUELS, who was Superintendent of Horticulture at the World's Columbian Exposition, died recently at his home in Clinton, Ky.

A SUBSCRIBER asks whether florists of the Hebrew faith close up their stores in the large cities on holidays observed by the Jews.

IT speaks well for a novelty when florists on seeing one have sufficient faith in it to have it on hand and thus be able to point to it when soliciting orders.

THE prominent place given to flowers and floral decorations in the street fairs and festivals now so frequent in western cities should be of general benefit to floriculture.

RICHARDIA PENTLANDII, the yellow calla, is a bright yellow in color, nearly as bright as the buttercup (Ranunculus acris) of our meadows, with a rich purple blotch at the base of the spathe.

SWAINSONIA has been used to a considerble extent as a bedding plant this season by Superintendent McCarthy at Swan Point Cemetery, Providence. It has grown well and flowered profusely.

IF a leaky tube develops in your return tubular boiler thus early in the season, have it attended to without delay rather than suffer it to continue a source of anxiety the remainder of the season.

CROTONS which have been outdoors all summer should now be given warm quarters, say 65° at night; and after they have outgrown the lifting process, full exposure to sunlight will benefit them.

IF we would have large cyclamen plants for the Christmas after next, we must not delay sowing the seed any longer, and in all cases we must buy the best strain of seed obtainable and not the cheapest.

E. HAENTZE, Fond du Lac, Wis., sends us a choice assortment of dahlia blooms. Unfortunately they are not named, and we are thus unable to properly indicate the best varieties. A pale yellow, light pink and large white cactus are among the most desirable.

WE read of new wholesale establishments and commission houses being started in various cities this year. It has been predicted by some in the past that this peculiar institution in the flower trade was doomed to an early demise but it does not look that way now. To market a perishable product to best advantage calls for qualities very different from those required for the production of the goods. A man may be a model trader with all the shrewdness necessary for a reputation as such but totally unfit to manage a house of carnation plants; and, on the other hand, it should not offend the best rose or carnation grower in the world if he is reminded that perhaps market trading is not his especial vocation and that the most profitable place in which he can spend his time and his energies is right in the greenhouse with his eye on the help and the benches.

THEY tell us that the palm business shows signs of being overdone in some of the big cities. Judging from the past history of the flower trade, this is only what we might expect. This unfortunate disposition to run all to one product or a limited variety of stock seems to be almost universal. Individuality of action is rare and if the venture be profitable, a mighty host swoops down and ruins it. Lucky indeed is he who finds something that he can do with a reasonable certainty that all his neighbors cannot imitate with success. The palm growers can now sympathize with the Bridesmaid growers and the Scott growers, while the American Beauty growers and the erica growers can look on and chuckle in their security.

Express Companies and Revenue Stamps.

Shippers will be interested in the decision of Judge Frazier rendered at Detroit, Mich., in the suit brought by local shippers to compel the American Express Company to pay for revenue stamps required on receipts for packages forwarded by them. Judge Frazier's decision was to the effect that the law requires an express company to give a valid receipt for goods entrusted to them and that a receipt would not be valid without a stamp. Raising the rate for transportation one cent per package as a resort to get the cost of the stamps out of the shipper is, by the judge's ruling equivalent to impeding the action of the law and is therefore illegal. The decision was entirely in favor of the petitioners and a mandamus was ordered compelling the express company to affix the stamps on their receipts. Whether an appeal will be taken is not yet known.

Greenhouse Building.

Helena, Mont.—Charles Horn, carnation house.

Waterloo, Ia.—Williams & Crittenden, extension 20x30.

Brutus, N. Y.—W. M. Howe, one greenhouse.

Wrentham, Mass.—Herman Myers, one commercial house.

E. Fairhaven, Mass.—S. S. Peckham, one house, 20x65.

Norwood, R. I—N. D. Pierce, one commercial house.

Catalogues and Cut Flower Price Lists Received.

James Vick's Sons, Rochester, N. Y., bulbs, plants and seeds; John C. Teas & Son, Carthage, Mo., shrubs; August Rolker & Sons, New York, N. Y., bulbs; Alvin Nursery Co., Alvin, Texas, fruit trees; The Lovett Co., Little Silver, N. J., bulbs; Holton & Hunkel Co., Milwaukee, Wis., bulbs and seeds; Peter Henderson & Co., New York, N. Y., bulbs and seeds; Bredemeier & Drege, Pallanza, Italy, bulbs and plants; Ellis & Pollworth, Milwaukee, Wis., cut flowers; W. A. McFadden, Cincinnati, O., cut flowers; A. G. Prince & Co., Chicago, Ill., cut flowers; Cincinnati Cut Flower Co., Cincinnati, O., cut flowers.

The Late Burt Eddy.

Another bright star has set, never to shine upon earth again. Burt Eddy is dead! He was the peer of all salesmen I ever met. So kind and cheerful, so well informed upon all topics modern or ancient, and so full of humor of the highest type. His visits brought joy. He was not pressing in business, yet his magnetism seldom allowed him to go empty handed. He was always a welcome visitor, and it saddens my heart, when I think that I shall never see his honest countenance nor hear his cheerful voice again. WM. K. HARRIS.

Society of American Florists.

STATE VICE-PRESIDENTS.

Very few of the state delegations at Omaha having taken action regarding their respective official representatives in the Society for the coming year, it now becomes the duty of President Gude to make these appointments. Frequent criticism has been made regarding the efficiency of these officers and the annual report of horticultural happenings in their jurisdiction which is now required of them makes it further necessary that great care be exercised in their selection. With this object in view, advice and recommendations as to who would be regarded as acceptable appointees will be welcomed and are hereby earnestly solicited from any and all members of the S. A. F. in the different states. Address all correspondence on this subject to,

WM. J. STEWART, Secretary,
67 Bromfield street, Boston.

AMERICAN GROWN BULBS.

The hyacinth, tulip, narcissus, candidum and other bulbs from the State of Washington which created such a sensation at the Omaha Convention of the S. A. F. were forwarded, after the close of the Convention, to Washington, D. C., and President Gude took early opportunity to show them to Secretary Wilson and acquaint him with their history. The secretary was greatly interested and expressed his willingness and desire to do anything in his power to aid the Society in its efforts to encourage the development of bulb growing as a home industry. By his advice—the consent of Mr. Gibbs, the grower of the bulbs, having meanwhile been secured—the bulbs were turned over to Mr. Wm. Saunders, the practical horticulturist of the Department of Agriculture, to be grown and flowered and a careful record of results to be made. Mr. Saunder's letter acknowledging receipt of the bulbs was as follows:

"WM. F. GUDE, ESQ., MY DEAR SIR:—The bulbs grown in the State of Washington, which you left here for inspection of this Department, are pronounced to be very good indeed, and if they can be produced at a profit, it will introduce a new industry into this country.

We will grow these bulbs and you may expect a further report upon them when they flower.

Yours respectfully,
(Signed) Wm. Saunders, Horticulturist, etc."

WM. J. STEWART, Sec'y.

The Dutch Horticulturists.

At the August meeting of the Dutch Horticultural and Botanical Society the floral committee made the following awards: First-class certificates to the Horticultural School of Wageningen, for Canna hybr. O. J. Quintus; to E. H. Krelage & Son, for Chrysanthemum maximum Triumph, for cactus dahlias Leonora, Regulus and Ruby, for Gloxinia hybr. grandiflora Cyclop and Gloxinia hybr. grandiflora Goliath; to W. van Veen for Chrysanthemum maxium Tri-

umph and Dahlia Britannia; to K. Wezelenburg for Chrysanthemum maximum Triumph; to the Horticultural School of Frederiksoord for Heliotropium Peruvianum fol. var.; to Gratama & Co. for Rosa hybr. bifera Souvenir de Mme. Joseph Metine and Rosa Indica fragrans Mme. Yvonne Gravier; to G. A. van Rossem for Rosa Indica fragrans Auguste Waltine. Certificates of merit to the Horticultural School of Wageningen for Canna hybr. Oranjevlag and Canna hybr. Wageningen; to K. Wezelenburg for Centaurea montana rosea and Chrysanthemum filiferum; to G. A. van Rossem for Rosa Indica Mlle. Anna Chartron. A botanical certificate to the botanical garden of Leiden for Boea Commersoni.

City Water for Plants.

ED. AM. FLORIST:—The water from our city mains contains the following: Potassium sulphate 0.70, sodium sulphate, 1.86, sodium chloride 1.94, calcium sulphate 13.60, calcium carbonate 8.90, magnesium carbonate 10.30, iron oxide and alumina 0.21, silica 1.72. You will oblige by stating whether such water will be injurious to plant life, including roses, carnations, palms, begonias, etc. C. C.

The amounts of different compounds mentioned as contained in the water aggregate less than forty grains a gallon. If this water were applied to the depth of one inch over one acre of soil the amount of mineral matter thus added to the soil would be about 130 pounds. It is safe to say that this water could be used freely without injury to plant life.

L. L. VAN SLYKE.

Philadelphia Notes.

I ran up against little Johnny, noontime yesterday in Kift's ante-room. "Helloa, Johnny! Getting anything to do?" After taking a big bite at the sandwich—"You bet your life, been hustling all the morning!" Look out for little Johnny, he'll be heard from one of these days. If there's anything in this world I delight to see it's a hustling little boy. Pity they're so scarce.

The "Brave old Duke" thinks picnics can be run very economically now that we've annexed the Sandwich Islands. Men have died for better wheezes than that. Things look well around the "Duke's" place, especially the arecas and American Beauty roses. Orchids are still one of the specialties here, although there's "No money in them." Sometimes these nabobs of the orchid protest too much!

Farmer Battles' place overflows with goldenrod and fall asters, good things if one has the wit to know how to handle them. A seasonable tinge to one's store is always good advertising. G. C. W.

Wyncote, Pa.

Arecas, kentias, cocos and latanias! One need but take a glance at Joseph Heacock's plants to agree with the writer that a more perfect, a cleaner or a healthier looking stock would be hard to point out. What is most remarkable about Mr. Heacock's plants is their uniformity in size and growth. His hundreds of specimen arecas look one like unto the other, and so do his medium and small plants. Mr. Heacock reports increased sales and it is his unqualified opinion that this season will prove one of the most prosperous we have had in late years. This sounds very encouraging and the more so when it comes from a man like Mr. Heacock. HOMO.

Rochester, N. Y.

With the advance of the season store business increases rapidly. A few weeks ago hardly any of the shops were found open after 7 o'clock in the evening; now we often see all hands busy at 9 and later. It is not often that the last week in September brings such activity to the storekeepers.

The ordinary supply of flowers is good and the demand has gradually increased for the last three or four weeks, although prices are rather low. Outdoor stock is still abundant, although roses and carnations are exhibited oftener and in more generous bunches. Violets are here, too, and now and then we see a few orchids brought into prominence. As a rule orchids do not sell readily here, they are too expensive for Rochesterians, yet they are wanted occasionally. J. B. K.

BURLINGTON, IA.—N. J. Burt & Co. have been making a large display of ferns, decorative plants and seeds at the Des Moines county fair.

LYNN, MASS.—The festival which closed the annual exhibition of the Houghton Horticultural Society was largely attended. The exhibition was a pronounced success.

POUGHKEEPSIE, N. Y.—At the meeting of the Dutchess County Horticultural Society October 5, a paper was presented by A. H. Loughren on the subject, "How Parks Should be Managed."

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

Every paid subscriber to the AMERICAN FLORIST for the year 1898 is entitled to a five-line WANT ADV. (situations only) free to be used at any time during the year.

SITUATION WANTED—By a young man in a small retail place; age 20, single, steady; wages $20 per month and board. RELIABLE, care Am. Florist.

SITUATION WANTED—By experienced florist and designer; foreman; specialties, roses, carnations, mums, violets, best refs G, P.O. Box 547, Alliance O.

SITUATION WANTED—By young man as assistant in growing cut flowers; two years to the trade. Good worker and good recommendations. Address A B, care American Florist.

SITUATION WANTED—In a first-class cut flower establishment, by an experienced and thoroughly competent young lady Address FLORIST, care Mail Carrier No. 1, Springfield, O.

SITUATION WANTED—By an American Beauty grower; also first-class grower of cut flowers; competent to take charge of commercial place Married. Good references. FLORIST North Wales, Pa.

SITUATION WANTED—As head gardener and florist on gentleman's private place or institution by middle-aged, married man; no incumbrance Very best recommendations. B H R, care Am Florist.

SITUATION WANTED—By an experienced seedsman, as foreman or as seed salesman on the road. Have eighteen years' experience. References cheerfully furnished. Address C H S, care American Florist.

SITUATION WANTED—By a young, young German; 5 years' experience; good worker; good fireman—steam and hot-water A No 1 references Address Box 611, Alexandria Bay, N. Y.

SITUATION WANTED—As foreman by a first-class up-to-date grower, good in all branches of the business; only first class place wanted Wages $75 per month; open now or next spring Address FOREMAN, care American Florist.

SITUATION WANTED—By married man, 20 years' experience in flowers, fruits and vegetable gardening; all-round grower of greenhouse plants best references. Commercial or private place. Address F O M, care Am Florist, 67 Bromfield st, Boston.

Situation Wanted

By married man, practical grower of plants and cut flowers. Twenty years' experience. Five years in present place; leaving on account of reducing expenses. Well recommended.

J. A. WILSON, 306 27th St., Milwaukee, Wis.

WANTED—Nursery agency for northern Texas. Address F. A SPRINGER, Gainesville, Tex.

WANTED—Young man, with experience, to manage cut flower stand in market Give references and wages. F. M WELFER, Greenfield Ave., Pittsburg.

WANTED—Young man as assistant in retail florist store; must have a general knowledge of the florist business. Address with references. H. F. HALLE, 548 W. Madison St., Chicago.

WANTED—An experienced florist, gardener and fruit culturist; wages $20 per month and board. If not competent sober and industrious, don't apply. State refs CHAS WHITTENBAUGH, Shannopin, Pa.

WANTED—A good all-round florist, one who especially understands growing roses, carnations, violets and general stock Single man preferred. State wages with board. Address with references Box 504, St. Joseph, Mo.

WANTED A capable man to take charge of night firing in a large commercial establishment; must have thorough experience in running both hot water and steam boilers and must come well recommended as to ability, sobriety, honesty and steadiness. The position is a steady one. The work to be done is extensive and requires close attention, but systems are all conveniently arranged Only first-class men of ability need apply. HENRY A. DREER Lock Box 1678, Philadelphia.

FOR SALE—Four greenhouses, nearly new Good retail stand. A CLAUS, Springfield, Ill.

FOR SALE—At a bargain, greenhouse property in Greater New York, opposite three cemeteries. Little cash needed Particulars M, care Am Florist.

FOR SALE CHEAP—Three greenhouses, four lots and stock in the best and liveliest city in America, unincumbered Apply 558 South 1st St., Cripple Creek, Colo.

FOR SALE—12 acres in Orange Co; 300 trees on the place orange and grape fruit; fine lake front; good winter climate Price, $150 Address ALBERT BUCKWELL, Lake Maitland, Fla.

FOR SALE OR RENT—Good retail stand, 5000 feet of glass (new), has never paid less than $1300 per year net. Must buy stock. Reason for quitting, failing health Address ILL, care Am. Florist.

FOR SALE—Established florist's store on West Madison street, near Kedzie avenue; reason, cannot give personal attention. Rent, only $22 50 per month, including living rooms C J, care Am, Florist.

FOR RENT OR SALE—Greenhouse property, Potsdam, N Y, 4000 ft. glass, land, barn; residence if required; established retail business. Good chance for competent man F W PEST M D, Port Jervis, N Y.

FOR SALE—One good second-hand 25-horsepower upright boiler, 5½ ft. high and 4 ft wide; all tubes new 3 years ago. Also one 4-horsepower upright boiler. HARRY J MCFARLAND, Box 14, Marshalton, Chester Co., Pa.

FOR SALE—Florist, seed and nursery business, established 7 years, on the best business street in Seattle, Wash. Cleared $1356.40 from last November to July $1500 cash for the business including brick store 16x20 feet worth $800 Address at once PACIFIC NURSERY & SEED CO., 1313 3d Ave., Seattle, Wash.

FOR SALE—On account of age and poor health, three greenhouses, each 20×165, two filled with Beauty Bride Bridesmaid and Perle roses planted in July, and in excellent condition; the other is filled with carnations and chrysanthemums also fine; one frame 6×75 of pansies; one 6×140 of Marie Louise violets; 350 azaleas in 6 and 8-inch pots; one large lotus pond, filled 10 others; one never failing well of water; good boiler pump and tank; good houses; three acres good land; good stable and wagon shed. The best place around Harrisburg or in the county. For terms, address T. J. WINTERS, 943 North 7th St., Long Distance 'Phone 2454. Harrisburg, Pa.

TO LEASE OR FOR SALE.

In a live junction, 35 miles from Boston. One of the best locations in Massachusetts. Four violet houses 11x85 feet, well stocked; one carnation, rose and palm house 100 feet long, heated by steam and hot water; 100 h tbed sash; about two acres of land. Dwelling house if desired. Address BOSTON, care American Florist.

FOR SALE

A 20-year business, a 20-foot front, 3-story brick house of 10 rooms and cellar; stable 30x50 feet with greenhouse same size on top of stable. situated on Baltimore street 7 squares from city hall. THE SEED TRADE.

AMERICAN SEED TRADE ASSOCIATION.

EVERETT B. CLARK, Pres.; JOS. A. BOLGIANO, 1st Vice-Pres.; S. F. WILLARD, Wethersfield, Conn., Sec'y and Treas.

S. B. DICKS, of Cooper, Taber & Co., expects to sail on S. S. Etruria October 8.

VISITED CHICAGO:—Herbert W. Johnson, of Johnson & Stokes, Philadelphia.

BEAN, pea and onion seeds are the scarce items this season on which prices are to be decidedly higher.

MINNEAPOLIS.—J. E. Northrup has returned from his eastern trip and is now off on another one to the Nebraska seed district.

THE New York Market Gardeners' Association (A. C. Nellis) was awarded the government seed contract on its bid of $70,980.

IT is said that the rule requiring high tests by the Department of Agriculture on seeds purchased thereby is not a dead letter and that some moneys are still held back on former contracts.

PHILADELPHIA.—The business of Wm. Hagemann will now be carried on under the title of Hagemann & Meyer, the latter (Chas. F. Meyer) having entered the concern as a partner October 3.

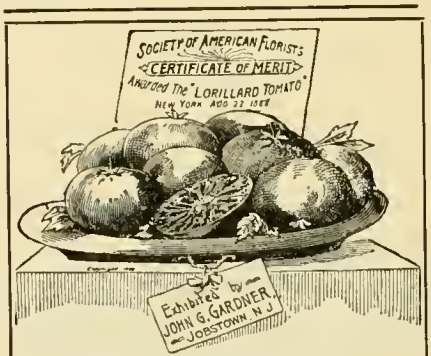
INDIANAPOLIS.—Messrs. Huntington & Page are making a temporary move while their former store is being rebuilt. Mr. S. H. Church's engagement with the Vail Seed Co. has terminated. E. S. Harnden is now with J. A. Everitt, seedsman, and a wholesale department is talked of; Mr. H.'s experience should have landed the government seed contract in a close political state like Indiana this season.

MILFORD, CONN.—The Everett B. Clark Co. report as follows on the Connecticut seed crops: All leading varieties of vegetable seeds will not average half a crop and in some localities not over a fourth. The crop of sugar corn is better, but planting was so very late, owing to excessive rains in spring, that late varieties will hardly be a full crop. Root crops for next year's seeding look very nicely now.

St. Louis.

FALL FESTIVALS MAKE BUSINESS GOOD.—PLANT PREMIUM WINNERS AT THE ST. LOUIS FAIR.

During the last three days trade has improved wonderfully owing to the opening of the Fair, the appearance of the Veiled Prophet, and the ball at the Merchants' Exchange. Stock is abundant, however, and prices do not rule at all high.



The decorations in the hall this year may be said to have been of cut flowers, as contrasted with plant decorations for the few preceding years. The principal decoration was the large fountain in the center of the dancing space. Specimen plants were distributed around the hall and on the staircase by which it was approached. The decoration was in very good taste and reflects credit on the Riessen Floral Company which had it in charge.

Wm. Schray made nearly a clean sweep at the St. Louis Fair in the plant section, having taken first in the following classes: Best and largest collection of greenhouse and stove plants, best collection of palms, best collection of Rex begonias, best twenty-five blooming plants for house cultivation, best pair hanging baskets, best specimen plant, an Araucaria glauca, best arranged group of foliage plants to present the greatest contrast of colors. The C. Young & Son's Company received first for largest and best collection of ferns, best collection of roses in bloom and best twelve geraniums. Mr. Kratz, of Lindenwood, received first on best collection of carnation plants. The C. Young & Son's Company was second in all the classes except that of twenty-five blooming plants for the house, which went to Mr. Kratz, and largest collection of ferns and best collection of carnation plants in bloom, which went to Mr. Schray. R. F. T.

Omaha.

Chicago Day, October 1, at the Trans-Mississippi Exposition made a busy time for all the local florists. Flowers were not to be had at any price. Hess & Swoboda, among other things had a large decoration order from Browning, King & Co., using large quantities of immortelles for piece work and asparagus for festooning, etc. American Beauty roses were a conspicuous feature of this decoration, and visiting florists wondered where they all came from.

Miss C. Arnold could have sold three times more flowers than were procurable, and Messrs. Stewart, Wilcox and Henderson had all the work they could attend to, hustlers as they are.

A Profitable Side Crop.

The tomato is one of the profitable side crops for the florist if properly handled. An important item in proper handling is to start right by getting proper seed. Experience has proven the "Lorillard" the best forcing variety so far; but much of the seed now on the market is not carefully selected as to type. I have taken pains to find something free from this objection, and have pleasure in offering

Lorillard Forcing Tomato...

Specially saved for my trade by the originator Mr. Jno. Gardner.. Pkts., 25c, 50c and $1.00, free by mail. Bulk price on application.

Sutton's Best of All Forc'ng Tomato

Has done remarkably well with those who tried it the past season. I do not know how it is for outside, but it's a dandy for forcing; large, round, deep scarlet, very prolific. Pkt. 40c. mailed free. (No bulk of this to offer at poesant). Give this new sort a trial. Stamps accepted for small amounts.

GEORGE C. WATSON,
Seedsman.....

THE
Gardeners' Chronicle.
A Weekly Illustrated Journal.
ESTABLISHED 1841.

The "GARDENERS' CHRONICLE" has been FOR OVER FIFTY YEARS THE LEADING JOURNAL of its class. It has achieved this position because, while specially devoting itself to supplying the daily requirements of gardeners of all classes, much of the information furnished is of such general and permanent value, that the "GARDENERS' CHRONICLE" is looked up to as the STANDARD AUTHORITY on the subjects of which it treats.

Subscription to the United States, $4.20 per year. Remittances to be made payable to H. G. COVE.

THE AMERICAN FLORIST CO.
324 Dearborn St. CHICAGO.

THE NURSERY TRADE.

AM. ASSOCIATION OF NURSERYMEN.

A. L. BROOKE, Pres.; E. ALBERTSON Vice-Pres.; GEORGE C. SEAGER, Rochester, N. Y., Sec'y.

THE report of improvement in business is very general among nurserymen.

E. SMITH & SONS, Geneva, N. Y., have dealt in nursery stock for fifty-two years.

PECAN trees have become one of the profitable investments in Mississippi and other southern states.

J. G. L. MYERS, of Bloomingdale, Ind., will this month plant 1200 fruit trees, a third each of apple, pear and peach.

THIRTY THOUSAND trees and shrubs are to be planted in Riverside Park, N. Y., this fall at an estimated cost of $18,000.

A NURSERY of date trees of the Tunis, Persian and Fard varieties has been established in the Salt River valley of Arizona.

PRESIDENT STANLEY, of the Wichita Nursery Association, is the republican candidate for governor of Kansas. He is an enthusiastic horticulturist.

New York Scale Law Difficulties.

The nurserymen of the state of New York are in a peck of trouble and all on account of the scale law which their own representatives framed and pushed through the last state legislature.

It seems that when dealers who do not grow their own stock applied for certificates of inspection under the provisions of the new law commissioner C. A. Wieting ruled that the bill permitted inspection of stock only in nursery rows and that he was not authorized to certificate stock on packing grounds even if it had been previously inspected in the nursery and shipped under a certificate. The law prohibits the shipping of stock not accompanied by a certificate and this interpretation, of course, precluded non-growers obtaining a certificate and practically drives them out of business in the state.

Irving Rouse, who with Wm. Pitkin, secretary of the Eastern Nurserymen's Association, drafted the law, made haste to assure Commissioner Wieting that his construction of the statute was entirely different to the intention of the framers of the law and many other equally strong protests were made but were ineffectual in securing a revision of the commissioner's ruling. Every nurseryman in New York wishes to see the law enforced in its true spirit but the interpretation of the department is causing untold trouble as it forces non-growing dealers to buy their stock and pack and ship their orders outside the state, thus cutting off a large proportion of the usual wholesale orders enjoyed by the growers, and no relief is in sight short of the next session of the legislature, which will be called upon to amend the law.

Cuttings can be taken from them now, and they are in fine shape for winter propagating, or will make nice specimen plants for market trade.

THE GEO. H. MELLEN CO., INNISFALLEN GREENHOUSES, SPRINGFIELD, OHIO.

OUR PASTIMES.

Announcements of coming contests or other events of interest to our bowling, shooting and cycling readers are solicited and will be given place in this column.

Address all correspondence for this department to Wm. J. Stewart, 67 Bromfield St., Boston, Mass.; Robt. Kift, 1725 Chestnut St., Philadelphia, Pa.; or to the American Florist Co., 324 Dearborn St., Chicago, Ill.

IT is estimated that no less than fifty new bowling alleys have been built in Brooklyn, N. Y., during the past summer.

Do not fail to send $10 to J. F. Wilcox, Council Bluffs, Ia., and make formal entry of your bowling club as a participant in the great tournament to take place at Detroit next August.

THE local newspapers of Cambridge, Mass., speak of J. W. Shaw, the florist, as one of the famous champion bowlers of the University City. The Boston aggregation should secure him for the Detroit struggle.

St. Louis.

The trophy winners are still doing good work on the alleys, as is evidenced by the following score rolled last Monday night.

Name.	1st	2d	3d	4th	Av.
C. C. Sanders	170	123	148	189	160
J. J. Beneke	123	154	156	165	150
C. A. Kuhn	126	158	143	144	140
D. Finlayson	121	113	151	161	137
E. Schray	143	115	122	149	132
J. W. Kunz	117	120	100	157	120
R. F. Tesson	106	109	129	121	116
F. J. Fillmore	107	92	115	105	105

Cleveland Bowling Matters.

The contemplated action of the Cleveland Florists' Club is to extend to all club members, irrespective of bowling club membership, the privileges of the alleys in common with the bowlers. The bowlers have always had good times together and there is a general belief that this extension of the use of the bowling alleys will do much to increase interest in both club meetings and bowling, and promote a more fraternal feeling all around. A.

With Chicago Bowlers.

C. S. Stewart was the star of the contest September 30, although E. F. Winterson was the player who rolled the three best games. In the third game J. S. Wilson rolled four straight strikes and Stewart went him one better, but missed his sixth. His 184 was the high score of the evening.

Name.	1st	2d	3d	4th	Av.
E. F. Winterson	164	167	138	...	156
J. S. Wilson	142	165	173	131	152

Jno. Degnan	126	134	140	141	135
W. Kyle	134	113	144	...	129
S. Snedeker	116	111	159	...	128
C. S. Stewart	96	116	184	...	122
W. J. La Grotte	116	96	110	...	107
J. C. Vaughan	85	112	...	...	98

Buffalo Bowlers.

The bowling club has not been organized as yet but every one looks forward to it. Some favor having it entirely separate from the Buffalo Florists' Club, enabling everyone in the business to join without being a member of the club, and then the team bowlers be made to join the Buffalo Florists' Club before being allowed to roll at Detroit or any other city where the S. A. F. meets, while others wish to accept only members of the Florists' Club. If the first proposition is adopted we will have a large club and can then pick out bowlers who will come home with trophies, medals and everything else but the cities they bowl in. We have some young stock in the different stores that is almost good enough now to go in fast company. W.

Among the Philadelphia Sports.

What a flourish that was in your Buffalo notes last week. It made our bowling boys grin. They keep on saying nothing, but one can see they're not greatly scared. Those Buffalonians must not suppose they're the greatest things that ever happened. Remember we still have our Habermehls and Browns and Kifts and a score more in the heyday of vigor. As for shooting, bicycling or oratory Philadelphia can give them a Roland for their Oliver every time and, withal, might even go them one better. Besides that, look where we stand on poetry! So long as the Deacon abides in our midst we are invincible on that line. And then we have Charlie to give the foghorn shouts of encouragement. And where can he be matched? Go to, Buffalo. Don't shout too loud until you're out of the woods.

George Moss has developed into a dependable bowler of the first-class in the past twelve months. He will stand a good chance of a place in the best twelve in the coming contest.

Horace Dumont, another commission man, is with us again and, although a bit erratic so far, will no doubt give a good account of himself during the winter.

George Anderson, under whose captainship the Philadelphia bowlers won some of their most important trophies in days gone by, still likes to roll an occasional game with the boys. His strong forte is shooting, now-a-days, but he can hold his own with most of the sports in anything that comes along.

John Westcott is still giving us an occasional 200. For his years he's certainly a wonder. "Age cannot wither nor custom stale his infinite variety." He's the life and soul of the club room, first, last and all the time. One feels younger and more sprightly every time an evening is spent in his company.

Isaac Kennedy, gigantica robustum, made his first appearance for the season at the Saturday evening match last week. The air was blue for a while but after a little the old cunning seemed to return to his strong right arm and everything was lovely.

Dennis Connor is still one of the first six although he kept quiet until the brown October days came with their cooling breezes. Wisdom, thy name is Dennis.

Next Wednesday evening, the 12th inst., will witness the first of a series of three match games between teams picked from the regular and associate membership respectively. The personnel of the Regulars will be; Brown, Connor, Westcott, Watson, Kift and Longinette; and the Associates: Archer, Melle, Palmer, Goebel, Rennear and Moore. There are a good many side bets on the outcome already, opinion being pretty evenly divided for both sides as winners. Being so equal in strength a great game should result unless some of the men go to pieces.

G. C. W.

LOUISVILLE, KY.—There will be no chrysanthemum show here this fall, previous experiences not warranting the effort.

PARSONS, KAN.—R. G. Fergusson, recently shipped 400 bouquets to Vinita, Indian Territory, to be used as souvenirs at a millinery opening.

Bloomsburg, Pa.

If there is one thing that has impressed itself upon the mind of the writer during a recent call upon the genial J. L. Dillon, it was the thrifty, healthful and, for this season of the year, exceptionally fine appearance of his roses and carnations. I beheld two houses of Kaiserin that were simply superb, while the Brides, Bridesmaids and Perles were equally attractive. Nor could I find fault with his carnations. Their general appearance is all that could be desired, showing thrift, care and good treatment.

Mr. Dillon is experimenting upon a number of seedlings, some of which, notably a few white ones, look decidedly promising, stem, fragrance and size, the cardinal points, being excellent. Would he put them on the market? Not this season. First of all Mr. Dillon must have positive assurance that his seedlings are worthy from a commercial standpoint. Another thing that attracted my attention was his field of carnation plants. A field of 40,000 clean, bushy and healthy looking plants is a sight worth seeing. This branch of his business, including both rose and carnation plants, has proven profitable, the demand for his stock from various sections of the country having increased from year to year, the sales this season being far ahead of those of any previous one.

To the majority of the florists, Mr. Dillon is perhaps best known as the Verbena King. And right here it may not be amiss to remark that his verbena kingdom is in a most flourishing condition and will be heard from in due season. HOMO.

CHATHAM, N. Y.—The floral parade, in connection with the annual fair here was a magnificent spectacle. Many of the turnouts were very elaborately decorated with flowers and the display was witnessed by fully 18,000 people.

OF INTEREST TO FLORISTS **EVERGREEN TREES** FOR WINTER DECORATIONS

We are specially prepared to supply florists with Evergreens suitable for winter decorations, either for window boxes, tubs or pots. We recommend the dwarf varieties of Arborvitæs and Retinosporas where a small or medium growth only is desired, and tall-growing Arborvitæs where larger sizes are preferable; either size plants are of perfect form and well furnished to the base. We solicit your orders for these.

HOT WEATHER MAKES TROUBLE.—ROSES, CARNATIONS AND VIOLETS.—SHOW MATTERS.—VISITORS.

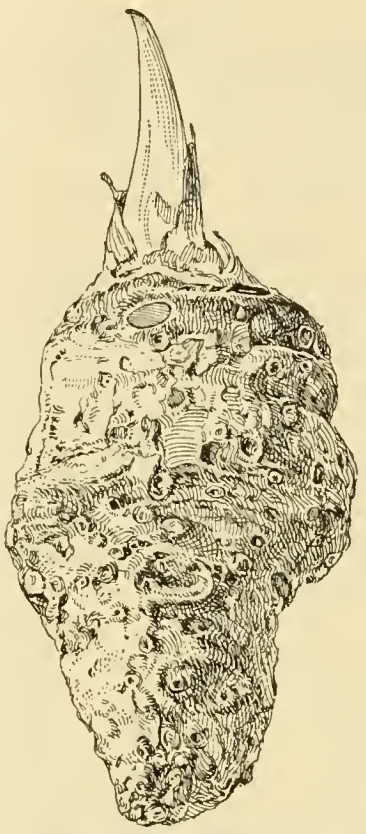
With weather as warm as in August, trade has not been rushing. Roses are coming in a little better each day. Carnations from some growers are very good, while others are of good color, but small.

The Florists' Club had another meeting last week pertaining to the flower show, which so far is progressing favorably. Weekly meetings will be held until after the show as there is quite a good deal of work given to the different committees.

Paul Berkowitz, Philadelphia, Joseph Rolker, New York, and J. F. Sullivan, Detroit, were callers last week, the latter getting promises from all to come to Detroit next August.

Violets made their appearance the other day. One lot were very fragrant, but looked as if they had malarial fever. However, they were able to be worn by a fair maiden who was escorted by a tall and graceful athlete in the trade who knows what is pretty both in flowers and the fair sex. W.

Helena, Mont.



"Busy as bees" is a term which seems applicable to the florists of this town. At Mrs. Mattie Miller's establishment, the Broadwater Greenhouses, everything is growing finely. Herman Miller has recently returned from the Klondike, and it is rumored he came back with a large sack. When questioned on this matter Mr. Miller was rather reticent, which led us to fancy he didn't want the assessor to know too much.

At the Wells' Conservatory, Mrs. Wells is in the midst of extensive repairs and improvements. For the first time in fifteen years hail has seriously damaged this establishment. The broken glass is being replaced and new bars are being put on where needed. One house has been demolished and is being rebuilt with different slope. The premises are being generally overhauled to be in good shape for winter.

Chas. Horn reports business good. He also suffered somewhat from the hailstorm early in September. One new carnation house is almost completed at this place and everything is being put in ship shape for the cold season. Mr. Horn grows some good Wootton and Kaiserin, also chrysanthemums.

The State Nursery Company is as usual holding its own. Building operations here were completed earlier than usual this season and they are consequently a little further ahead with fall work. Roses are producing their first crop and carnations are all inside. Thos. E. Mills, the president of the company, takes a good deal of pride in growing chrysanthemums although he says they hardly pay for the the amount of labor expended on them. He has about 3500 fine plants in pots, besides those bedded. Mr. Wilson has charge of the roses here, and it would be difficult to find a better looking lot. President Carnot is one of his favorites, besides which Beauty, Bride, Bridesmaid, Perle, Wootton and Meteor are grown. Glen Morris is the popular carnation grower and has charge of seven houses of these ever-in-demand flowers. Mr. Morris is also something of a sportsman, and in a recent visit he made to the Big Blackfoot country, he almost "cut a swath" through the game and fish.

A. J.

FAVORABLE CONDITIONS AT MINNESOTA'S CAPITAL.—BEAUTIES IN DEMAND.—CARNATION NOVELTIES TAKE WELL.—SWANSON'S WELL KEPT PLACE.—WITH OTHER GROWERS.

Trade is spasmodic, though gradually improving. Stock is fairly plentiful, with the demand about balancing the supply. Roses are improving daily in quality and quantity, the only notable shortage being reds. More and better Beauties are being cut than for some time past. The demand for them is increasing rapidly and one of of the best signs of the times is the willingness with which people buy Beauties at from $3 to $5 per dozen.

Carnations are coming in more freely and are ample for the demands. The newer varieties, as Triumph, Flora Hill, Bon Ton, Jubilee and Evelina, are prime favorites with flower buyers and are decided acquisitions. Daybreak still retains its hold, however, and we have yet to see a flower that for all around qualities can beat it. Chrysanthemums are appearing in limited quantities. Fitzwygram was the earliest variety to open here, Swanson and May & Co. both having them in some two weeks since. Violets are beginning to appear, though of poor quality and in meager quantities.

Building operations are about completed and show as large an increase in glass as usual. A. S. Swanson has built a house for Beauties 18x100. The glass used is 16x16, butted. The roof is three-quarter-span and the beds are solid. The plants were put in late in anticipation of a big crop for Christmas. He is growing more violets than usual this season and his plants in solid benches are very strong and vigorous. Charcoal distributed in the soil about the houses has a very beneficial effect. His chrysanthemums are all grown in sprays, three to six on a plant, quite a radical departure from past methods, his single stems in other years being the cynosure of all eyes. A bench of Boston ferns shows the rapid growing habit of that valuable plant and suggests the possibilities open to some of our smaller growers in that line. His place is practical and complete, now comprising about 30,000 feet of glass to which he adds each year.

L. L. May & Co. have just completed a cool house for azaleas, hybrid roses, bulbs and other spring flowering stock. The size of this building is 10x140. At their city store the past week a window of orchids caused much favorable comment. This firm has just received its fall importation of palms from Belgium and their conservatory 50x50 is literally a palm garden. The varieties most in evidence are arecas, latanias and kentias.

Carl Hangen has about 3000 violet plants, all in fine condition. Nearly all are of the Marie Louise variety. Some are in solid beds and some on benches, as he sees no particular advantage in either method. A house of roses, Perle, Bride, Bridesmaid and Testout, is in fine shape. His other stock consists of carnations, Scott and Daybreak being the principal varieties grown.

E. F. Lemke has completed and occupies his new store on West Sixth street. This adjoins his residence and is in the rear of his old place on Seventh street, which he still continues. FELIX.

WEBSTER, MASS.—Mrs. A. L. Converse is making a complete renovation of her greenhouse establishment. Additions are being made and new heating apparatus is being put in, at an expenditure altogether of about $2,000.

THE HARRISH DISEASE can be prevented by immersing the bulbs for ten hours in a half solution of 99 per cent. **KRAFT'S PLANT TONIC**

THIS has been conclusively proven by experiments at Lincoln Park, Chicago. The Tonic also kills Hard Shelled Scale, Mealy Bug, and other insect pests without injury to the plant. A trial of a 25 cent bottle will convince you that a really remarkable insecticide has been discovered. Send for circular.

THIS INSECTICIDE IS NON-POISONOUS.

Butte, Mont.

The State Nursery Company reports business fair for the warm season but this being their first year in Butte they are unable to make comparisons. They are now receiving all their flowers from their own greenhouses at Helena, and certainly have an advantage in shipping a short distance. Miss Anna Zweifel is the popular manager of their store at 47 West Broadway, and seems to be doing her share of the business of this bustling city. Miss Zweifel is an expert at designs and has such good taste that her work is easily recognizable from its originality and finish.

Law Bros. & Day are, as usual, very busy and report that they cannot grow enough flowers to supply the demand and always have to ship a lot to help them out. They have built two fine carnation houses this season, each 20x125 feet, and think this increase in their capacity will help them out a little. They are to have a fine new retail store built especially for them, which they say will eclipse everything of the kind between the Missouri river and the Pacific. This firm succeeded to the old established business of Mrs. Knox and they are wide awake business men.

The Silver Bow Floral Company has been offering its plant for sale, and several rumors have been circulated to the effect that the sale had been made, but they appear to have had no foundation. A. J.

City of Mexico.

A fine greenhouse has been erected in the Toluca Alameda. It is over 100 meters long and eighty meters wide and a very handsome structure, mostly of iron and glass. It will be filled with rare plants, a great number of which have already been donated. A handsome aviary has also been erected in the same place.

TRADE CONTINUES BRISKLY.—AMERICAN BEAUTIES ARE SCARCE.—JOTTINGS OF INTEREST.

The improvement noted last week is continuing and our wholesale houses report a good shipping trade. The demand for American Beauties is very brisk at present and at times a scarcity manifests itself.

B. P. Critchell's Sons had the decoration for the fall opening of McAlpin's big dry goods store October 4. Fifteen cases of wild smilax and several large wagon loads of decorative plants were used. In cut flowers they used 500 American Beauties and several thousand teas.

The Cincinnati Cut Flower Co., is receiving good stock of Beauties from the well known firms of George & Allen and W. Gray.

Of our growers Julius Peterson is first on the list this year with chrysanthemums, and a fine vase of Lady Fitzwygram adorns one of his show windows.

Miss May Underwood was quietly married to Cecil Plummer September 28, at the bride's home, Ludlow, Ky.

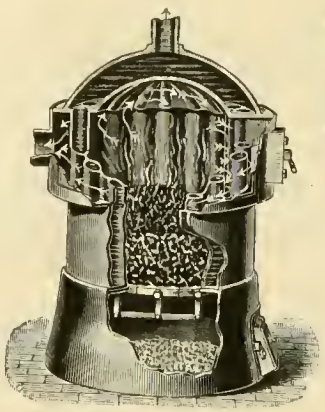
Fischer Bros. have started manufacturing flower pots and will be ready for fall trade.

H. SCHWARZ.

Worcester, Mass.

The weather we have been getting this last week has been phenomenal for this time of the year, the thermometer registering 82° in the shade on October 1, which is quite a different story from that of two weeks ago, when we had to start firing in the rose houses. Trade received a slight impetus from the Musical Festival held here last week and business in general is fairly satisfactory, although flowers of good quality are not plentiful as yet.

The weekly exhibitions of the Horticultural Society maintain their usual excellence in flowers, fruits and vegetables. They will continue during this month, and the chrysanthemum show is booked for November 8 and 9. The annual meeting of the society will be held November 2.



The warm fall has had a bad effect on the bulb trade, as the general public needs a couple of hard frosts to awaken it to the necessity of planting tulip and hyacinth beds before it is too late. This trade grows less every year, as people are planting more herbaceous stock.

A. H. L.

Grandville, Mich.

Business here is on the increase and all the indications point to both brisk demand and good stock for the winter trade. Large quantities of carnations have been grown here this summer and while the plants have, perhaps, not made as large a growth as might be desired they are of splendid vigor and promise to supply a profitable crop of blooms. One of the best things of the season is Silver Spray as grown by the Stover Floral Company. It is a surprise for those who affirm that this variety is a back number. Their carnations have all done exceptionally well with the possible exception of Wm. Scott which is not quite as large as their other sorts. Their chrysanthemums and violets are also very good.

BIRMINGHAM, ALA.—W. M. Lindsay has not the largest establishment in the business but there are none more thoroughly modern in all equipments. Mr. Lindsay reports trade in the south as excellent.

Providence, R. I.

It is very gratifying to have a more favorable report to make as to the condition of business. The principal craze at present seems to be for Nephrolepis Bostoniensis.

At the last meeting of the Florists' and Gardeners' Club the meeting night was changed to the second Thursday in each month. The meeting was well attended and the aster disease was discussed to some extent. Aster growing about here was not very satisfactory this season. James Hockey read a very instructive paper upon fern growing, handling the subject from the spore to the specimen plant, giving many valuable points from a life long experience.

The Rhode Island Horticultural Society held its annual outing on October 1, at Annawan Rock. About fifty members were present. There was diversity of entertainment, among other pleasing features being Miss Lillian Macrae's several meritorious recitations. On the whole it was a day well spent.

J. M. Sullivan, 1205 Westminster street, was recently the victim of the palm swindler, but many of the plants were recovered and Mr. Sullivan will not be at a very great loss.

Walter I. Hogg has returned much refreshed after his vacation.

VIOLETS.

VIOLET GROWING IN WISCONSIN.

It is within the past few years that the violet industry of Wisconsin has attained proportions to attract widespread attention, and to this day the culture of this profitable crop is confined, in the vicinity of Oconomowoc and Watertown, to three or four growers who possess the secret of right methods and are able to achieve results which warrant them in displacing roses and devoting their entire suitable bench room to this diminutive flower. The two growers whose perspicacity enabled them to comprehend the future of the violet and whose correct culture has done much to raise the flower in popular favor and bring their locality into prominence are Otto Sylvester, of Oconomowoc, and Loeffler Bros., of Watertown. August Schuenemann, of Oconomowoc, is also well to the front.

So well have these gentlemen grown the violet among the little lakes, so popular as summer resorts, that in both Chicago and Milwaukee the request of many purchasers is for Oconomowoc violets, and so frequent has this call been that it has tempted dealers to send out good flowers from other localities as the Simon-pure article. At last Easter one Chicago florist handled 6,000 of Sylvester's violets at excellent prices, and so well have the crops of recent seasons averaged that many growers are studying Oconomowoc methods and doing their best to reach an equally high standard.

Quite early in the investigation of the processes by which Oconomowoc violets reach their perfection it becomes evident that the results are largely due to the personal accomplishments of the successful men, for many growers of less experience and skill have embarked in violet culture there without attaining noteworthy results, but the natural conditions are such as to render much valuable assistance. The district is full of small lakes and springs, the hills are gravel and the low places of a sandy loam in which one need not dig far for water. Although the light surface appears to be as dry as most soils during the summer, there is a moisture beneath that prevents the roots from being parched and in fact causes them to grow deeper than is usual. Close observation has shown that the young plants which are set out the earliest in spring are the best, which is, no doubt, due to the fact that they make root before growth of top is caused by warmth.

Although the soil is fairly rich it requires a small quantity of fertilizer and with it makes a fine growth, but never rank. The plants make abundant roots, which lift without breaking. Mr. Loeffler lifts plants with a ball of root as large as the whole top. Eight plants laid on a flat are enough to carry in and plant on the bench at a time. Mr. Sylvester states that he usually cuts some of the roots off, many runners being started at this time. He cuts off all but the very strong ones, going over each plant as carefully as one does a chrysanthemum at disbudding. The soil for benches is mixed, using about one half from the field in which they are grown and the balance decayed sod, so that when the plants are set on the benches they have heavy roots with porous soil and fibre in which the young roots can easily penetrate, being insured air.

At the period of benching the tufts are close jointed and appear to have much stored energy with abundance of root to maintain any development which might be induced by future treatment. They are freely watered at first at both foliage and roots, but after the first danger of wilting is over, care is taken to keep the foliage dry and to see to it that when watering is done the soil is thoroughly moistened. A temperature of 40° to 45° is desirable. The manipulation of air appears to be a vital point. Mr. Sylvester noticed that violets in the larger houses did better after Christmas than those in the older and smaller houses. During the early part of the winter the difference was less marked. The larger houses are short-span-to-the-south and have three benches. Mr. Sylvester found that violets did much better on the north bench than on the south so that he now grows his carnations on the latter and finds the plan to work quite satisfactorily. He has just completed a range of three new houses which embody the many points he has ascertained by experience. They are even-span, run east and west, and have a double row of ventilators. The roofs are quite high so that the houses contain a large volume of air. The illustration on the next page shows one of these houses in which the center bed is freshly planted.

Mr. Sylvester does not favor taking up his plants until after cold weather, and he takes up all of an even size for one house and another size for the next and so on, not mixing them up. Mr. Loeffler prefers taking them up earlier, provided ventilation can be managed properly. He goes still further and says that they intend to arrange a new house next spring with ventilation so constructed as to permit of benching the young plants in spring. Mr. Sylvester's houses are 65 feet long and he picked 4900 blooms from one of his north benches in one day just before last Easter. He shipped 14,000

blooms that day. This winter he will have 35,000 feet of bench surface devoted to violets. Loeffler Bros. shipped 100,000 blooms last year from 2400 plants; they have 3000 plants this season. August Schuenemann has 1200 plants. Lewis Turner, of Kenosha, says he procured his stock one season of Loeffler Bros. and had much better success the first year and partly so the second, which tends to show that it would pay to have stock raised in this locality for blooming elsewhere.

C. B. W.

THE VIOLET DISEASE.

ED. AM. FLORIST:—The leaves of my violet plants are disfigured by small brown spots which gradually turn white and fall out. Please let me know the cause and what to do for it. SUBSCRIBER.

The violet leaf spot, Cercospora Violæ Sacc., as the common name suggests, causes the foliage to become more or less covered with circular spots. There are several fungi causing the spotting of violet leaves, but the cercospora can usually be detected by the dark center of the spot due to the multitude of spore-bearing threads that are brown colored. Black molds of various kinds often flourish upon the dead tissues of the spot and greatly change its appearance.

Another spotting of the violet leaves is caused by another fungus, namely, Phyllosticta Violæ Desm., of a quite different type from the one above mentioned. By the naked eye, when carefully inspected, the phyllosticta spots are seen to have no dark central area, but scattered over the brown spot are minute dark specks in which the spores are borne. The cercospora spot has the spores on minute aerial branches, but in the phyllosticta spot the spores are formed within flask-like bodies and ooze out of the open neck when mature. Similar to the phyllosticta are a number of other violet parasites, as Marsonia Violæ Sacc. Besides these there are some fungi which cause blotching of the leaf and a general collapse of the whole plant. For example, there is an anthracnose, gloeosporium, of the violet similar to the one mentioned upon the rose. There is a bacterial trouble also, so that the violets are fully supplied with fungus parasites.

The conditions which are provided for the best growth of greenhouse plants are those that favor the development of the fungus enemies. As a rule they thrive best with plenty of heat and moisture; therefore a greenhouse, other things remaining equal, will be the place where blights of all sorts may be expected. It is well known that the means of propagation is through the transfer of the fungus itself or its spores produced in countless numbers. The preventive measures are, first, to start new plants with healthy stock either from seed or slips free from the disease; second, to prevent the germs of decay from entering the healthy plants, and third, if they are present to check their growth as much as possible.

Strong healthy seed is a very important starting point, the necessity of which is not always fully realized, but this is not the time to dwell upon this fact. In like manner cuttings should be from the best possible stock. If the seed and the slips were healthy, the only point necessary for continued vigor would consist in keeping out the germs and surrounding the plants with the best conditions for growth. The latter the propagator is supposed to do. The germs enter from he soil or the air or both. Care should be exercised that the seed bed be germ free, and to this end the woodwork of the greenhouses needs to be fumigated and cleaned as frequently as possible. The soil is a ready receptacle for receiving spores and soon gets charged with them, therefore a frequent change of soil is important.

After everything has been done along a sanitary line for the good health of the plants, namely, the use of healthy seed in healthful surroundings, there are some matters that still may need attention. Fungicides have their place in the greenhouse as well as in the orchard and garden. There are a few germ destroyers that when properly used have paid handsomely.

MOOERN VIOLET HOUSE OF OTTO SYLVESTER, OCONOMOWOC, WIS.

In the Bordeaux mixture, freshly slaked stone lime is combined with sulphate of copper and applied as a thin wash with a spraying pump. The formula is five pounds each of the lime and sulphate of copper to fifty gallons of water. The milk of lime may be made up and kept in stock, to which the sulphate of copper, also kept in solution, may be added as desired for spraying. The chief objection to the use of Bordeaux mixture in the greenhouse is the bluish lime coating it gives to the plants. On this account cupram is better. The formula for this latter is five ounces of carbonate of copper dissolved in three quarts of strong (4 F) ammonia, to be afterward added to fifty gallons of water. A convenient way to keep this compound is in the concentrated solution in a well corked bottle. Thus a bottle holding the three quarts of ammonia can receive the five ounces of copper and stand ready for use, it being necessary only to pour out an ounce for each gallon of water used for spraying. These two fungicides are the chief ones that can be recommended for fungus troubles of the violet.

BYRON D. HALSTED.

CHATTANOOGA, TENN.—The new greenhouse at East Lake Park has been completed. It is 65x180 and affords ample room for the large collection of plants and accommodations for propagating bedding stock.

CARNATIONS.

CULTURAL NOTES.

October 15.—If your houses are all planted, the plants neatly tied up, and there are no weeds to be seen on the benches or beds, then you may consider yourself in pretty good shape for some time to come but if these things have not all been attended too you should make haste.

Another thing wanting attention now is the heating part of your establishment. See to it that everything is in smooth working order, ready for firing on short notice. There are usually a few nights during the month of October when firing is a necessity and they are liable to come very unexpectedly. I have said this before but it is so often overlooked that it will bear repeating. A good rule to follow for fall firing is to start the boiler whenever the temperature drops below 40° outdoors. If the houses get too warm with the fires going during such a night do not stop the heat; instead, put on a little ventilation and the results attained will more than pay you for the little inconvenience this irregular firing may cause you. It is not absolutely necessary that after you once start the fires they must be kept going all the time, no matter what the state of the weather, but it is well to bear in mind that after you have fired up for a few nights the plants will be more quickly injured by cold than before, and care must be used to see that they have heat on all cool nights afterward until regular firing begins.

Chrysanthemums are now asserting themselves and the carnation growers who look after their own best interests will not encourage a full crop of bloom on their carnations during the height of the chrysanthemum season. It is asserted by some that chrysanthemums are on the wane and possibly they are not quite so popular as they were a few years back, but if you expect to sell a heavy crop of carnations between now and November 20, and realize a fair price for them you are going to be very badly disappointed.

If your carnations are nicely started and are coming into bloom it will be necessary to do some topping to avoid a heavy crop and now is the time to do it. If it is done intelligently it can be done very quickly and be but a small item of expense. Go over the houses and cut out all but two or three of the best buds on each plant. These two or three that you leave should be in different stages of development so that they will come in for cutting at different times, but they should be the healthiest and most promising buds. Those that you cut off should be cut down to the first good vigorous side shoot on that branch. This topping is a matter that requires considerable skill and judgment to do it in such a manner that you will get the most benefit from it and should not be done by any but a good man or, better yet, by yourself.

There are a number of advantages to be derived by this method of culture, the chief of which is that you get during the chrysanthemum season all strictly first-class blooms which will find buyers, no matter what other flowers may be in the market, and buyers who are willing to pay a fair price. Aside from this you are, by reducing the flowers allowed on each plant to two or three, giving that plant more strength to produce a fair crop for the months of December and January than if you allowed all the buds to develop that are now coming on. Thus

you get a double benefit, first by having good salable flowers when the demand is slack and again by having better flowers and more of them when the demand is at its height.

In this topping of carnations in the houses you will, however, have to be careful that you do not overdo it and thus get your crop in a week or two too late. This can easily be regulated with a little attention to the quickness of a variety coming into bloom. There is no variety that will not be bettered by taking off all of the buds that are showing now excepting the few you want to leave for blooms. Some varieties will, however, want to be left alone after the first topping, while others that come quickly from a shoot into an open flower can be topped to advantage as late as November 1.

If you are in any doubt as to the wisdom of this doctrine try it with a small number of plants, and see if they do not make you more money for the same amount of ground by January 10, than do those left to take their own course.

At a meeting of the American Carnation Society, I think it was in Boston, several of the best growers said in reference to disbudding that the grower who did not disbud was no longer in the race and that they fully believed that the day was not far distant when the successful grower would not only disbud, but would cut and prune his plants as well, in order to throw additional size into his blooms and length and strength into their stems. I fully believe that day is not three years off from this season and that the man who practices this method now is going to be just a step or two ahead of his competitors in what promises to be an overcrowded market.

ALBERT M. HERR.

INDOOR CULTURE OF CARNATIONS.

Owing to the remodeling of five of our largest houses the past summer, we were unable to carry out our intention of growing our carnations inside the present season. It is, however, our firm conviction at the present time that the indoor culture has almost every point in its favor, and we believe that it is only in the most favorable seasons that carnations can be grown in the field and lifted in August and then compare favorably with the indoor stock which has met with no check, has been correctly watered, and has been shielded from sun and hot winds, as well as from the cold rains which often visit us late in the summer.

We believe that it is possible to grow carnations absolutely free from rust, as well as from most of the other diseases to which they are subject, by keeping them indoors, while it is impossible to do this with outdoor stock in unfavorable seasons. The sum of the whole argument is the one fact that the grower has an almost perfect control of the stock when planted in, while when planted out he is absolutely at the mercy of an adverse growing season. This does not imply that reckless, careless or slovenly indoor methods will produce good results. Your house must be airy, your soil properly mixed, cuttings good, and plants set early. You must have arrangements for abundant air, be willing to shade when necessary, to mulch during a long heated term; in fact you must be willing to give as much patient care and attention to your carnations as you have found by experience is necessary for your roses. The grower who does this will be repaid by his early crop of first quality bloom and will not have to see, with chagrin, valuable greenhouse space bringing no adequate return during the closing months of the year, and the Christmas crop frequently not making its appearance until late in January.

I know that there are a few good growers who, in favorable seasons, produce equally good results with outdoor stock. Their plants were set out early in April; they missed a serious and long-continued drought, growth was nicely completed when the plants were housed in August and the stock was in condition for producing bloom. But in the great majority of cases matters work in the opposite way; a late wet spring retards planting, conditions are not favorable to growth, and half matured plants are housed in September and occupy valuable room, making their growth at a time of the year when space means the most money, and for which they never make adequate return.

During the past summer it has been my privilege to see carnations grown inside that were pictures of health and of fine size; we really envied the owner, for they spoke of grand results in bloom at an early day. Fortunately for us Hoosiers, we have had a fine season for growth outdoors, the best in years, and carnations have lifted with hardly a check.

E. G. HILL.

PLANTS IN POTS.

Plants of medium size are best adapted for sale in pots, and the varieties of short, stocky growth are much the better for this purpose. Use 5-inch pots and a good, live, porous soil with a little sharp sand mixed in. Give the plants plenty of drainage and when potted remove all the discolored leaves. Stake them up at once; about the neatest way to tie up carnations in pots is to use one stake in the center of the plant and draw each shoot up to it with some very thin material, but do not bunch the plant too close, just enough to hold the shoots upright. After the plants are tied they should be shaded for a few days until the roots are started.

The proper place for them now is in a cold frame, where there is enough head room with free circulation of air to prevent damping of the foliage. They can remain here until severe weather sets in when they should have a place where the temperature is kept above the freezing point, that is if the plants are not all wanted for sale at the same time. To prepare the plants for sale place them in the regular carnation temperature of from 52° to 54° at night about ten weeks before the time they are wanted. Of course some varieties will come along much faster than others.

While being held in the cool house the plants should be very slightly dry but as soon as placed in a higher temperature they will require plenty of moisture and occasionally liquid manure. When a carnation plant is well grown with six or eight open flowers and plenty of buds it will meet with a ready sale, but such stock as we often see, tall, ill-formed plants, covered with yellow leaves, with a bursted flower or two, is enough to debar the carnation from usefulness as a market plant.

C. W. JOHNSON.

CHRYSANTHEMUMS.

NOTES ON VARIETIES.

Nyanza, planted June 20 from 2-inch pots, are at this date, October 11, three feet ten inches high. Terminal buds taken September 20. The accompanying cut gives a good idea of the advancement they have made. Georgiana Pitcher, planted the same date, four feet high, terminal buds taken September 20, are now showing color.

Geo. S. Kalb, Glory of Pacific and Marion Henderson, planted in open frames outside are nearly ready to cut. The same varieties under glass are showing considerable color, but will be ten days later. Among other early varieties Mme. F. Bergmann is nearing perfection and Harry Hurrell, Miss Gladys Vanderbilt (new) and Mrs. A. F. Wienold (new) are well along in color.

The names applied to the two cuts in last week's issue were transposed; Thornden should be Autumn Glory and vice versa.

ELMER D. SMITH.

CHRYSANTHEMUM NYANZA SECOND WEEK OF OCTOBER.

Begonia Cuttings.

ED. AM. FLORIST:—In making cuttings of flowering begonias, is it preferable to cut all such just below the joint, or is it a matter of indifference whether they are cut above or below the joint? X. Y. Z.

I think all gardeners instinctively cut just below the joint in making cuttings of flowering begonias, as well as most other soft-wooded plants. I should much prefer to have such cuttings, but in a case of shortness of stock I should not hesitate to cut to one eye, keeping the propagating bench on the dry side to prevent the rotting of the cuttings. C. E. HUNN.

In reply to the inquiry of "X. Y. Z." as to the best way to make cuttings of flowering begonias, I would say that, presuming he has reference to such species as B. insignis, B. rubra and B. Weltoniensis, those that are considered and spoken of as shrubby begonias, there is no doubt that it is essential to make cuttings with a joint for the base. The very succulent nature of their growth would indicate the necessity for so doing. Propagators all realize that while some cuttings, as in the case of coleus, will make roots from any portions of the stem, it is best on principle to cut all off at a joint, for many have the tendency to rot up to a joint and the decay does not always stop there, but takes the whole shoot if once it sets in or the conditions are not the best. Anyone who has made geranium cuttings will understand this. When a lad the instructions were to always take off the two stipules that occur at each joint, for if left on, it was said, decay was much more probable, and if not cut close below a joint it was inevitable. If the inquirer alludes to such as are called tuberous begonias, it is even more essential that a joint be left for a base, as this forms a callus, and this in turn changes with enlargement to a true tuber for the perpetuation of the kind.

E. O. ORPET.
